It Pays to Plant Bountiful Ridge Trees and Plants

We have often been asked by our competitors and some others why we devoted this entire page as we do each year with no possible return in cash value. Our reply invariably has been, "We consider this space one place where each year we can give to our many friends and prospective customers a personal message that cannot be given any other place in our catalogue and we hope the day never comes when business practices will become so hard boiled and dollar grabbing that we cannot take up space for a friendly greeting each year to our friends and customers throughout the United States and other countries who have stood by us loyally, placing their orders with us each year for their planting needs." This is plain put, but it is exactly how we feel here at Bountiful Ridge. It is our purpose at Bountiful Ridge to incorporate into every branch and phase of operation a personal touch and feeling that will create better understanding among our customers, us, and ourselves. In accomplishing this, then we know we are in a position to offer service and satisfaction to a maximum degree to everyone.

We are growing many millions of trees and plants each year but our production organization is not so large that we cannot know and give to each of our employees a friendly greeting when we meet them. Many of these men have been working with us at Bountiful Ridge for over 10 years. These men have been taught the vital importance of treating each task they are assigned with care and thoroughness. Our daily time sheets show where they work in our fields from day to day and these sheets are kept for references. Our most trusted employees are assigned to digging and grading stock and filling orders. Every man who packs an order is required to sign his name on packing house copy of the order and the man who packs the order must sign this same copy, filling in the date it is filled and packed, and this copy of your order with all necessary changes in grades and possible omissions on the order is filed for future reference. These records are kept for many years unless unavoidably destroyed, and we can refer back 10 or 12 years and tell you just how your order was handled. All this is done to give you efficient and satisfactory service and eliminate mistakes as far as it is humanly possible; and when mistakes are made, we want to know why they are made and who made them and not that they are not made again.

It is with pride that we note orders coming to us each year from our old customers, many of whom have planted trees grown by us 10, or 20, or even 30 years ago. Their letters spur us on to greater effort to produce better stock and give better service each succeeding year. We know we cannot please everyone. This cannot be done by anyone, but we are certainly going to try to please you; and if a misunderstanding does arise between you and us, we hope you don't nurse your grievance. It cannot be corrected that way. There is a common meeting ground in all misunderstandings. Usually it is adjusted very easily if we know about it and that is what we want to do. We are trying to do everything we can here at Bountiful Ridge to take THE CHANCE OUT OF PLANTING NURSERY STOCK, but all nursery stock is of a perishable nature and is affected so vitally by so many different elements that it is sometimes hard to account for the behavior of trees and plants; and to have good success requires the cooperation of all parties concerned and placing the blame where it belongs and then cooperating to correct the trouble so it will not happen again. We are putting at your disposal all the experience we have gained from growing and handling plants for over 80 years. We are adding to our product equipment the most modern practical machines available. We are adding technical equipment to our fact-finding department so as to be able to always give you authentic information about varieties, their behavior, and identifying characteristics. Our cultural directions now available on most all fruits and berries and our spray recommendations and production practices are the results of scientific findings and we are confident they will tend toward better success with your plantings.

No one can ever learn all there is to be known about living trees and plants; and with increased problems arising from new insect pests and diseases, every planter should more and more carefully select the nursery from whom they will buy their trees and know that that nursery is on the job. It is vital for the protection of your new plantings and your older plantings because infected stock or stock purchased from an affected area without rigid inspection by competent authorities can jeopardize your entire plantings and possibly the production of these fruits in your whole community. Apparent savings at planting time can often lead to stunning losses in a few years. All these are definite reasons why there should always be closer cooperation between the nurseryman and the planter. Treat your nurseryman as you would your Family Doctor; and if your nurseryman is sincere in his efforts to serve you to your best interest, he will protect you and give you his benefits to be had by improved fruits, changing production methods and scientific findings. Simply, as producing nurserymen through three generations, we make our complete catalogue for 1941; and as nurserymen, we rest our case in your hands and, after going through our catalogue carefully, we hope the verdict will be "Your definite decisions to purchase all your planting needs from Bountiful Ridge this year and the years to come."
WHY IT PAYS TO PLANT BOUNTIFUL

Our Own Bud Wood and Testing Orchard

We point with pride to the enviable record Bountiful Ridge growers of trees and plants have established in fruiting true to variety. This is one of the Nurserymen’s greatest problems and few if any Nurserymen have made a closer study of variety characteristics of different species than have we here at Bountiful Ridge. Our long production experience and constant study of different types, has given us knowledge of varieties that can be gained in no other way. We realize how essential this practical experience is where a Nursery such as Bountiful Ridge is producing Hundreds of Thousands of fruit trees and Millions of best plants each year. Our every thought and purpose is to eliminate mistakes in Bountiful Ridge Grown Trees and Plants, in addition to our own exacting care and inspections we call in—

THE BEST KNOWN AUTHORITIES IN THE WORLD ON IDENTIFYING FRUIT VARIETIES BY LEAF AND GROWTH CHARACTERISTICS:

to go over our growing stock each year. Dr. Shaw, Dr. French, Dr. Robert of the Mass. Agri. College and Dr. Upshall of the Vineland, Ontario, Canada Station are cooperating in these yearly inspections of our stock. This would seem enough, but we go further in our united efforts to give you the exact variety you buy from Bountiful Ridge:

WE HAVE ESTABLISHED OUR OWN BUD WOOD AND TESTING ORCHARD OF PEACH VARIETIES

We now have nearly 100 varieties planted in this orchard. Every tree definitely charted and definite data kept on the trees behavior as well as blossom and fruit types, bloom and ripening periods, relative resistance to winter temperatures and spring frosts, their resistance to the more common peach insect and fungus diseases and general behavior.

DEPARTMENT OF RESEARCH

Our department of research under the direction of Homer S. Kemp and Dr. Geo. W. Colborn, Jr., reaches into every phase of Tree and Plant production as well as Orchard Practices, finding and evaluating new and improved fruits. This branch of our service takes us into almost every fruit producing section, traveling thousands of miles each year, calling upon hundreds of fruit and nursery growers as well as the experimental Stations and various experimental stations of the U. S. D. A. From these visits we gather information and the findings of the most competent growers and horticulturists in the U. S. We can observe new fruits, varied and new practices in the hope of making them available to our clients.

We are endeavoring to make our nursery and our test orchards proving grounds for many of our findings, often giving our patrons the benefits of this research work years in advance of other sources. Rest assured New Varieties and new practices will be passed on to you only after thorough study and proven practical value.

LOCATION AND PRODUCTION METHODS

The Delmarva Peninsula is fast becoming known as the greatest nursery center of the East because of its very favorable climatic conditions and varied soils. We often have temperatures ranging down to 10 degrees below zero during the winter months and our frost starts in early October to properly come out on growing stock, our killing frost usually coming the last week in October or the first week in November. Statistics show we have an average yearly temperature of 50 degrees Fahrenheit at Atlantic City, 60 degrees Fahrenheit at Baltimore, 70 degrees Fahrenheit at Philadelphia, and 80 degrees Fahrenheit at Hartford, Conn. However, our summer growing seasons are so favorable that it enables us to produce maximum growth with a minimum of fertilization. Our soil varies from a rich chocolate loam, where our deeper rooted plants and trees are grown to the lighter sandy soils, where our shallow rooted trees and asparagus roots are grown. Our water table is very close to the surface and we are seldom affected by severe droughts. With this combination of soil and climatic conditions, we know of no other sections that can produce nursery stock with so uniform a growth from year to year.

WITH OVER 75 YEARS NURSERY PRODUCTION EXPERIENCE IN THE KEMP FAMILY, WE ARE TO JOY COME THE LATEST KNOWLEDGE WITH IMPROVED PRODUCTION METHODS.

(Continued on page 3)

Mr. Mont Smith, York, Penna. proudly displays the results he had from Bountiful Ridge plants bought spring 1910. Healthy, vigorous plants, withstood severe droughts after planting and produced heavy fruiting beds. This means added profits to him.

We Devote our Full Time to Producing and Selling the Trees and Plants We Offer You.
RIDGE GROWN TREES AND PLANTS
Made to Order Fruit Trees
CUSTOM GRAFTING ON GENUINE VIRGINIA CRAB STOCK AND OTHER APPROVED STOCKS OF YOUR SELECTION

Recent years has proven that many of our better commercial varieties of apple have weak bodies that causes the leaves of the tree to wither and become soft. Many of our small spindly trees are a result of this condition. Several fruit research men have recommended made to order fruit trees on certain varieties under certain conditions. This service we are offering our customers is in response to these recommendations.

Large nursery trees are ready to grow you trees the way you want them grown—the varieties you want grown—when you want them grown—and offer you personalized service you cannot secure from any other nursery. We invite your correspondence.

to deliver them nursery stock which is healthy. This is another Bountiful Ridge service we are proud to render.

Personalized Advisory Service

Hundreds of growers all over the nation take advantage of our free advisory service which is conducted for our customers in connection with the Research Department:

Our library of subjects include: planting, cultural directions, spraying, pruning, soil testing, cover crops with relation to soil building, fertilization, adaptation and fruit identification.

The information given out on these subjects is the results obtained from our own observation and experience as well as U. S. D. A. and State Experiment investigators.

Individual problems, many times need special treatment which we are always glad to render with the hope it will prove helpful in every way. We invite your correspondence.

Triple Inspection Service

Mr. Geo. W. Kemp, General Manager, Homer S. and Edgar H. Kemp, Assistant Managers all live on our main Nursery Farm. They personally supervise all Nursery operations. They are constantly inspecting the growing Nursery stock, always on the alert for possible fungus and insect infections. They supervise all bud wood cutting to eliminate possible distribution of infectious diseases. Our personal supervision extends to the digging, grading and packing periods to note possible root infections. Our State maintains competent full time field inspectors for the strawberry plant industry of our section going over growing fields from 3 to 5 times each year for possible infections of Crimp, Root Nematode, Red Steel Root Rot and other plant diseases. All Strawberry plant shipments carry special Strawberry plant certificate. Our Raspberry plants are inspected three times during growing and digging periods. A competent Federal inspector is maintained at our Nursery during shipping periods to inspect all stock going outside of the infected Japanese Beetle area.

"NOTHING IS LEFT UNDONE HERE AT BOUNTIFUL RIDGE TO PROTECT THE FUTURE LIFE AND SUCCESS OF OUR TREES AND PLANTS SHIPPED TO OUR CUSTOMERS."

Spraying Nursery Stock

Although our nursery is many miles from any commercial orchard, yet we practice a complete spraying of all stock, from the tender shoot to the matured tree or plant. The orchardist, more than ever before in history, is confronted with new hazards from disease and insects which were unknown only a few years ago, and in order to do our part to bring him clean healthy disease free stock, we employ timely spray and dusting programs to cover the various seasonal conditions and use special formula designed for nursery stock. Again during the past several years, we have purchased the most practical up-to-date spraying and dusting equipment known to science. All this is done because we feel that it is an obligation we owe to our customers.

Our new specially designed Nursery Sprayer at work on young growing stock.

Odds and Modern Machinery, and Our Favorable Soil and Climatic Conditions to Produce the Best Stock It Is Possible to Grow.

Few nurseries can point to such a winning combination as we have here at Bountiful Ridge. These combined factors enable us to produce stock that will adapt itself to various soil and climatic conditions wherever it is planted, and given to the planter producing fields that are living examples of the superiority of Bountiful Ridge trees and plants. All nursery stock is of perishable nature and is vitally affected by the manner in which it is handled, by the producing nursery, the transporting carrier and the planter, as well as soil, moisture and general climatic conditions. Growing and producing fields in every section of the United States attest to the fact:

PROPERLY GROWN BOUNTIFUL RIDGE STOCK PLUS YOUR COOPERATION, BRINGS YOU MAXIMUM RESULTS FROM YOUR PLANTINGS YEAR AFTER YEAR.

"WHEN BETTER TREES AND PLANTS ARE GROWN, BOUNTIFUL RIDGE WILL GROW THEM."

Good Trees + Good Care—Satisfaction

Golden Jubilee 5 years old. Trees grown by Bountiful Ridge Nurseries. Bore a good crop at 3 years old, heavy at 4, heavier still at 5 years. I have bought all my peach trees I have planted from Bountiful Ridge Nurseries and am absolutely pleased with all of them.

Wm. Tomlinson, Dover, Delaware
WHY IT PAYS TO PLANT BOUNTIFUL RIDGE GROWN TREES AND PLANTS

Our Own Bud Wood and Testing Orchard

We point with pride to the enviable record Bountiful Ridge has established in fruiting trees in variety. This is one of the nurseryman's greatest problems and one we have been able to overcome through the combined efforts of our entire staff. We have had no success with standard planting systems, and have found, through years of experience, that if you want to grow a fruiting tree, you must start with the right bud wood. We have selected, and will continue to refine, the varieties that will give you the best possible results.

THE BEST KNOWN AUTHORITIES IN THE WORLD ON IDENTIFYING FRUIT VARIETIES BY LEAF AND GROWTH CHARACTERISTICS-

We have made it our practice to identify all our fruiting trees by leaf and growth characteristics. This has enabled us to maintain a pure stock of fruiting trees, which is essential to the success of any nursery.

PHOTOGRAPHIC RECORDS OF BLOSSOMS AND FRUITS OF EACH VARIETY ARE MADE IN COLONIAL SUNRISE, SUPERIOR STRAINS OF VARIETIES WHICH MEANS-HEAVIER YIELD-LESS DISEASE-RESISTANCE-MORE RAPID GROWTH-THRIFTIER TREES AND BETTER GENERAL SATISFACTION TO EVERY PLANTER.

These records enable us to identify the various varieties, and to ensure that each plant is of the variety it is supposed to be. This is essential in maintaining the purity of our stock.

LOCATION AND PRODUCTION METHODS

The Delmarva Peninsula is fast becoming known as the grove planting and orchard area of the East because of its very favorable climatic conditions and varied soils. We have found that our nursery stock will grow well even in the cold winter of our area, and that the spring fruiting season is much longer than in other parts of the country.

With over 50 years of experience in the nursery business, we are well equipped to advise you on the best varieties to plant in your area, and to help you with your planting and care.

Mr. Mont Smith, Vanc. Penna, proudly displays the results he has had from Bountiful Ridge plants brought back to his farm last year. He started with a small planting of Bountiful Ridge trees in his orchard, and has since increased his planting to over 500 trees. He states that these trees have produced a good yield of fruit, and that he is very satisfied with the results.

There are No "Side-Lines" at Bountiful Ridge - We Should and Can Serve You Better.

Good Trees + Good Care = Satisfaction

Golden Jubilee 85c each, grower's size, 5 to 10 feet high, 30 to 50 per box, quality grown by Bountiful Ridge Nurseries. Bountiful Ridge Nurseries is an independent nursery, specializing in the production of nurseries and nurseries for the home and garden.

ARE YOU PLANTING THE BEST?
RECENT INTRODUCTIONS OF NEW OUTSTANDING VARIETIES TO MEET MODERN DAY DEMANDS

WRIXPARENT
(U. S. PLANT PATENT NO. 388)

THE KING OF ALL EARLY APPLES

1940 REGISTERED THE HIGHEST PRICES IN RECENT YEARS ON EARLY APPLES

Plant To Maintain Your Early Apple Production. Lead the Season With Wrixparent and Lodi

You will find a color reproduction of the WRIXPARENT from Kodachrome natural Color Photograph on the outside cover page of this catalogue. The picture was taken June 18, 1939, at Magnolia, Delaware, at which time a handsome and profitable crop of fruit was being picked from Mr. McIlvain's WRIXPARENT orchards.

Found as a chance seedling in the Yellow Transparent orchard of Mr. Wrixham McIlvain near Magnolia, Delaware about 1920.

Mr. McIlvain after several years observation determined the variety to be superior in every way to the Transparent and grafted over his Transparent orchard to this variety. This 2nd generation orchard now 17 years of age has been producing heavy crops for 15 years. A 3rd generation orchard was planted in 1935 and began bearing at 4 years of age. The tree is more spreading than Transparent, vigorous and hardy in wood not being subject to blight and other fungus diseases. The fruit averages large in size being a little more flat in shape than Transparent and packing out commercial sizes of 2½" and 2¾" at picking time. The Wrixparent ripens from 10 to 15 days before the yellow Transparent and ripens its fruit evenly so that the entire crop may be harvested in two pickings if desired. It is an attractive light green color without markings; the flesh is white, crisp, sprightly, very fine in texture and does not bruise readily or turn dark after bruising. Sub-acid in flavor and unsurpassed as a cooking apple. The fruit keeps well and can be held for 10 to 15 days after picking without storage. The Wrixparent is an annual bearer and continues to bear large fruits on the older trees.

Brief Facts About The Wrixparent
1. EARLINESS—Ripens 10 to 15 days before Yellow Transparent.
2. ANNUAL BEARER—Normal to heavy crops each year.
3. LARGE SIZE—Apples under normal conditions pack out 2½" and 2¾" size and up.
4. QUALITY—Culled as an early cooking apple.
5. SHIPPING ABILITY—Does not show bruises, will carry to distant markets, and will keep for weeks.
6. TREE IS VIGOROUS, SEMI-SPREADING GROWTH HABITS, BLIGHT RESISTANT, COMES INTO BEARING EARLY.

This Is A New Bountiful Ridge Introduction and Cannot Be Purchased From Any Other Nursery. Warning: This is a patented variety and cannot be propagated for any purpose by anyone other than the Bountiful Ridge Nurseries.

Our Supply of Trees Is Very Limited For Spring 1941 Delivery. Prices of Wrixparent Are 10c Per Tree More Than Other Standard Trees Listed On The Following Pages In All Grades.
Are Highest In Quality—Earliest To Bear—Greatest In Value

**BLAXTAYMAN**

TRADE MARK REG. U.S. PAT. OFF.

**APPLE**

The Glorified Staymans

NO OTHER STAYMANS TYPE IS QUITE SO BEAUTIFUL

THE BLAXTAYMAN SURPASSES ALL OTHER IMPROVED STRAINS OF THE STAYMANS BY ITS APPEALING, BRILLIANT, CHERRY RED COLOR

1940 PROVES A BANNER YEAR FOR THIS GREAT APPLE.

ITS FRUITING RECORD HAS ESTABLISHED THE BLAXTAYMAN GENERALLY AS ONE OF AMERICA'S FOREMOST COMMERCIAL APPLES. A REAL LEADER AMONG NEW FRUITS.

Each year as new plantings of Blaxtayman come into fruiting and older plantings continue to bear heavy crops of brilliant red apples surpassing the fondest expectations of the planters you can hear orchardist proclaiming this great apple. A large apple buyer viewing a 7 year old Blaxtayman orchard near Bridgeville, Delaware, remarked: "THIS IS THE MOST BEAUTIFUL CROP OF STAYMANS TYPE APPLE I HAVE EVER SEEN. THIS SHOULD BE THE GROWERS ANSWER TO THE OLD STAYMANS." Blaxtayman Staymans. Many Blaxtayman trees are producing apples at 3 years of age after planting in the orchard and at six years are producing heavy yields.

The BLAXTAYMAN was introduced to the Eastern Fruit Growers, spring of 1930. In the BLAXTAYMAN we have every characteristic of the famous staymans apple with the exception that THE FRUIT COLORS A BEAUTIFUL SOLID RED. The fruit is equally as large or larger than the regular Staymans. The fruit is equally as thrifty as the regular Staymans. The apple has a SLIGHTLY TOUGHER SKIN WHICH TENDS TO MAKE IT KEEP BETTER IN STORAGE AND CARRY BETTER TO THE MARKETS. THE APPLE HAS THE SAME SHAPE AS THE OLD STAYMANS. THE FLESH IS FINER TEXTURE AND MORE MILD IN FLAVOR WHEN GROWN AT LOWER ELEVATIONS THAN THE OLD STAYMANS. Because of its Earlier Coloring and Solid Red Color the grower can pick the fruit earlier if desired and seek the early export markets with one of the best quality apples now in cultivation. The BLAXTAYMAN will not get a dark and unattractive color if allowed to remain on the tree but instead the apples become more brilliant and beautiful.

---

Mr. Emory F. Thomas of Martinsburg, W. Va. is rightfully proud of his 3 yr. old Blaxtayman trees secured from Bountiful Ridge. Mr. Thomas states: All my new plantings in Staymans type apples is "Blaxtayman" I find them superior in every way to the old Staymans.

---

**RICHARED**

TRADE MARK REG. U.S. PAT. OFF.

THE DELICIOUS supreme

IT HAS SUCCESSFULLY TRAVELED THE EXPERIMENTAL ROAD

YEAR AFTER YEAR THE RICHARED DELICIOUS IS GENERALLY RECOGNIZED AND TRULY PROVING TO BE "THE DELICIOUS SUPREME".

Introduced to the Eastern Fruit growers in 1928 the RICHARED today is generally recognized as the best of the improved types of the Delicious apple; wherever it is producing it has the approval of the grower. There are many so called red variations of the Delicious apple being offered today but EVERY PLANTER SHOULD KNOW DEFINITELY WHAT TYPE RED DELICIOUS HE IS PLANTING. THE RICHARED DELICIOUS IS NOW FRUITING FROM COAST TO COAST AND IS A TRADE MARKED VARIETY THAT CANNOT BE SECURED FROM EVERY NURSERY. CAN YOU AFFORD TO GAMBLE THE FUTURE OF YOUR ORCHARD BY PLANTING JUST A RISK DELICIOUS, IS NOW WHAT YOU ARE PLANTING BY BUYING RICHARED DELICIOUS FROM BOUNTIFUL RIDGE NURSERIES.

The RICHARED DELICIOUS is a blood red mutation of the Famous Delicious Apple that promises to revolutionize the growing of Delicious apples. No orchardist can overlook these facts about the RICHARED. You have a tree of the same hardy characteristics as the old Delicious, producing an apple with that same appetizing delicious flavor, producing an apple that colors a full bright red, without a trace of stripe, on every part of the tree, the same apples as the regular Delicious, but the color is richer and while the regular Delicious, thus enabling everyone who grows it to eliminate the loss from drop apples, to pick earlier, to market earlier, if he desires to do so, to seek a foreign market with a high quality apple that has superior carrying qualities when picked early and to keep it longer in storage for our late markets if desired.

The higher prices received for the fruit of the improved strains of the Delicious apple prove that the grower can "CASH IN ON AMERICA'S MOST POPULAR APPLE WITH THE RICHARED DELICIOUS" and you should plant this year for the future markets when quality and beauty of fruit will prevail. Note above our new low price plan on Richard Delicious.

PLAN TO PLANT THIS YEAR WITH BOUNTIFUL RIDGE GROWN RICHARED TREES.
The “COLORA” Red York

Granted Plant Patent No. 168 March 10, 1936

THE “COLORA” RED YORK MARKS A NEW ERA FOR THE GREAT YORK IMPERIAL APPLE

Earlier Coloring - Earlier Picking - 100% Color Greater Profits to the Grower

TREES GROWN AND FOR SALE EXCLUSIVELY BY BOUNTIFUL RIDGE NURSERIES

1941 PRICES ON “COLORA RED YORK” ARE ONLY 5c A TREE HIGHER ON ALL GRADES THAN STANDARD VARIETIES LISTED ON PAGE 7.

We say without hesitation that the “COLORA RED YORK” bids fair to become the most important apple introduced to the fruit growers of the York Imperial producing areas in many years. The “COLORA RED YORK” should and will revolutionize the production of the York Imperial type apple, giving to the growers a fruit that will color 100% over the entire tree under most any condition. The “COLORA RED YORK” can be picked from one to two weeks earlier than the regular York Imperial if desired and the entire crop can be picked at one picking if desired with every apple passing U. S. No. 1 for color and enabling the grower to pack out a Fancy Grade of Apples.

The tree of the COLORA RED YORK has the same rugged characteristics as the old type York Imperial and as the younger stock grows in the Nursery seems to be more thrifty. The variety has been well tested and even though we have observed other variations from the old fashioned York we do not know of any today that will give the grower the same attractive York type apple that the COLORA RED YORK will produce. The original tree stands in the orchard of Mr. Harry W. Miller, Paw Paw, W. Va., and will be sold by us in the Spring.

The tree of the COLORA RED YORK has the same rugged characteristics as the old type York Imperial and as the younger stock grows in the Nursery seems to be more thrifty. Note—We can supply large 3 yr. old COLORA Red York Trees ideal for replants or where an extra large tree is wanted at the same price as 2 yr. 5-6 ft. trees. Please specify.

BOUNTIFUL STRAIN

IMPROVED WINESAP

A Glorified Bud Selected Strain of the Famous Winesap Now Comes to the Planter With the same Beautiful Color—Same Quality—Same Keeping Ability

12 CONSECUTIVE HEAVY CROPS FROM ORIGINAL TREE

28 bu. in 1939—70% 2¼” and up size. A record never before equalled by the old winesap type apple.

Martins Mountain orchard and which when investigated proved to be more than he claimed and without question the finest type of Winesap apple ever to come under our observation.

The original tree stands in a block of the Regular Stayman Winesap and has not failed to produce a heavy crop now for 12 consecutive years, producing 28 bu. in 1939, the fruits being as large or larger some years than the regular Stayman on adjacent trees.

The tree has every characteristic of the Old Winesap in shape, color, quality and growth habits and at harvest time Miller has been able to pack most of the apples in the 2½” up size, the balance going into the 2¼” grade. The tree is a typical Winesap tree in growth having the exact leaf marking of the Old Winesap. The Miller Bros. are better known as the “Pioneer Orchardists of West Virginia” and are producing more apples than any other individual or family group in the State today. We are proud that approximately 70% of their producing orchards are trees we grew for them. They are known almost nationally as authorities on fruit production and varieties. It is fitting that such improved and nationally known Winesap apple should originate in their orchards. We know this will revive planting interest in the fruit. We have a fine lot both one and two year trees of this IMPROVED WINESAP this year and WE ARE SELLING THESE TREES AT NO ADDITIONAL COST TO THE PLANTER.

Prices of Improved Winesap same as other standard varieties. Prices on page 7.

NOTE—Unless otherwise stated can supply varieties in both One and Two Year Trees.

WRIXPARENT (1)  See description and prices on page 4.

CRIMSON BEAUTY (2)  Originated in Maine.  Very hardy, strong grower and very productive; extremely early bearer, ripens very early. A handsome red apple. Flesh sub-acid, pleasant to eat out-of-hand. 1 yr. trees only.

YELLOW TRANSPARENT (2A)  HOLDS A LONG RECORD AS AN EARLY MONEY-MAKER.  OUR MOST WIDELY PLANTED EARLY COMMERCIAL APPLE.

Tree grows upright, hardy, early bearer. Fruit good size, skin clear, white to pale yellow in color. Flavor very good. Is an excellent cooking apple known to the housewife everywhere. Ripens early July. Used widely for pollination purposes.

THE NEW "CLOSE" APPLE (2B)  A PRODUCT OF THE U. S. D. A. BUREAU OF PLANT INDUSTRY DEVELOPED BY PROF. C. F. CLOSE

This variety tested as U. S. D. A. No. 57, ripens with or slightly ahead of the Yellow Transparent. It appears to adapt itself over a wide growing area. The fruit is medium to large size averaging 2%", fair to good quality, suitable for both dessert and cooking. The fruit develops a bright, attractive color when full ripe but when grown for the large commercial markets would have to be picked with ¼ to ½ color. It seems to stand high summer temperatures well, thereby making it desirable in early apple producing areas of the South. The tree is vigorous, productive annual bearer and comes into fruiting while the trees are young. This variety has outstanding promise as an EARLY RED APPLE ADAPTED TO BOTH HOME AND COMMERCIAL ORCHARD PLANTINGS.

Our trees are limited this year and can only offer 1 year trees. 5c extra per tree on prices listed above.

This is to state that we have examined for true-
ess-to-name all the saleable apple, pear, cherry, and plum stock of Bountiful Ridge Nurseries, near Prin-
cess Anne, Maryland, and as they now stand in the nursery row all varieties are, to the best of our
knowledge and belief true-to-name.

A. P. French, Prof. of Pomology

Have A Reputation Backed By Over 75 Years Production Experience
THE LODI APPLE—Photograph of Lodi apple on tree in experimental orchard of University of Md. summer of 1938. Note size and uniform shape.

LODI (3)
The Lodi after being tested over quite a large area is now proving one of our most worthy Early Apples. It is of Transparent type only much larger and more firm. The tree is more spreading and vigorous and bears more regular than Transparent. It should be interplanted for cross pollination. It ripens a few days later than Transparent but is large and can be picked with Transparent if desired. We ask no additional price for Lodi.

ANOKA (3a) One of Prof. Hansen’s hybrids and noteworthy for its beautiful red striped fruit and early bearing, often producing apples the second year after planting. This apple comes to us highly recommended. Fruit good quality: ripening shortly after the Transparent. It is worthy of trial. It should be more adapted to the central and northern districts than to the eastern seaboard fruit sections. We can supply 1 yr. trees only.

WILLIAM’S EARLY RED (3b) Among the earliest to ripen and the largest of all early apples, a better name for it is “Big Red Apple”. Flesh is white, juicy and slightly tart, tender and crisp. A very good one, like Transparent, bears heavily on young trees.

EARLY HARVEST (Yellow Harvest) (4) Medium to large; pale yellow; beautiful; fine flavor. Tree moderate, erect grower, good bearer. 1 yr. trees only.

EARLY McINTOSH (4A)
LEADS THE PARADE OF THE McINTOSH TYPES HAS SIZE—BEAUTY—QUALITY WELL ADAPTED TO COMMERCIAL MARKETS ONE OF THE BEST OF OUR EARLY APPLES
A McIntosh Hybrid being almost red in color, very crisp and juicy, with the same high quality as the well-known McIntosh. A thrifty grower and a regular bearer. Your opportunity to have the McIntosh type as a very early apple. Cash in on the popularity of the McIntosh by growing Early McIntosh for your markets.

DUCHESS OF OLDENBERG (4b) Vigorous growth: large; striped; tender, juicy, sub-acid; good: regular and abundant bearer. One of the hardiest kinds known.

STARR (4c) One of the finest early apples grown in New Jersey. Can be picked over a long period of time; large and of a fine yellowish color; a great bearer and valuable market variety; comes into fruiting very young.

NO ROOM FOR IMPROVEMENT
Mt. Vermont, Ohio, October 16, 1910

Gentlemen:
The fine young trees came in good condition yesterday and have been planted. I was especially pleased with the very fine painstaking job of packing that had been done. Surely no one could improve on it.

W. E. Bentrager

MONMOUTH BEAUTY (5)
LARGE SIZE—BEAUTY—COOKING MERITS
MAKE IT A FAVORITE FOR MANY GROWERS
Introduced by us in 1925 and is one of our finest summer apples. Tree very hardy, fruit large: well colored, excellent for cooking or eating. It excels all others during its season. Requires cross pollination for best results.

MELBA (5a) A real McIntosh in quality and appearances only more flat in shape. Ripening just after early McIntosh. Of Canadian origin. Tree vigorous and productive. 1 yr. trees only.

RED GRAVENSTINE (5b) This favorite of many years as a summer apple of fine quality and shipping ability is now offered as a Red variety as compared with a white one. It bears flat, red or yellowish red, with slightly yellow flesh, fine quality. Tree vigorous and productive. Ripens somewhat irregular and should be picked several times.

MILTON (6) Typical McIntosh, coloring full red; very good quality, about equal to McIntosh, being same textured apple. Tree hardly and vigorous. Ripens three to four weeks before McIntosh or just before Wealthy.

RED WARRIOR (6A) Meets every demand for a mid-summer apple. It’s beautiful all-over bright red color, large size, excellent quality and shipping ability should make it a leader for its season.
The tree is normally vigorous, grows naturally well formed similar to McIntosh, and bears regularly. The fruit is large to very large, many apples being four inches or better but normally averaging better than three inches. The skin is smooth and colored a brilliant red from stem to calyx without stripe. The flesh is white and fine texture and does not bruise easily. Its ripening season is about with Wealthy or a little earlier. It is sub-acid in flavor and is an excellent cooking apple. The apple is shaped nearly like a Staymans, being a little longer from calyx to stem.

WEALTHY (7) This beautiful, moderate sized, very juicy, crisp, and flavorful appleyellow color, one of the best of its season. It is a relatively good keeper, and owing to the hardiness of the tree, its adaptability to cold climates and early bearing habits, it can be profitable as a filler.

Mr. Geo. W. Kemp, General Manager of our Nursery admiring some Bountiful Ridge Grown Gallia Beauty trees.

2 year old BOUNTIFUL RIDGE GROWN APPLE TREES OF UNEXCELLED QUALITY such as these await your call to service at Bountiful Ridge Nurseries. Grown with exacting care, propagated from selected heavy producing strains these trees must and will give QUICK AND SATISFACTORY RESULTS.
Our Trees Are Superior For Rapid Growth, Hardiness And Heavy Production

The Famous McIntosh Apple Proves Supreme In The Northern Fruit Growing Areas

Thru scientific cross breeding and careful selection of bud mutations we now offer a McIntosh type apple covering the entire harvesting period and other improved strains and types of the regular McIntosh that should have your immediate consideration. They can be grown over a wider area than the regular McIntosh and mean greater profits to the planters. Follow our offerings closely.

THE FAMOUS MCINTOSH RED APPLE

SUMMER RAMBO (7a) Large, flat, streaked red and yellow; very tender, juicy and fine flavored. Tree an upright grower, hardy and productive.

GLENTON (8)

A WORTHY COMMERCIAL VARIETY WITH A FUTURE

BEAUTY—QUALITY AND SEASON RECOMMEND IT SHOULD BE MORE WIDELY PLANTED

A seedling of the Northern Spy originating at the Canadian Experimental Station. A new apple ripening with and just after Wealthy. The trees are vigorous, nicely shaped and annual bearers. The apples are medium to large, highly colored with attractive red and good quality for either cooking or eating. We first observed the Glenton in the Ohio Experimental Orchards at Wooster. The beauty, quality and season of the apple were such that we felt it held real commercial possibilities. It should prove valuable as a good quality red apple to precede the McIntosh season.

LOBO (9) Same season as the McIntosh, larger apple, and colors a more full red than the regular McIntosh. Extra good quality. Tree equal to McIntosh. Comes recommended highly to replace the regular McIntosh for the Middle Atlantic and Southern growers.

IMP. ALL RED McINTOSH (10)

(BOUNTIFUL STRAIN)

ADDED BEAUTY TO A FAMOUS APPLE

EARLIER COLORING—SOLID RED—FANCY FRUITS

A special selected strain of the famous McIntosh apple, coloring a solid red without a trace of stripe. Without question this is the finest type of McIntosh that has come to our attention and will say that if you are not getting sufficient color on your present plantings of McIntosh you should make your new plantings of this Improved Type this year. We can supply these in both one and two year old trees.

McINTOSH (10A)

LEADS ALL OTHER VARIETIES IN PRODUCTION AND PROFITS IN NORTHERN APPLE AREAS

A choice variety of the Famuse type. The tree is long lived, bears young and annually. Fruit above medium to large, highly perfumed, almost covered with brilliant crimson, flesh snow white, crisp, very tender, slightly aromatic, sub-acid; high quality. A very beautiful apple. Ranks as one of the greatest general purpose, home and commercial varieties ever introduced.

KENDALL (10b) Of all the McIntosh seedlings originated at the Geneva Station, Kendall, the last one to be introduced, is by far the most attractive. It is handsomely covered over the entire surface with dark red covered with a rich bloom. It has attracted more attention from fruit growers than any other new apple. Its season is about that of McIntosh, but it keeps a little longer. The apples are large, trim in outline, and possess the whitish, fine-grained flesh of the McIntosh. Kendall is much the same but more sprightly than that of McIntosh. The apples hang better than McIntosh but not as well as Cortland. Kendall promises to be the “apple of apples” in the McIntosh season.

LAWFAM (10c) A product of the Central Experimental Farm, Ottawa, Canada. The Lawfam is the result of an actual cross between the Lawyer and Famense. The tree has proven very hardy. It is a very heavy yielder and the fruit is very uniform and regular in shape. The apples are very highly colored and hang well to the tree. Apparently the Lawfam have overcome the greatest weakness of the McIntosh apple in that it hangs well to the tree. The fruit of the Lawfam is particularly crisp and juicy, being mild in flavor. It keeps well in to the Early Spring months and we believe that this variety will lengthen the marketing period of the Famous McIntosh apple considerably. It is certainly worthy of a trial planting in any section. The Regular McIntosh Apple can be produced successfully.

CORTLAND (10D)

Noted for its Vigorousness and Productiveness, A McIntosh Type for Central Apple Areas. Popular for Interplanting and Pollination.

Cortland is an improved late McIntosh type. The fruits of the two varieties are similar, but those of Cortland are more oblate, average larger, and are more uniform in size; they have more color and the red is lighter and brighter and the stripings and splashes are laid on differerently; the taste of Cortland can hardly be distinguished from that of McIntosh; the flesh is firmer but just as juicy; the apples do not drop so readily and ship better.

Ohio Nonpareil (Red Bellflower) (10e)

We relist this old variety in response to many requests from Ohio fruit growers. High dessert quality and fine appearance is responsible for its popularity. The tree is medium in size and spreading in type. Fruit medium to large, round oblate in shape. Skin is yellow overspread with red-mottled and striped with bright red. Flesh yellow firm, crisp, tender, juicy and aromatic. Sub-acid in flavor. This fine old apple is hard to equal where quality is the factor.

SMOKE HOUSE (11) Comes into bearing moderately young. It has a thin skin of yellow, striped with rather a dull red, and is very attractive.

THE CORTLAND APPLE

The CORTLAND apple becomes more and more popular on the large commercial markets each year. Its great beauty, unique quality, and unparalleled producing record for young trees and its adaptation over wide fruit growing areas will undoubtedly make the CORTLAND one of our most popular and profitable fall apples. No planting in the Central and Northern fruit sections is complete without a liberal planting of CORTLAND.
The Jonathan Apple, grown in apple districts from coast to coast has stood the test of time and ranks today as one of the best and most dependable general purpose apples. A general favorite of its season on both our domestic and foreign markets.

**Improved All Red Jonathan (11a)**

**HIGHER COLOR ADDS TO POPULARITY OF THIS FAVORITE OF THE CENTRAL AND NORTHERN APPLE DISTRICTS**

A special bud selected strain of the famous Jonathan apple. We hunted a good while before we found what we considered the right type of Improved Jonathan apples to offer our customers. We have a fine lot at this time to sell and if you are not getting enough color on your Jonathan plant this improved strain and you will be well satisfied with the results. Can supply in both one and two year old trees. Not as well adapted to pollination purposes as the regular Jonathan.

**JONATHAN (11b)**

**ONE OF OUR REALLY GREAT COMMERCIAL APPLES**

**PRODUCTIVENESS, QUALITY PLACES IT FIRST AMONG APPLES OF ITS SEASON ADAPTED TO HOME, DOMESTIC AND FOREIGN MARKETS**

The Jonathan is justly one of our greatest commercial apples. It is hard to equal for hardness and productiveness. The apples smooth and attractively colored being medium in size. The flesh is firm, crisp, tender, juicy, good quality. An excellent cooking or eating apple. Used extensively as a filler and pollination variety. It is especially adapted to the Central and Northern fruit districts. No commercial orchard of the North is complete without the Jonathan for a late fall apple.

**Grimes Golden (11c)**

An apple of the highest quality. It is one of the fancy dessert apples and ranks with Delicious and Jonathan on the market. Medium to large; bright yellow with pink cheek; flesh fine grained, juicy, with a very pleasing apple flavor. The tree is hardy, grows upright, and is quite disease resistant. Highly recommended and widely planted to pollinize self-sterile varieties.

**Twenty Ounce (12a)**

**FRUIT EXCEPTIONALLY LARGE, JUICY AND CRISP, SUB-ACID, COLOR GREEN WITH SLIGHT BLUSH AND RED STRIPE. TREE THRIFTY AND VERY PRODUCTIVE, GENERALLY RECOGNIZED AS OUR BEST SUMMER BAKING APPLE.**

**Opalescencent (12a)**

Very large, brilliant dark red all over. Tree bears young and very prolific. Average quality.

**Northwestern Greening (12b)**

Tree vigorous grower, quite hardy. Fruit large to very large; green, becoming yellowish-green when ripe; flesh yellow, fine grained, size and firm; flavor good, sub-acid; very smooth and attractive.

**Tolman Sweet (12c)**

Medium, pale yellow, slightly tinged with red; firm, rich and very sweet; the most valuable baking apple; vigorous, hardy and productive.

**Yellow Delicious (13)**

**BOUNTIFUL STRAIN**

**ITS UNIQUE QUALITY—EARLY AND CONSISTENT HEAVY BEARING HABITS AND BEAUTIFUL GOLDEN COLOR GIVES THIS APPLES ADDED POPULARITY EACH YEAR. ESPECIALLY ADAPTED TO ROAD STAND MARKETS**

This apple has received almost national publicity during the last few years and is famous for its unique quality, involving a combination of flavors which is hard to equal. This, combined with the fine, firm textured flesh of the apple and the beautiful, golden yellow skin at once attracts the eye of the consuming public. The tree, while not a large growing type, is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young. We are offering this splendid apple to our customers at the same price as other varieties listed in our General Catalog. This apple should be picked at just the right period and placed in cold storage for late winter use.

**Macoun (13a)**

Very highly colored, having no blemish. Same quality as Mcintosh, same textured fruit, but a better keeper than the tree better. This is an improved Mcintosh, and ripens two to three weeks after Cortland. Trees are equal to McIntosh, a regular bearer and strongly recommended to lengthen the McIntosh season and give the Middle Atlantic and Southern growers a McIntosh type fruit they can grow successfully.

**Richard Delicious (13b)**

See full description page 5.

**Delicious (14)**

**BOUNTIFUL STRAIN**

**THE MOST POPULAR APPLE OF ALL TIME PRODUCING IN EVERY FRUIT SECTION OF THE WORLD.**

**ITS EXQUISITE FLAVOR AND AROMA IS KNOWN TO EVERY CONSUMER.**

A remarkable variety introduced to the West several years ago, where it is being largely planted and rapidly taking first rank both for commercial and home orchards. Fruit varieties included in list of notables are: DELICIOUS, one of the best, being large and very attractive, having a golden ground color overlaid with a beautiful solid red. Recommended by The New York Fruit Growing Association as an apple to prolong the Delicious season. Our supply is limited.

**Orleans (14b)**

A product of the New York Experiment Station of the Delicious type. Same season as Delicious, but only a little better keeper in common storage. The flavor, however, is more sprightly, resembling that of the Stayman's. Stock very limited.

**Rhode Island Greening (15)**

Fruit large and handsome, smooth, dark green over-pigmented with yellow. Flesh tender, juicy, with a bouquet of aromatic flavor. Rich, aromatic, mild sub-acid. Keeps through winter and late into spring.

**Northern Spy (15a)**

Large, roundish-conical, often flattened. Slightly ribbed; handsomely striped with yellow, dark red and yellow. Very rich, aromatic, mild sub-acid, fine. Keeps through winter and late into spring.

**Red Northern Spy (15b)**

Red Spy is typical Northern Spy apple except in color. The Red Spy colors a solid bright red without either stripes or splashes. If you desire more color in your Spy apples plant the Red Northern Spy.

**Turlry (16)**

The Turlry is a wingseed seedling originating in the experimental orchard of Mr. Burton in New Jersey. This hardy, vigorous, flavorful apple is gaining in popularity as it comes into fruiting more generally and has many points to recommend it as a profitable commercial variety. The trees resemble those of the old Staymans, are vigorous and productive. The skin is smooth and colors a bright attractive red.
Wherever Planted They Have An Enviable Record.

Almost over the entire apple. The flesh is firm, similar to Stayman’s Winesap; but cannot be classified as a high dessert apple being superior to Rome Beauty. The value of the apple lies in its handsome appearance, large size, the fact that it is Stayman’s type and will not crack at the stem and that it is a good cooking and baking apple. As an early winter variety it should have the consideration of the planters.

**THE TURLEY APPLE**

Albemarle or Newton Pippin (16a)

Large, smooth skinned, beautifully colored yellow apple that usually brings the highest market price. Can only be grown successfully in certain sections of the country, principally in Virginia and New York in the eastern United States. Greatly in demand and productive. Our trees propagated direct from orchards in Virginia.

**COLORA RED YORK** (17) See full description on page 6.

**YORK IMPERIAL** (17a) This is fine, large, red winter apple. It succeeds over a wide range of country. Comes into bearing at four years from planting, bears regularly and heavily. The foliage and fruit are remarkably free from scab. The fruit is of medium size, skin yellow and almost wholly covered with two shades of red.

**BLAXTAYMAN** (18) See full description on page 5.

**STAYMANS WINESAP** (18a)

Without question the most profitable apple ever grown in the fruit producing areas of the Central States. Tree vigorous, hardy, spreading. An early bearer and very productive. Fruit medium to large size, round approaching conic; skin smooth, slightly striped, coloring to dull red; flesh yellow, firm, tender, juicy, rich, sub-acid, aromatic; quality the very best. A splendid late keeping variety.

**GALLIA BEAUTY** (19b)

The Growers’ Choice Where It Is Producing

It leads all other Red Rome Beauty type apples. It can rightfully be called “One of America’s Most Beautiful Apples”. Demand the Gallia Beauty when planting the Red Rome type apple.

The Gallia Beauty originated in Ohio and is a typical Rome type tree, being thrifty, hardy and productive. The fruit of the Gallia Beauty colors a brilliant bright red, without stripe and seems to be of higher quality than the regular Rome Beauty, and keeps exceptionally well in storage. The Gallia Beauty will size up equal to the regular Rome but many of the other inferior so-called Red Rome types will not size up satisfactorily and again we urge you to plant only the Genuine Gallia Beauty. We offer you the best and challenge you to try more.

**ROME BEAUTY** (18e) Keeps in good condition till May and June. Large, round, mottled, and striped in various shades of red; flavor and quality away above the average; appearance and size are its valuable points; always sells above the average prices.

**WINTER BANANA** (19) Fine, vigorous grower; large healthy foliage; early bearer. Fruit medium to large, smooth and handsome golden yellow, usually shaded with red blush; flesh fine-grained, rich, sub-acid, aromatic; highest quality.

**BALDWIN (19a)**

Once the Pride of the New England orchards. Sets the pace on our Northern Apple Markets.

The orchardists of today should plant to supply these market demands. No variety yields larger crops or bears shipment better or is more attractive in color, size and shape than the Baldwin. It is esteemed as an eating apple and for cooking. For a commercial orchard it can be relied upon. Large, bright red, crisp, juicy and rich; tree vigorous, upright and productive. Keeps until April. Inferior strains and improper fertilization programs are largely responsible for winter injury to Baldwin orchards in recent years. Plant the TRUE BALDWIN OF OLD DAYS AND ALWAYS USE A WELL BALANCED FERTILIZER ON YOUR TREES, PRACTICE LATE FALL FERTILIZER APPLICATIONS AND YOU CAN CONTINUE TO GROW BALDWIN WITH EVERY ASSURANCE OF SUCCESS.

**RED CANADA** (Steele’s Red) (20) This apple probably originated in New England where it has been extensively planted. In recent years the variety has gained much favor in central North West, particularly in Michigan and Wis. The tree is medium to large, vigorous and upright in growth. The fruit medium to large, uniform in size and shape, colored to a fine red stripe on a background of yellow. Flesh is yellow, firm, crisp, aromatic and juicy, pleasing sub-acid in flavor. There seems to be improved types of Red Canada and we have selected our propagating wood from producing trees of superior merit in Central Michigan. The variety also seems to give better results if top grafted on some other sturdy variety so all trees we offer this year are top grafted trees in the Nursery row on a thrifty growing intermediate stock. This is done at no additional cost to our patrons.

**PARAGON** (21) One of the best of the long-keeled apples. A late variety. Does well on almost any soil; thrifty grower and fruits early; bears regular; is of the Winsap type, good quality; coloring a deep dull red almost all over; flesh slightly yellow.

**MAMMOTH BLACK TWIG** (21a)

Exceeds Winesap in nearly every important point; better grower, harder, and the fruit much larger; color even a darker red; flesh firmer; flavor milder, but full and equal. A long keeper.

**WINESAP** (21b) Winesap is one of the most widely distributed and best known American apples. It can be found thriving on both the Atlantic and Pacific seaboards. The trees are thrifty, hardy, young and regular bearers where given proper cross pollination. The apple is of medium size, dark red color, firm and juicy. Ranks as one of the best dessert apples and without question is one of the highest quality late winter apples now in cultivation which demands the highest prices on our domestic and foreign markets. It has been a favorite since Colonial days and the orchardist of today cannot afford to overlook the planting of Winesap for the future markets when quality will be a dominating factor.

**Bountiful Strain Imp. Winesap** (21e)

See description on page 6.
CRAB APPLES

Prices Same as All Standard Apple Trees

**HYSL** Season September to October; tree vigorous and hardy. Fruit medium; yellow ground with heavy shadings of deep crimson and splashes of maroon with heavy blue bloom. Flesh fine, firm, yellow, astrigent. Bears abundantly. In clusters which make tree exceedingly ornamental.

**TRANSCENDENT** Season September; Fruit medium; color bright red or brownish-yellow with blush of carmine; flesh firm and crisp, yellowish, fine-grained, very juicy, acid. Tree is a vigorous grower. Hardy.

**DOLGA** A handsome Red Crab apple of medium size. The fruit jellies easily and makes rich, ruby red jelly. Tree hardy, vigorous, productive.

**DWARF TREE APPLES**

Dwarf fruit trees of various types serve a dual purpose to the planter where planting space is limited. Dwarf apple and pear, also quince, sour cherry, peach, and plum are generally considered dwarf types of trees and make a splendid home selection of fruits. They bear extremely well and produce fruit of the highest quality. Our supply of dwarf apple is very limited this year.

We can supply the following Dwarf Apple this year:

Yellow Transparent, Lodi, Early McIntosh, McIntosh, Yellow Delicious.

Sturdy 2 yr. 4-5 ft. trees, $1.00 each; 3 for $2.75; 5 for $5.30; 10 for $8.25.

**Bountiful Ridge Extra Large All-Purpose Trees**

Ideal For Orchard Replants - Quick Pollination - Home Plantings

Heavy Rooted Early Bearing Specimen Trees

We offer the grower this year what we term our ALL PURPOSE TREES which are especially grown to produce a heavy crop of fruits with very sturdy trunks and branched tops. These trees are not less than six feet in height and from two to four years in age.

We recommend these trees for REPLANTING IN EXISTING ORCHARDS WHERE QUICK RESULTS ARE DESIRED, also on our apple FOR INARCH WORK to lend support and give vitality to trees which have been blown over or injured through low winter temperatures and quick additional feeder roots are desirable. BOUNTIFUL RIDGE ALL-PURPOSE TREES will be found invaluable for planting in orchards where quick cross pollination is desired. MANY OF THE VARIETIES OFFERED ARE CATEGORIZED UNDER BLOOD BUDS. Such varieties as YELLOW TRANSPARENT, JONATHAN, YELLOW DELICIOUS, CORTLAND, and MANY OTHER RECOGNIZED VARIETIES FOR POLLENIZATION PURPOSES CAN BE GOTTEN IN OUR ALL-PURPOSE TREES WHICH WILL RAPIDLY CORRECT POLLENIZATION STUMPS.

These trees are ideal for the small planter who desires quick results from a home orchard and where there is only room for a few trees to be planted. WE STRONGLY RECOMMEND THESE BOUNTIFUL RIDGE ALL-PURPOSE TREES FOR ANY PURPOSE WHERE A HEAVY CALIPER, LARGE TOP, AND EXTRA HEAVY ROOTED TREE IS DESIRED.

We list the following apple varieties in the large ALL-PURPOSE TREES, which are listed in the order of ripening:

**OUR LOW PRICES ON THESE SUPERB TREES WILL APPEAL TO EVERY PLANTER**

A close study of apple varieties reveals that some have weak bodies which are subject to collar rot, winter injury, etc. and that this can be largely corrected if they are double worked on other intermediate stocks. These types have generally been approved for this work as well as using some of our best known common apple varieties. Caution should always be exercised in determining, if possible, that your varieties and types are compatible with each other. Much is to be learned about this yet and research work continues relentlessly to have complete data on this available for the grower. We ask that you consult your experimental station or write to us for information. The Virginia and Hibernal Crab trees we offer are ALL GROWN SO THEY ARE LARGELY ON THEIR OWN ROOTS; THE FRENCH CRAB TREES ARE ENTIRELY ON THEIR OWN ROOTS. VIRGINIA CRAB: This type is selected from thousands of various wild crab types, is extremely vigorous and hardy, is resistant to low temperatures and the more common root rots. It is very vigorous having wide angle limbs and unusually strong wide open area. Pollination compatible with most apple varieties than other varieties listed. This hardy, medium sized tree produces fruit of the highest quality. WE CAN SUPPLY THESE IN BOTH ONE AND TWO YEAR TREES AT SAME PRICE AS OTHER APPLE VARIETIES LISTED ON PAGE 7.

**HIBERNAL CRAB:** This type is selected from thousands of various wild crab types, is extremely vigorous and hardy, is resistant to disease. Not quite as vigorous as Virginia Crab but will work some times when Virginia will not. Hibernal Crab also has very strong wide open angle limbs and crotches.

**FRENCH CRAB:** This is the common apple seedling that has been used in propagating apple trees for generations and has proven more congenial to our entire apple variety listings than any other seedling available. It generally succeeds as a root stock wherever it is planted and apple trees can be grown. The results are generally uniform. We can supply these with 2 year old strong roots and one year tops in the following sizes and prices:
Bountiful Ridge Grown Peach Trees Are Better

FACTS ESTABLISH THEIR LEADERSHIP IN GROWTH
ADAPTABILITY—PRODUCTIVENESS

These statements of Successful Growers prove the wis- 
dom of planting Bountiful Ridge Peach Trees.

2000 TREES BRING EXPRESSION OF SATISFACTION

Photograph to the right shows Mr. Emory F. Thomas, Martins- 
burg, W. Va. standing beside tree in his young peach orchard 
of 2000 trees.

Mr. Thomas states: "My Bountiful Ridge Peach trees have 
made a wonderful growth and I am very proud of them and 
don't believe there is an orchard anywhere can beat them, tree 
for tree."

His orchard is a fine example of the adaptability of Bountiful 
Ridge Peach Trees to varied soil and climatic conditions. Re-
sults such as this prove the superiority of Bountiful Ridge 
Grown Stock when given proper care.

400 TREES GREAT SUCCESS

Weatherford, Tex., Feb. 14, 1940

Dear Sirs:
The 400 Golden Jubilee peach trees that I bought from you in 
December 1936 are all living—did not lose a single one, although 
they were badly damaged last April and again in May by hail. 
Fruit completely destroyed.—T. L. Bloom.

SAYS STOCK IS WELL FORMED AND STURDY

East St. Louis, Ill., April 17, 1939

Dear Sirs:
I am very well pleased with the peach trees. They surely are 
well formed and sturdy trees for only 2-3 ft. Last year the 
Colora peach trees were also very well formed and sturdy.
Nelson A. Chartrand

Bountiful Ridge Grown Trees Absolutely Please

Photograph at left shows young orchard of Mr. Wm. Tomlinson. Dover, 
Del. Mr. Tomlinson writes, "I have 
bought all my peach trees from Bountiful 
Ridge Nurseries and am absolutely 
pleased with all of them. Picture shows 
3 year old Gage Elberta which produced 
a crop of 1/2 bushel to the tree at 2 years 
of age." This is a splendid example of 
proper orchard care and demonstrates 
what can be done when Bountiful Ridge 
Grown trees are planted.

TREES BEST HE EVER SAW

Westminster, Md., March 4, 1940

Dear Sirs:
The Peach and Apple trees I bought 
from you certainly are the best I ever 
saw. The Peach trees, 3 yrs. old, 1939 
were loaded so full of fruit, some of 
them broke down.—Jacob J. Gahl.

Mr. Tomlinson's Gage Elberta 3 Year Old Trees

BOUNTIFUL RIDGE TREES BEST IN 
30 YEARS PLANTING

Picture at right shows Mr. A. J. Gano, orchard man-
ger, standing in the young peach orchard of Mr. 
George Walters, Martinsburg, W. Va. This orchard 
planted in spring of 1929 and photographed in September 
1940. Note the strong, vigorous growth and size 
of trees. Mr. Gano stated: "In more than thirty years 
experience as an orchardist I have never had better re-
sults and I am absolutely convinced it pays to plant 
the best." (Note: These trees were 1 year, 5 to 6 foot 
grade.) Thrifty—Hardy—Dependable planting stock is 
the first step to success. Plant Bountiful Ridge Grown 
Peach Trees.

KANSAS MAN SAYS
"BEST TREES EVER PURCHASED"

Wichita, Kans., April 26, 1940

I am writing you in regards to the 1000 trees I got 
from you. I must say that they were the finest trees 
ever got from any nursery in my time, and I have 
seen many thousands of trees, and the trees came through 
in fine shape. They just looked like they had been 
dug up fresh from the ground. I showed them to some 
of my neighbors, and they said they never saw a finer 
tree than they were. They just could not be any finer, 
and those Cherry trees are the greatest trees I ever 
set in my life. Thanking you for your prompt ship-
ment and your fine quality of trees.—W. Booker.
We Present

"The Bountiful Peach World"

for 1941

In a Succession of Recent Outstanding Introductions in Addition to the Old Popular Varieties Which Have Proved Their Superiority and Ability to Produce Profitable Crops

Each Succeeding Year Proves the Wisdom of Following Closely Bountiful Ridge Listings and Recommendations

Never in the History of the Peach Industry Has the Grower Had Such an Outstanding List of Varieties to Select From Which Are Adapted to All Producing Sections—A Peach For Every Section—A Peach For Every Purpose.

THE STORY OF "BOUNTFUL RIDGE GROWN" PEACH TREES IS KNOWN IN PRACTICALLY EVERY FRUIT SECTION OF NORTH AMERICA.

PURCHASE YOUR TREES THIS YEAR FROM A NURSERY THAT IS ALERT TO THE FUTURE DEMAND AND IS GROWING TREES AND VARIETIES THAT ARE PROVING SUPERIOR WHEREVER PLANTED.

The Fisher Peach Is Hardy
—Medium to Large Size—Highly Colored With Handsome Appearance, Superb Quality and Shipping Ability.

Growers In All Peach Producing Areas Can Realize Its Possibilities. Step Up Your Yellow Peach Season By Planting Fisher Peach Trees This Year. Ripens 5 to 10 Days Before Golden Jubilee.

SEE COLOR ILLUSTRATION OF THE FISHER PEACH OUTSIDE BACK COVER PAGE.

HISTORY OF FISHER PEACH

The FISHER peach was discovered as a bud sport of the VALIANT in August 1934 near Greensboro, North Carolina. Mr. Fisher found these large well formed peaches growing on a single limb of a Valiant tree in his orchard, being attracted to the peach from the fact that it was ripening fully 3 weeks before the Valiant peaches on the rest of the tree. Realizing the commercial possibilities of a peach of this type and season, Mr. Fisher's next concern was whether the fruit would carry through to succeeding generations. To test it as quickly as possible he top worked a two year old Valiant tree with 12 buds from the Sport limb the first week in September, 1934. The Parent limb again bore a heavy crop in 1935 and the peaches developed as they did in 1934. The Parent limb repeated with a fine crop in 1936 and the top worked tree set a crop which required thinning, the remaining peaches on the top worked tree developed exactly as those on the Parent Limb.

To gather first hand information of this phenomenal peach Mr. Geo. W. Kemp and Homer S. Kemp made special trips to Canada during the ripening period of this peach in 1937 and 1938, observing the peaches on the original tree and on the second and third generation trees. The original limb and top worked trees had fine crops both years. We photographed the fruits in colors also fruits of Marigold, Orioled, and Golden Jubilee produced in the same orchard so as to have DEFINITE COMPARATIVE RIPEING DATA AND GENERAL CHARACTERISTICS. THIS DATA AND OBSERVATIONS IN OUR OWN TEST ORCHARDS IN 1940 DEFINITELY ESTABLISH THE FISHER PEACH AS RIPENING 5 TO 10 DAYS BEFORE THE GOLDEN JUBILEE, VARIES ACCORDING TO SOIL AND SEASONAL CONDITIONS.

Observations of the FISHER PEACH on fruiting trees in the TEST Orchards of the Bountiful Ridge Nurseries near Princess Anne in 1940.

We are pleased to say that about 80 trees of the Fisher peach planted March, 1938, in our test orchard have given us some interesting data on this peach which we pass on to you.

The trees had a light bloom set. The blossoms opened medium to late and were not affected materially by snow and sleet storm of April 12, followed by temperatures of 25 degrees. Fruit set well in proportion to blossoms. Fruit withstood the severe hail storm hitting this orchard May 27. The fruit on these young trees has sized up well, many peaches being 3 inches or better in diameter. The tree is growing vigorous, foliage somewhat subject to Bacteriosis. Fruit seems fairly resistant to Bacteriosis. Picked first soft ripe peaches July 18, general picking July 27 to Aug. 3. Were still harvesting Red Bird, Greensboro and Early Rose when Fisher started. Fisher cleaned up before starting Golden Jubilee.

Fruit averaged large, were very highly colored and very attractive and most excellent quality. The flesh of the peach is a clear yellow showing no red at all even about the pit. Some trees showed the fruit to be perfectly freestone, fruit from others cling to the pit. We experienced some extreme high temperatures from July 20 to 29 which ripened peaches very fast, many fruits showing the effects, and this in part may account for some fruits clinging to the pit. Fruits were very high quality, somewhat more acid than Jubilee or Early Elberta, not so much as some types Elberta. From observations this year in this orchard you can expect the fruits to cling to the pit while trees are young in many cases but we are confident as your tree settles down to real production at about 5 years of age the fruits will be freestone. These are the facts friends. We believe after trial you will find it to be one of the fine peaches preceding the Golden Jubilee season and we recommend it especially for eastern and northern districts.

THE BOUNTIFUL RIDGE NURSERIES HAVE ENTERED INTO A GROWING AND DISTRIBUTION CONTRACT WITH MR. FISHER FOR THE DISTRIBUTION OF THE FISHER PEACH TO THEIR CUSTOMERS IN THE UNITED STATES AND CANADA.

WARNING! The Fisher peach is a patented variety which cannot be propagated for any purpose by anyone other than the authorized growers and distributors.

ERLY-RED-FRE
U.S. PLANT PATENT NUMBER 330

America's Earliest Free-stone Peach

Introduced, Grown and For Sale Exclusively by Bountiful Ridge Nurseries.

Acclaimed "The Marvel of Early Peaches"

As Erly-Red-Freer trees are fruited all the way from the southern areas into the far northern peach districts we have these enthusiastic statements from growers and others observing and testing the fruits and trees. Read what they say.

TEXAS—I believe you have the GREATEST EARLY PEACH IN EXISTENCE.

ALABAMA—I know of no Early peach that can compare with the ERLY-RED-FRE.

NORTH CAROLINA—The ERLY-RED-FRE came through fine this year. Its SEASON and fine quality SHOULD MAKE IT THE GREATEST PEACH FOR THE SOUTHERN GROWER EVER INTRODUCED.

SOUTH CAROLINA—All you have said about the ERLY-RED-FRE is true and you haven't told half the story.

VIRGINIA—Our ERLY-RED-FRE ripens as early as Red Bird, fruits just as large or larger and beautifully colored.

MICHIGAN—YOU HAVE A GREAT PEACH, WE KNOW OF NO PEACH TO EQUAL IT FOR ITS SEASON.

NEW JERSEY—Our Erly-Red-Freer trees bore a few peaches at the year's end. The fruit was very large, bright red all over, A FREESTONE OF FINE QUALITY.

CONNECTICUT—The greatest early peach I ever saw.

OHIO—An exceptional peach. ERLY-RED-FRE astonishes one for its size, color, extra fine quality and keeping ability.

MICHIGAN—WITHOUT QUESTION THE FINEST QUALITY EARLY PEACH I EVER ATE.

OBSERVATIONS AND HISTORY OF ERLY-RED-FRE

We wish it were possible to give complete statements from those who have observed the ERLY-RED-FRE this year. In all our experience we have never introduced a variety that has met with such universal approval. The fruits on our own trees here at Princess Anne came through with a partial crop in the face of a snow and sleet storm and two nights temperatures of 22 degrees, which the trees were in full bloom. Some other varieties did not set a single peach under these conditions in the same orchard. This test orchard also went through an early hard storm when the peaches were about 1/2 developed. With all this we had some fruits on trees in their 3rd growing season measuring 3 1/2" in. Extra fine specimens. All fruits of the ERLY-RED-FRE were ripe and gone before Red Bird harvest was completed.

We feel we have given to the fruit

ERLY-RED-FRE FRUITS
RIPENS WITH RED BIRD; 3 TO 4 WEEKS BEFORE GOLDEN JUBILEE; 6 TO 7 WEEKS BEFORE ELBERTA

GROWING WORLD ONE OF THE GREATEST EARLY PEACHES OF ALL TIME. We have tried not to be over enthusiastic about this peach. Preference to let others boost it after they have grown it under their own conditions. Statements such as we list here from all sections of the country attest to its adaptability and the general satisfaction you can expect from your ERLY-RED-FRE trees. PLANT YOUR ORCHARD OF ERLY-RED-FRE THIS YEAR.

The "ERLY-RED-FRE" originated as a chance seedling in the orchard of Wm. Perry near Chase City, Va. Apparently that the "ERLY-RED-FRE" is the result of the planting of a Red Bird Peach Seed planted fall of 1928. Our attention was first called to this splendid peach in 1935. The second generation trees bore in 1937 at 2 years of age, the fruits on these being identical with those on the Parent tree. The original tree and second generation trees both bore a heavy crop in 1957, it being necessary to thin the fruit on all trees. These trees repeated in 1939, having a normal crop on them which was thinned lightly, when other varieties in the same orchard were killed out almost entirely with late frosts. The fruit is very highly colored with an attractive bright red on a creamy white background. The skin is tough and medium thick. The flesh of the peach is of such texture that it does not show bruises through the skin for several days after being bruised and is a clear white through to the pit. We believe this peach has one of the smallest pits of any cultivated peach we know of in existence. The fruit averages large for an early peach, some specimens weighing 12 ounces and the entire crop under normal conditions and care can be packed out 24 in a case. The tree is very vigorous, resistant to Bacterial, bears very young. It should prove one of the best money making peaches ever offered Southern Peach growers, being definitely the FIRST RIPENING FREESTONE PEACH NOW IN CULTIVATION TO OUR KNOWLEDGE. FOLLOWING CLOSELY THE MAYFLOWER AND PRECEDING THE GOLDEN JUBILEE SEVERAL WEEKS.

NOTE: This variety is protected by U. S. Plant Patent and cannot be propagated by anyone other than Bountiful Ridge Nurseries for any purpose.

Peach Growing Has Proven
Are You Planting to Maintain Your
Your Future Success Will Depend Largely On The Trees You Plant And
The Type Fruit You Grow.

OUR COMPLETE VARIETY LISTINGS AND PRICES
ALL OF OUR PEACH TREES ARE GRADED BOTH AS TO CALIBER AND HEIGHT, WHICH INSURES
YOU OF HAVING A UNIFORM TREE, AND ARE WORTH MORE THAN TREES SOLD ON THE BASIS OF
HEIGHT ONLY.

Our Low Prices on Peach Trees
In figuring prices you may combine all varieties of apple and peach and other tree fruits to get
advantage of large quantity price.

NOTE
Ripening order of varieties designated by bracketed numbers after name. Varieties
over-lapping in ripening season indicated by sub-letter. Example, Elberta and Hale are about same seasonal and are
designated by numbers 12 and 13A. We have endeavored to give you authentic ripening order of varieties, list, but varia-
tions may occur due to soil, fertilization and climatic conditions.

EARLY VARIETIES

**MAYFLOWER** (1) Earliest peach known. Dark red all over; beautiful appearance. Carries well to market. Blooms very late, crop never entirely cut off by late frosts. Size medium, quality good. Semi-cling.

**MIKADO** (2) The Mikado is again being given the greatest deal of publicity as a hardy, productive, early yellow peach ripening about one week after Mayflower or six weeks before Elberta. The tree is of medium size and vigor and should be
interplanted with other varieties for cross-pollination. The fruit is medium in size, round, semi-cling, attractive yellow and blushed with red. Quality is very good.

**RED BIRD** (Early Wheeler) (3) Earliness, high color and productiveness make it very valuable. Cling very large. Creamy white overspread with a bright, glowing red. Good shipper.

**ERLY-RED-FRE** (3a) See inside front cover for natural Kodachrome color illustration. Full description on page 15.

**GREENSBORO** (Semi-Cling) (4) Large yellow with splashes of bright red; highly colored; flesh white, very juicy and of good quality. Hardy, early.

**EARLY ROSE** (5) White, cling peach of very good color and quality. Our trees are grown from special selected strain as found in a large orchard of North Carolina. This variety is a favorite of the Southern peach grower as it is
always ready to store and will ship well. Ripens early.

**FISHER PEACH** (5a) See back cover for full Kodachrome color illustration. Full description on page 14.

**ORIOLE** (6) Introduced by New Jersey experi-
ment station in 1925, an early yel-
low Freestone peach ripens a few days ahead of Cumber-
land. Fruit medium size, yellow in color, blushed with red, and notable for fine quality. Tree is vigorous
and productive. The fruit buds are very resistant to cold and will grow where others fail in northern sections.
A fine peach for local markets.

**CUMBERLAND** (6a) A N.J. Station product. A
seedling crossed with Greenboros. The tree is a vigorous grower and hardy as Carman. The fruit large, the Georgia Belle, very attractive colored with red, oval in shape. The flesh is white, almost free, Bruner and better than Carman or Alton. Ripens just before Carman. Cumberland continues to gain in popularity in all peach sections on account of its fine appearance and ability to crop. Rec-
ommended to replace Carman.

**GOLDEN JUBILEE** (6b)
A PROVEN MONEY MAKER
No General Planting of Peaches is Complete Without A Liberal Amount of Golden Jubilee
A development of the New Jersey Experiment Sta-
tion, first offered by us during the Fall shipping season of 1928. Planted and producing in every peach pro-
ducing section of the United States and Canada and stands without an equal as a young, yellow, freestone peach of exceptional quality. The Golden Jubilee is a second generation seedling of the Elberta crossed with the Greensboro. The tree is unusually hardy. The buds resist low winter temperatures better than Elberta and open later than Elberta which insures a regular crop. The blossoms are self-fertile. The peach is medium to large size and firm. The peach develops better and is a well balanced fruit maker. As the tree grows older the fruit becomes firmer and develops more naturally. It proved to be the best money-making peach this year. Ripens about four to five weeks before Elberta.

**CARMAN** (6c) Large, creamy white with deep
tangerine color. Flesh tender, juicy, fine flavor. Tree semi-cling.

**TRIOGEM** (N. J. 70) (6d) See description on
page 17.

**RADIANCE** (7) A N. J. Station product. A seed-
ning of Belle crossed with Greensboro. A large, oval yellow, flesh white, skin smooth, firm and similar in form to Belle of Georgia; good quality and color. Ripens with Carman. It is proving a very good variety.

**FAIR BEAUTY** (7A)
HARDINESS—GREAT BEAUTY—HIGH QUALITY
recommend this peach for most all sections. Unexcelled in an early season variety.
An early peach following Golden Jubilee three to five
days. Tree vigorous, spreading, very hardy in bud, and bearing a crop. The fruit large, freestone, yellow, medium to large, skin red, flesh of a very deep, almost free color. Very productive and adaptable to both commercial and home use. It is recognized
in the South as a superior early yellow canning peach. We strongly recommend this peach for trial as a
commercial variety. The Fair Beauty originated near Tyler, Texas and is a natural cross between two select varieties. Its adaptability to central and eastern growing conditions.

---

16
NEW DAY (N. J. 79) (7b) See description elsewhere on page.

ROCHESTER (8) Large yellow and red peach. Second generation. Flesh yellow, of fine quality and exquisite flavor. Stone very small and will ship well as Elberta. The tree comes into bearing when very young, is a strong, upright grower, and is hardy as an oak.

MEDIUM EARLY VARIETIES

COLORA PEACH (9) Possibly The Most Outstanding Hardy, Early, Yellow Freestone Peach in Cultivation.

Tree and Buds Stand Low Temperatures Where Other Varieties Fail.

High Color, Superb Quality, Size and A Market Leader Are Reasons Why You Should Plant Colora This Year. Introduced In 1936.

We have propagated these varieties with the full knowledge and consent of the N. J. Peach Council, and we believe they are well adapted to the conditions of New Jersey. They are likely to be also well adapted to other southern states, especially those where the climate is similar to that of New Jersey.

TRIOGEM (N. J. 70) An early, oval, red freestone peach ripening usually about 2 days before Golden Jubilee or 20 to 25 days before Elberta. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good culture for best results.

NEWDAY (N. J. 79) A large oval, yellow-fleshed peach which begins to ripen a few days after Trilomar. The tree is somewhat more vigorous and the fruit averages larger which makes the variety somewhat easier to grow for market. The fruit is showy, firm in texture and hangs to the tree well. It is not always a freestone but this has not apparently affected the market demand.

GOLDEN GLOBE (N. J. 73) Where the market demands a large peach this variety meets that demand. It is very large, showy, yellow peach of delicious flavor ripening about 20 days before Elberta. The flesh ripens rather slowly and the fruit hangs well to the tree making it valuable for roadside and nearby markets. The tree is vigorous, upright and spreading. Fruit buds are somewhat tender under certain conditions. Usually a freestone.

One of America's BEST PAYING Crops Production and Future Income?

Our own introduction of a new frost resistant, yellow freestone peach. Second generation trees as well as the original branch have withstood temperatures during the past winters of about 17 degrees below zero, which most other varieties such as Elberta, Hily Belle, Belle of Georgia, Early Elberta and J. H. Hale were wiped out by these low temperatures. The peach is an attractive yellow, freestone well-colored and of excellent quality, ripening about 15 to 20 days before Elberta. In size, it is about the same as Elberta. We believe the planters will find this a valuable variety for planting in cold areas.

NEW EARLY HILEY (9a) A new strain of peach originating in Georgia. Has all the characteristics of its famous parent, but is a full week earlier in ripening.

GOLDEN GLOBE (N. J. 73) (9b) See description below.

VEDETTE (9b) A Peach of Proven Merit Adapting Itself To Southern Peach Areas.

Size, High Color, Excellent Quality and Shipping Ability Establish the Vedette As One of the Leading Peaches to Follow the Colora.

A product of the Vineland Experimental Station, in Canada, proving unusually well adapted in the various peach growing sections of the United States. A seedling of Elberta, resembling that variety in color and type of flesh, but is more globular in shape, more highly colored, and of much finer quality. The fruit is of large size, yellow fleshed, freestone. The tree is vigorous, very hardy, comes into bearing early and is very productive. This variety is now being grown in trial plantings near Columbia and Clemson, South Carolina, as well as other peach growing sections of the Central and Northern States. The fruit is a firm and a good shipper, ripening about one week after Golden Jubilee. A fine peach that promises to be a real money-maker for the Southern Planter as well as other sections, replacing the old Hiley with a larger, better quality, yellow, freestone, productive peach.

SUNHIGH (N. J. 82) (9d) Description below.

We have propagated these varieties with the full knowledge and consent of the N. J. Peach Council, and we believe they are well adapted to the conditions of New Jersey. They are likely to be also well adapted to other southern states, especially those where the climate is similar to that of New Jersey.

TRIOGEM (N. J. 70) An early, oval, red freestone peach ripening usually about 2 days before Golden Jubilee or 20 to 25 days before Elberta. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good culture for best results.

NEWDAY (N. J. 79) A large oval, yellow-fleshed peach which begins to ripen a few days after Trilomar. The tree is somewhat more vigorous and the fruit averages larger which makes the variety somewhat easier to grow for market. The fruit is showy, firm in texture and hangs to the tree well. It is not always a freestone but this has not apparently affected the market demand.

GOLDEN GLOBE (N. J. 73) Where the market demands a large peach this variety meets that demand. It is very large, showy, yellow peach of delicious flavor ripening about 20 days before Elberta. The flesh ripens rather slowly and the fruit hangs well to the tree making it valuable for roadside and nearby markets. The tree is vigorous, upright and spreading. Fruit buds are somewhat tender under certain conditions. Usually a freestone.
Peach Growing Has Proven One of America's BEST PAYING Crops
Are You Planting to Maintain Your Production and Future Income?

Your Future Success Will Depend Largely On The Trees You Plant And The Type Fruit You Grow.

Our COMPLETE VARIETY LISTINGS AND PRICES
ALL OF OUR PEACH TREES ARE GRADED BOTH AS TO CALIBER AND HEIGHT, WHICH INSURES YOU OF HAVING A UNIFORM TREE, AND ARE WORTHY OF SELLING MORE TREES THAN THE BASIS OF HEIGHT ONLY.

Our Low Prices on Peach Trees
In figuring prices you may combine all varieties of apple and peach and other tree fruits to get advantage of large quantity prices.

NOTE
Ripening order of varieties designated by bracketed numbers after name. Varieties ripening earlier in ripening season indicated by sub-letter, Example, Elberta and Dale are assumed to ripen and are designated by numbers El and 3A. We have endeavored to give you a accurate ripening order of varieties, we list, but variations may occur due to soil, fertilization and climatic conditions.

EARLY VARIETIES
MAYFLOWER (1) Rarified peach known. Dark red skin, yellow flesh, jelly-like, cling, slightly blushed with red. A small dark freestone, very productive. The skin is very smooth, the trees are large and productive, the fruit is a good size, and is very attractive. The wood is very hard, and the trees very strong.

MISOJIKI (2) A new variety again being grown in northern districts, a peach of great deal of publicity as a result of the announcement made a few weeks ago that this variety will ripen one week after Mayflower or six weeks before Elberta. The trees are large in size and vigor, and would be interpreted with other varieties for early ripening. The fruit is large, very productive, the flesh yellow and blushed with red. Quality is very good.

RED BIRD (Early Wheeler) (3) A pure red freestone variety, the tree is very vigorous and productive, the fruit is very valuable. Cling, very large. Creamy white overpaved with a light red shading.

ERLY-RED-FRE (5a) See inside front cover for natural Kodakchrome color copy. Full description on cover.

GREENSOMO (Semi-Cling) (4) A new variety that is gaining in favor. A large yellow with splashes of bright red; highly colored. Ripens early June. Very productive and hardy. Earlies.

EARLY ROSE (5) White, cling peach of very good color and quality, our trees are grown from special selected strain as found in a large orchard of North Carolina. This variety is best for early canning as it easily turns red and makes a very nice jelly.

FISHER PEACH (5a) See back cover for natural Kodakchrome color illustration. See description on cover.

ORIOLE (5) Introduced by New Jersey experiment station in 1929, an early variety. Yellow Freestone peach ripens a few days ahead of Cumbland. Free stoned, skin is yellow striped with red, and notable for fine quality. Tree is vigorous and productive. The fruit is large, good, and it keeps very well.

CUMBERLAND (6a) A N. J. Station product, fruit is semi-cling, skin is yellow or orange striped with greenish. The color is a vigorous grower and hardy. Ripens in late July. The wood is white almost true, firmer and better than Carman or Cumbland. Ripens later, therefore, continues to gain in popularity in all peach sections. Carman is recommended to replace Cumbland.

GOLDEN JUBILEE (6B) A PROVEN MONEY MAKER
No General Planting of Peaches is Complete Without A Liberal Amount of Golden Jubilee as a Market Variety. The availability of this variety is limited due to the fact that this variety is not being planted in large quantities. Golden Jubilee is a productive variety, the fruit is large and good, quality is very consistent, and the trees are large, hardy, productive.

FAR BEAUTY (7A) HARDINESS—GREAT BEAUTY—HIGH QUALITY
Ripens in June. Sweet, juicy, firm, large, and of good color. The fruit is large, juicy, and of high quality.

THE COLOR PEACH
NEW DAY (N. J. 79) (3b) See description elsewhere on page.
ROCHESTER (8) Large yellow and red peach. Flesh yellow, of fine quality and attractive flavor. Flavor is very sweet and ships well as Elberta. The tree grows into bearing within very young, is strong, upright grower, and is hardly an oaks.

MEDIUM EARLY VARIETIES
COLORA PEACH (9) Possibly The Most Outstanding Hardy, Early, Yellow Freestone Peach in Cultivation. Trees and Buds Stand Low Temperatures Where Other Varieties Fail. High Color, Superb Quality, Size and A Market Leader Are Reasons Why You Should Plant Colora This Year. Introduced in 1936.

New Peach Varieties Developed at N. J. Experiment Station. Released by N. J. Peach Council.

COLORA PEACH—This variety is being released for early ripening and is particularly well adapted to the northeastern part of the state. It is a good producer, the fruit is large, round, yellow, and of good quality.

GOLDEN GLOBE (N. J. 73) (9b) See description below.

VEDETTE (9B) A Peach of Proven Merit Adapting Itself To Southern Peach Trees. Sire, High Color, Excellent Quality and Shipping Ability Enable the Vedette As One of the Leading Peaches To Follow The Colora.

SUNHIGH (N. J. 82) (9d) Description below.

GOLDEN GLOBE (N. J. 73) (9b)

This variety is being released for early ripening and is particularly well adapted to the northeastern part of the state. It is a good producer, the fruit is large, round, yellow, and of good quality.

VEDETTE (9B)
A Peach of Proven Merit Adapting Itself To Southern Peach Trees. Sire, High Color, Excellent Quality and Shipping Ability Enable the Vedette As One of the Leading Peaches To Follow The Colora.

SUNHIGH (N. J. 82) (9d)

This variety is being released for early ripening and is particularly well adapted to the northeastern part of the state. It is a good producer, the fruit is large, round, yellow, and of good quality.
HALE HAVEN

We Endorse and Recommend This Great Peach To Growers in All Sections Where Size, Color, Quality and Shipping Ability Are Paramount Considerations.

We know of no Peach of recent introduction that is proving so universally satisfactory as the Hale Haven. It has proved an unchallenged leader of peaches to follow the Golden Jubilee, Colora, Vedette. The tree is a strong thrifty grower resistant to common peach diseases, the fruit is large, oval shaped like a well grown J. H. Hale, it has a good tough skin, the flesh of the peach being of such texture that it will not bruise easily and best of all it has a beautiful, handsome red color that at once attracts the buyer and a flavor that is as good as the very best. The Hale Haven is a product of South Haven Experimental Station, in Michigan. Note the success of this variety in test plantings in the South. The South can now grow a large yellow peach in place of the old Hiley that will bring much higher prices on the markets. Wherever you are located you cannot go wrong by planting liberally of the Hale Haven. BE SURE YOU ARE BUYING THE TRUE STRAIN OF HALE HAVEN TREES WHEN YOU PLANT BUY BOUNTIFUL RIDGE GROWN HALE HAVEN TREES.

SOUTH HAVEN (10a) Introduced by the South Haven Experimental Station and proving hardy and an excellent peach. The tree is very thrifty and productive. The peach is of Elberta type, ripening from 12 to 16 days before Elberta. While not as good a shipper as Elberta we believe it will carry satisfactorily to markets within a radius of 700 miles. It is a freestone, yellow fleshed peach which colors up well and ripens its crop over a period of about ten days which makes it especially desirable for local and road stand markets. This is an excellent variety to follow the Golden Jubilee and to precede the Early Elberta.

HILEY BELLE (Hiley) (11) A medium sized white flesched freestone peach with beautiful red blush and tough skin. The flesh is juicy and tender. For many years the South's greatest early commercial peach.

SLAPPY (Improved) (11a) We are propagating a selected strain of Slappy that we consider superior to the original Slappy variety. The peach seems to average larger, much higher colored, and the tree seems very vigorous, otherwise it is a typical Slappy in every way. The Slappy is a yellow freestone peach of very good quality, ripening about the same time as Hiley Belle. It is especially desirable for nearby markets where quality and appearance count.

Our Peach Trees Are Famous For Growth And Productiveness

VALIANT (11B)

One of the so-called V varieties introduced by the Vineland Experimental Station, Vineland, Ontario, Canada. The Valiant is a seedling of Elberta and as it comes into fruiting over a wide area it is proving its right to a place in our peach planting program. It is possibly the largest of the V varieties, globular in shape and very attractively colored with bright red over a rich yellow. It has exceptional quality and holds up well in shipping to not too distant markets. It ripens just after the Vedette and about with the Hale Haven, being very similar in shape to the Hale Haven, the distinguishing factor being the shape of the apex end. The tree and fruit is more subject to fungus diseases than the Vedette and we do not recommend the Valiant for far southern planting where hot, humid atmospheric conditions exist. It is a close rival of the Hale Haven in the central and northern districts and is preferred by some growers. It seems to very hardy and productive. We can surely recommend the Valiant as one of the better peaches to precede the Elberta season.

GOLDEN EAST (N. J. 87) (11c)

See description on page 17.

ECLIPSE (11d) A self-pollinated seedling of Belle. A dark red, yellow-fleshed freestone peach of firm texture and good flavor, ripening with Hiley. Size equal to Hiley, tree more vigorous. Fruit oval, flesh fine grained; excellent shipper: hangs to the tree well. Recommended as a variety to replace Hiley.

CHAMPION (11e) Large, round, quite regular; a little yellowish-white, mot-tled with red on sunny side; flesh white with red at the pit. One of the best in quality and a general favorite of every grower. Recommended.

KALHAVEN (11f) Originated in Michigan and is a cross between J. H. Hale and Kainannazo. The trees are Hardy, vigorous and fast growing, appearing to be resistant to the common peach diseases. The fruits are medium to large, of good color and shape, and of fine texture and flavor. Ripens late, after Elberta. Recommended.

EARLY ELBERTA (12)

A Great Commercial Peach Ripening Just Before Regular Elberta.

Where Quality—Size—Productiveness and Beauty Are Desired, Plant Our Old Original Strain of Early Elberta. There is a difference.

A great commercial peach in the Central and Northern part of the United States. The markets are not the greatest but the quality and character of the fruit make it well worth planting. One of the most beautiful of the Elberta type peaches. A very large, attractively colored, yellow flesched freestone peach ripening with Belle of Georgia or from 3 to 7 days before the regular Elberta. The highest quality peach of all the Elberta types grown commercially. The trees are hardy, thrifty and bear consistently. The deep lemon yellow colored skin, blushed with white, makes it very productive. The peach contains a beautiful golden yellow color after being canned. IF YOUR MARKET DEMANDS QUALITY AND BEAUTY PLANT THE EARLY ELBERTA. Our trees are propagated from the original old strain of Early Elberta.
Peaches to Plant

Quality - Appearance - Productive
WE PRESENT ONE OF THE GREATEST SUCCESIONS OF THE COMMERICAL PEACH INDUSTRY. A PLANTER HAS EVER HAD THE OPPORTUNITY OF BUYING PLANTING THESE VARIETIES MEANS GREATER SUCCESS IN PEACH GROWING.

** Valiant

VARIETIES LISTED IN ORDER OF RIPENING
* Indicates—Commercial varieties, with average hardiness, as near-by markets.
** Indicates—Hardy varieties as well as commercial varieties.
*** Indicates—Extremely hardy commercial varieties of superior merit.

PRIMROSE (12a) A seedling of Belle crossed with Elberta. A large yellow fleshed freestone of good quality, ripening with Belle. We recommend this variety to replace Belle and precede Elberta in home orchards and it is proving worthy of planting on a commercial basis for nearby markets.

SUMMERCREST (N. J. 94) (12b)
See description on page 17.

BELLE OF GEORGIA (12C)
The White Peach That Has Stood the Test of Time and Stands Today as the Leader of All White Peaches of Its Season Adapted to Large Commercial Plantings in All Peach Producing Areas.

Fruit large, bright attractive red almost covering the peach with white background. Flesh white, highly flavored and very firm and known universally as one of the best shipping white peaches in cultivation. Tree very vigorous, hardy and productive. Are you planting to supply the demand for a good white peach? Plant Belle of Georgia. A Freestone.

ELBERTA (13)
The Famous Elberta Peach Continues To Be America's Leading Commercial Peach! The Peach With A Pedigree—and The Worlds Greatest Money Making Peach.

Year after year This Great Peach Brings A Smile of Satisfaction To The Growers Countenance.

Years of Propogation Have Produced Many Inferior Strains of This Famous Peach and Are Responsible For Much Unjust Criticism of Quality and Type.

Plant Bountiful Ridge Selected True Strain Elberta For Greater Profits and Consumer Satisfaction.

Without question the greatest commercial peach ever introduced. It has proven its ability to adapt itself to varied climates and soil conditions throughout the U. S. and Canada, whether the climate is hot or cold, whether the soil is light sand or heavy clay, Elberta can be depended on to give you fine results. There is no prettier peach when grown under ideal conditions.

The tree is hardy, disease resistant, very thrifty and very productive under most conditions. The fruit is large to very large, a freestone, skin a deep golden yellow and highly colored. The skin tough and the flesh, white tender and juicy, is of such texture that the ELBERTA IS FAMOUS FOR ITS ABILITY TO CARRY TO DISTANT MARKETS. The quality is classed as good, and the slight bitter flavor is preferred by many. It is estimated that 50% of all peaches planted are Elberta. As improved types and varieties are introduced this ratio is lowered but after all is said ELBERTA STILL REMAINS THE WORLDS LEADING COMMERCIAL PEACH. We are propagating our Elberta trees from selected orchards of great bearing records and to the old original type Elberta.

J. H. HALE (13a)
A description will hardly do justice to this fine variety. In size it is one-third to one-half larger than the Elberta and is more highly colored. The skin is deep crimson, smooth, tight, and without fuzz. Flesh is golden yellow, firm, and has a most delicious flavor. The pit separates easily from the flesh. It is exceptionally valuable as a commercial peach, owing to its unusual keeping qualities. Will ship nearly as well as an apple. Fruit ripens a few days before the Elberta, but it will hang on the tree longer. Your collection is incomplete without it. Note—The J. H. Hale does not have an entirely definite but the best results it should be planted with some other variety.

SHIPPER'S LATE RED (14)
Fast Becoming A Favorite Wherever Planted. Hard To Equal As A Large, Productive, Handsome Peach To Follow Elberta.

A large, very high colored attractive red, yellow fleshed freestone and good quality. Plant this type just after Elberta and J. H. Hale. A good shipping peach, extremely productive, very hardy and its beauty and size enables it to bring top prices on the markets. This splendid variety should be planted more extensively as we know of no variety we can recommend more highly for a peach to follow the Elberta.

Much confusion exists regarding the various strains of this variety. We are growing the true types as determined by comparison with fruit in U. S. D. A. test orchards.

BOUNTIFUL RIDGE HALE HAVEN TREES 32 MONTHS AFTER PLANTING HAVE AVERAGE SPREAD OF 12 ft. AND HEIGHT OF 10 ft. AND PRODUCED 1¼ Bu. PEACHES ON SOME TREES THEIR THIRD GROWING SEASON. THIS IS A LIVING EXAMPLE OF THE ADAPTABILITY OF BOUNTIFUL RIDGE GROWN YEARLING TREES AND THE HALE HAVEN VARIETY.
Our Trees Are Triple Inspected For Your Protection

GAGE ELBERTA (14A)
A Disease Resistant Bud Sport of The Famous Elberta Peach, Which We Can Recommend Highly.

This splendid peach originated in the orchards of Mr. John Gage near Texico, Illinois. Recommended for resistance to bacterium prun. The tree grows thrifty as the Elberta and looks much like the old time Elberta. Gage Elberta blooms from two to four days after Elberta and apparently has a very strong blossom setting a crop of fruit under unfavorable conditions. The fruit is so near the Elberta that only an expert can distinguish the difference. It ripens two to three days later than Elberta.

This variety is proving well adapted to Southern conditions in the trial planting at Columbia and Clemson, South Carolina and is to be preferred over the Elberta in many respects.

Very favorable reports are coming to us from Ohio, Indiana, and Illinois on the Gage Elberta and some large orchardists are planting it in preference to the Elberta in large quantities.

THE BRACKETT PEACH (14b)
This is a comparatively new variety in some sections, but has been tried and proven one of the most profitable peaches in the South. Its season is about five days after Elberta, with a beautiful orange-yellow skin tinged with carmine. Flesh is a deep yellow and much higher flavored than Elberta. This peach sizes up well under heavy crops and is equal to Elberta as a shipper. A perfect freestone.

AFTERGLOW (N. J. 84) (14c)
See description page 17.

MEDIUM LATE VARIETIES

WILMA (15a) A very large, late, yellow freestone peach. Somewhat round in shape, nicely colored and good quality. It ripens from ten days to two weeks after Elberta and is the true type of Wilma Peach. Tree hardy, thrifty and productive.

CRAWFORD'S LATE (16) Large roundish oval, yellow with broad red cheeks; flesh yellow with red at pit; melting, vinous and very good.

ROBERTA (16a) A variety that is becoming justly popular. Very similar to Elberta in all respects except its season, which is a week to ten days later. This is one of the finest buds of this variety (some say from the orchards of Mr. Roberts, Moores- ton, N. J. An excellent variety to follow Elberta season.

IRON MOUNTAIN (17) Free, white, medium to large size, egg-shaped; color pure white, with slight blush; good quality; good keeper; very regular bearer.

LIZZIE (17A)
SIZE-FIRMNESS-FINE COLOR—EXCELLENT QUALITY COMBINE TO MAKE THIS PEACH A FAVORITE TO FOLLOW ELBERTA SEASON.

The origin of this peach has not been fully determined, yet it has been very successfully grown by commercial orchardists of New Jersey, Connecticut and in several southern states. It is a distinct Elberta type peach, very large, freestone, having a fine yellow flesh of excellent quality. The flesh is very firm in texture and the peach ripens slowly after being taken off the tree. It ripens from 8 to 12 days after Elberta, colors well with a handsome red over a deep yellow undertone. The tree is thrifty, hardy, heavy bearer of regular crops.

Some growers consider it the best of our present list of late peaches to follow Elberta.

SALBERTA (18) A large, late yellow freestone peach of distinct Elberta type with good color and quality. Very similar to Roberta only ripens a week later. Can be recommended as a late Elberta type peach.

HEATH CLING (Cling) (18a) Very large, roundish oval, yellow, firm, sweets; flesh yellow, with delicate red blush; firm, slightly red at the pit; tender, juicy, and sweet; a valuable sort for canning and one that commands fancy prices in all markets.

SALWAY (Free) (19) Large, roundish, deep yellow with rich red checks; flesh yellow, firm and juicy and sugary; trees are strong growers and bear plentiful crops. A late market sort.

KRUMMEL'S OCTOBER (20) A magnificent peach; the most prolific and best late yellow freestone, which ripens after Salway, or six weeks after Elberta. Medium large, almost round, deep yellow with a dark carmine blush; very firm, fine texture.

“SAVE BY COMBINING FRUIT VARIETIES AND TYPES.”
To save you money and meet changing conditions, Bountiful Ridge this year, gives you the privilege of combining all tree fruits in your order and figure them at the rate your total fruit trees come under. A real saving to you.

OUR IMPROVED MODERN DIGGING EQUIPMENT

In 1933 we purchased this Dreadnought Digger attached to a high clearance Caterpillar tractor.

Note the wide cutting blade which runs 18 inches in the ground making a complete cut of the root system of trees and other nursery stock.

By the use of this digger you get the full root system with no damaged stock either in root or top. We fully realized the advantages of this modern digging outfit and were the first nursery in the east to adopt this tree digging equipment.

Bountiful Ridge Nurseries lead the way in modern Nursery equipment for the production of fruit trees and plants.
EVERY HOME ORCHARD SHOULD HAVE A LIBERAL PLANTING OF NECTARINES AND APRICOTS. THEY ARE EASY TO GROW AND ADD A DELIGHTFUL VARIATION IN SUMMER FRUITS. AGAIN BOTH ARE GOOD FOR CANNING AND PRESERVING.

NECTARINES

THE DELIGHT OF THE FAMILY PLANTING

A smooth-skinned Plum-Peach. Tree grows like Peach.

Fruit looks like large Plum. The Flavor
both Peach and Plum.

SURE CROP

It was imported to this country from New Zealand and is one of the finest if not the finest of recent nectarines tried in this country. The tree is vigorous and productive. The fruit is large, roundish, white, and overlaid with very attractive red. The flesh is firm, tender, free from stringiness and very pleasing flavor. Late mid-season.

RUBIRED Nectarine

The origin of this nectarine is unknown to us. We secured the budwood from a customer of ours in North Carolina. We were so impressed with the growers account of this nectarine and the fruits which we never seemed to duplicate and offered to our patrons. The fruit is of large size, smooth skin, fine red color and excellent quality, with a nice flavor which is particularly pleasing.

BOSTON

Tree small but vigorous, hardy and productive. Flowers mid-season; fruit late mid-season; medium size, yellow blushed with crimson. Yellow fleshed, sweet, aromatic, good quality.

HUNTER

One of the good yellow fleshed Nectarines we have. Tree is hardy and vigorous. Fruits are large, somewhat round, and attractive yellow with red blush and a fine quality. Good enough.

QUETTA

One of the more recently introduced Nectarines which is fast gaining favor with the small planter and those growing for market purposes. Very hardy, fruits large, color white splashed with attractive red. White fleshed, juicy and very sweet flavor.

Note: Nectarines sell well on most roadside and nearby markets and are splendid for canning, eating and cooking purposes.

A good variety; very large deep golden yellow, and fine in quality.

SUPERB

Rated by many as the best of our older and widely planted varieties of apricots. The tree is large, very thrifty and hardy and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

ROYAL

One of the leading commercial Apricots. Tree large, vigorous, regular in bearing large crops which ripen uniformly. Fruit mid-season and large. Color pale yellow with orange cheek tinged with red. Flesh rich, yellow, firm, very good quality.

BUDD

Possibly the best of all the Russian group of Apricots. Ripens very early, having a sweet peach like flavor. Tree is vigorous and hardy. Fruits very early; skin golden yellow, tinged with red; flesh bright orange, juciy, sweet, semi-cling.

Note: Advanced sales on MOHR'S APRICOT during fall 1940 absorbed all stock available therefore we will not have any of this wonderful apricot to offer for shipment before Fall 1941.

GOOD STOCK—WELL PACKED—WONDERFUL SERVICE—RAPID GROWTH WITH BOUNTIFUL RIDGE STOCK

TREES GROWING FINE

Gentlemen: Hart, Mich., July 15, 1940

I wish to tell you about the 300 fine peach trees you sent me this spring. Every single tree is alive and growing fine. The finest block and best growth on now, I ever planted.—Benton Gebhart.

NEVER BOUGHT FINER TREES

Dear Sirs:

Atchison, Kan., August 3, 1940

The trees I got from you this spring are doing nicely, though held back by dry and hot weather. I have never seen as fine a lot of trees as the ones I got from you in the spring, and I have purchased from many nurseries.—Sam J. Blythe.

PLEASSED WITH QUALITY

Hampton, S. C., January 5, 1940

Dear Sirs:

The bundle of fruit trees ordered from you arrived in good shape. I am very much pleased with the quality of the trees.—Izora Milley.

THANKS FOR WONDERFUL SERVICE

Burkeville, Va., April 9, 1940

Dear Sirs:

Many thanks for the wonderful service you have given us and for the extremely fine plants. We thank you ever so much for your consideration.—Henry Cornes.

LIKES THE WAY WE SHIP

Harrisburg, Pa., April 17, 1939

Gentlemen:

I was well pleased with your stock. Thanks for the three shrubs, I like the way you ship them.—Frank Hahn.

This is another example of what can be done with Bountiful Ridge Grown Peach trees. This photograph shows Carlton Riley, son of Mr. H. J. Riley, Parksville, Va., standing by a 2 year old peach tree in their orchard. They got good trees. They gave them excellent care. They will reap quick and Bountiful Results. IT PAYS TO GET BOUNTIFUL RIDGE GROWN TREES AND PLANTS.
CHERRY TREES

SWEET CHERRY TREES

We have a fine lot of sweet cherry that is hard to equal. You will find these trees ideal for orchard planting.

NOTE: Sweet cherries bear heavier and more regularly where properly cross pollinated and we recommend where possible that you plant two or more varieties of sweet cherry near each other when planting.

Prices given are per tree

Write for special prices if you are interested in 300 trees or more. We will give you the advantage of any market changes if you do this.

SENECA Our earliest good sweet cherry, ripening early. Black Sweetkan. The Cherries resemble those of Black Tartarian—large, round-cordate, purplish black, with juicy melting flesh and a rich sweet flavor; the pit is free and the skin does not crack. The tree is vigorous, productive, and has upright spreading habit of growth. Introduced by X. Y. Agriculture Experiment Station.

BING This valuable black cherry succeeds everywhere. Flesh very solid, flavor of the highest quality, a fine shipping and market variety. July.

BLACK TARTARIAN Very large; bright yellowish red; flesh bright; brisk, tender; juicy, very rich. Tree a remarkably vigorous and erect grower, and an immense bearer. One of the most popular varieties in all parts of the country. June.

GOVERNOR WOOD Large, heart-shaped fruit; light yellow mottled red, juicy, sweet and rich. Tree vigorous, productive, handsome, and hardy. An old variety still a favorite in many regions.

LAMBERT One of the largest of all Cherries. It is purple-red, firm and rich. Every year sees an enormous crop, and the tree not only grows well, but is proof against insect and fungal attacks.

NAPOLEON BIGGAREAU (Royal Ann) A beautiful cherry of large size; pale yellow with bright red cheek; flesh firm, juicy and sweet; one of the best for market and canning. Hardest of light yellow cherries and deservedly popular.

SCHMIDTS BIGGAREAU The fruit is of medium size; of yellow color; deep mahogany color. Flesh dark, tender, very juicy, with a fine rich flavor. Fruit grows in clusters. Is an excellent shipper. July.

WINDSOR Tree upright, vigorous and a rapid grower, fruit large, roundish, oblong, very firm and juicy; flesh pinkish and sometimes streaked; quality very good; a productive bearer; has attracted attention owing to its large size and dark color; almost black. July.

POLLY ANNE A large grey heart sweet cherry. Very delicious and regular bearer. Tree thrifty and productive. Especially adapted to home use and near by markets.

Sweet September Cherry

There is no previous record in the history of Horticulture of a fall-bearing cherry until accidentally discovered by an amateur Horticulturist in Northwestern Ohio. This sweet cherry tree, for some unknown reason, begins to bloom instead of fruiting in the same size as other varieties and is apparently harder in the bud than average sweet cherries. The fruits are an attractive medium red, somewhat similar to the Windsor, deliciously sweet, excellent for eating fresh or canning. It ripens in Ohio from about September 7th to 10th. The fruit is firm, makes it valuable for road-side markets, as the fruit can be sold over a long period of time.

IMPROVED MONTEMORENCY BOUNTIFUL STRAIN

ADD TO SOUR CHERRY PROFITS BY PLANTING THIS GREAT NEW TYPE MONTEMORENCY. This is the largest and most beautiful type Montmorency cherry that has ever come under our observation. It was discovered in the orchards of Clyde S. Mumma, Dayton, Ohio in a general planting of Montmorency trees and when we first saw the tree it was about 10 years of age and loaded down with fruit, having a heavier crop than other trees adjoining it. All trees had had the same attention and Mr. Mumma says it had always borne this large type Montmorency. The tree is vigorous but not any larger than other trees. The fruits have the same rich red color as other Montmorency cherries but seems to be slightly more mild in flavor. Its immense size immediately attracted our attention. We grew several hundred trees of this type for Mr. Mumma’s own planting and after further observations now pass it on to our customers at no additional cost to them. Nature again contributes an IMPROVED TYPE TO ONE OF OUR GREATEST SOUR CHERRIES. Please state when ordering whether you wish the Regular Montmorency or BOUNTIFUL STRAIN IMPROVED MONTEMORENCY. We can supply them in both one and two year trees.

ENGLISH MORELLO Easily grown, generally producing a heavy crop. Fruit dark red, quality good; rich, acid flavor; late. Hardy for extremely cold latitudes. August.

EARLY RICHMOND One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in the gardens. The most hardy of all varieties, uninjured by the coldest winter.

BRASSINGTON Tree upright, dense, very productive. Fruit averages 3/4 to 1 in. in diameter, attractive, round, light red color, juicy, sub-acid, pleasant flavor; a faint reddish tinge permeates the yellow flesh. Fruit characters are intermediate between sweet and sour cherries.

LARGE MONTEMORENCY There is a greater demand on the market for this Cherry than any other. The trees are the cleanest and best growers and are less subject to disease, less affected by wet weather, and are the best bearers of the best fruit of all other sour varieties. No matter how unfavorable the season may be, Montmorency can be depended upon for a full crop. The fruit is very attractive, looking, and always brings good prices.
PLUM TREES

Plant More Plums As An Added Profit Maker
Growers During 1940 Season Found Good Markets and High Prices.

Statistics Show We Are Not Growing Enough Plums to Supply The Market Demand In The East. Plant This Year.

The Plum, like the Pear and other finer fruits, succeeds best in heavy soil with some clay, and being almost entirely free from disease, they can be grown very profitably. The finer kinds are excellent dessert fruits, of rich and luscious flavor; for cooking and canning they are unsurpassed.

In figuring prices you may combine all tree fruits and figure them at the rate you total fruit trees come under.

1 yr. 2-3 ft. .40 .30 .25

All plum trees budded on Myrobalan Plum root which induces longer life, more healthy and vigorous trees and better crops.

STANLEY A cross between Agen and Grand Duke. The fruit is of the prune type, excellent for cooking or eating out of hand. The tree is healthy, vigorous and produces full crops annually. Fruit large in size, dark-blue with heavy bloom, flesh, greenish-yellow, juicy, fine-grained, tender firm, sweet, pleasant, quality good to very good clay, and being a season, Stanley is one of the New York Experiment Station's prize plums.

BRADSHAW Due to very large size, fine dark violet-red color, good shipping and keeping ability the Bradshaw has continued to grow in popularity. The flesh is yellowish green, juicy and pleasing to the taste. The tree is very vigorous, erect and productive.

FELLEMBURG OR ITALIAN PRUNE

Our most popular Commercial plum. It succeeds under most all climatic and soil conditions. The fruit is dark purple with a dark blue bloom medium to large size, oval, pointed and tapering. The flesh is juicy and delicate fine to fine for drying and canning. It is fast replacing the German prune in commercial plum orchards. We are glad to say we have a fine lot of this year trees of this splendid variety to offer this year. This plum and the Early Italian prune we are selling make a very profitable combination.

GERMAN PRUNE

A valuable Plum of fair quality for dessert, but most esteemed for drying and preserving. Large, long, and pleasant, separating from the stone. Moderate to vigorously in growth. September.

IMPERIAL GAGE Large oval, yellowish-green with marbled green stripes, heavy white bloom, flesh greenish, juicy, melting, rich and best quality; tree upright and vigorous. September.

LOMBARD Medium, roundish-oval, violet red, juicy and pleasant; adheres to stone; valuable market sort, hardy, and adapted to light soils; a reasonably sure cropper.

SHROPSHIRE DAMSON Fruit oval; tree a good grower and enormously productive; fruit of medium size produced in thick clusters or groups, dark purple color, esteemed for preserving.

Note. Plums seem to be generally self-fertile but produce better when other varieties are intermixed. Japanese varieties have been found to be somewhat self-fertile. Abundance is considered one of the best general pollinizers.

DAMSON The old-fashioned blue Damson, known to every housewife for the fine jelly and preserves they make. Tree very hardy and prolific bearer.

JAPANESE PLUMS

WICKSON Largest of all Oriental Plums. Tree upright in growth bearing good crops under proper conditions. Fruit large, dark red over a yellow ground, splashed and mottled with dark-red flesh. Amber yellow, juicy, firm, pleasant and sweet in flavor. Stock limited.

ABUNDANCE One of the best Japanese Plums. Tree is very rapid grower, healthy, and comes into bearing quite young and yields abundantly; medium size, rich, bright cherry red with distinct bloom and highly perfumed flesh light yellow, juicy and tender, and excellent quality. Tree vigorous and hardy.

BURBANK Medium to large, orange-yellow, dotted and marbled with red, flesh flinty yellow; sweet and good; valuable for canning and a good market plum. Hardy and most prolific of the Japan varieties.

Mr. George W. Kemp takes pride in displaying our Peach trees this year. Mr. Kemp now 72 years old and having early training in growing peach trees under his father and continued producing through his life's span, knows good trees, and how to grow them. This is another reason why you should plant Bountiful Ridge trees this year.

WAITE PEAR

A NEW PEAR WITH COMMERCIAL POSSIBILITIES.
10 Times More Blight Resistant Than Keiffer. Bartlett
Shape and Size, Fine Quality, Almost Seedless.
A product of the U. S. O. A. Bureau of plant industry developed by Mr. M. B. Waite. The Waite pear, previously tested as No. 60351 is outstanding in Blight resistance, never developing under severe test conditions more than 10% as much blight as the Keiffer. The fruit resembles that of Bartlett and is about same size, ripening about same season as Keiffer. The flesh is smooth in texture and is almost free of grit cells. It is more acid than Bartlett but is excellent for cooking and canning and fairly good for dessert purposes. The tree is rather slender, willowy grower and of moderate vigor.
The Waite pear requires cross pollination for consistent crops. The fruits are very attractive, having good finish, slight blush. Nearly all fruits observed this year were almost seedless, showing extremely small core. 5c extra per tree in all grades.

GORHAM
Rosesmles Bartlett in size, color, shape, only ripens 2 weeks later. The flavor is sweet with very marked and pleasing aroma. The flesh is white, tender, buttery and juicy. The trees are vigorous and productive and very resistant to blight. 5c extra per tree.

OID
One of the Latest Ripening Bartlett Types Released by Geneva Exp. Station, worthy of trial as Market Pear in all Fruit Sections.
The fruit is large and resembles Bartlett. The flesh is fine grained, crisp, tender, nearly seedless, good and good quality. The tree is a strong grower and definitely blight resistant. The Ovid gives promise of being one of our best late ripening and keeping pears.

NOTE—Most Pear varieties are self-unfruitful and should therefore be interplanted with other varieties to produce consistent crops. It should be noted however that neither Waite nor Bartlett will not cross pollinate each other and where these two varieties are being planted another variety should be added. Duchess and Flemish Beauty are the most self-fruitful of those we list and are therefore good pollinating varieties. We shall be glad to give detailed information upon request.

Quince Trees
Quince prices, all varieties:
2 yr. 3-4 ft. 1 to 9, 60c each; 10 to 49, 50c each.
2 yr. 3-4 ft. 1 to 9, 50c each; 10 to 49, 40c each.

ORANGE Roundish bright golden-yellow, very large, fine grained, one quality. Best for cooking. Firm, will stand shipping.

CHAMPION Fruit very large, fair and handsome. Bears abundantly while young; flesh cooks as tender as an apple without getting soft and cores; flavor delicate; quince taste.

The New Waite Pear. A Real Winner for the Central and Southern Sections

BARTLETT

The Greatest Commercial Pear
It Stands Today Unchallenged As a Home and Market Pear Throughout the Northern District.

Large size; golden yellow when ripe, with a beautiful blush next to the sun. Battery, very juicy, and highly appreciated by every grower of pears. A strong grower; flesh white, rich and abundantly; very popular. August and September.

CLAPP’S FAVORITE A large, fine pear. resembling the Bartlett; pale lemon-yellow with brown dots on a fine stem; melting, buttery, juicy, with a delicate flavor; tree hardy and productive. August and September.

BUERRE BOSC
Greatly esteemed. A large, fine pear of yellow color; extremely productive; keeps until Christmas.

ANJOU

A large, fine pear, buttery and melting, with slightly flour; tree a fine grower and very productive. One of the best. October to January.

DUCHESS D’ANGOULEME

Very large, greenish-yellow, sometimes russeted; makes a beautiful tree. A heavy bearer, buttery, melting and sweet. A dependable cropper, and good market sort. October and November.

SECKEL

Small; rich, yellowish-brown; one of the best flavored pears known; very productive. September and October.

FLEMISH BEAUTY

Large, juicy, melting and rich, a strong grower and good bearer; very hardy but prefers sunny situation. September and October.

WORDEN-SECKEL

This beautiful and desirable russeted sneck is an attractive wide spread when introduced recently. In quality it is far above the rest. It is much larger than Seckel, it is named after Bartlett, but is not as large. October.

DOUGLAS

Resistance to Blight, Extreme Hardiness and Heavy Producing Tree. Winter hardy, with heavy production. December to February.

The cultivation of Dwarf Pears is very profitable. The trees are low-headed and the fruit is easily handled and comes into bearing usually the second or third year. We recommend the following varieties to be good growers and bearers and to give the best satisfaction as dwarfs:

SECKEL

Duchess

Clapp’s Favorite

Bartlett

(For description of these varieties see Stand. Pear).

NUT TREES

Combine Profits, Pleasure and Beautiful Ornamental Shade by Planting
Bountiful Ridge Grafted Walnut and Pecan Trees

Our Pecans and Walnuts Are All Grafted—This Means Early Bearing

All our Pecan trees are grafted so as to give uniform type pecans and bring them into bearing at an early age. We recommend seedling pecan trees at any price.

Write for special prices on lots of 40 trees or more.

SCHLEY PECAN

Of all the varieties of this luscious and valuable nut family, the Schley and Stuart stand at the head of the list. The Schley is a thrifty, strong grower; nuts long, well filled, with a very thin paper-like shell. Trees 3 to 4 feet, $1.25 each; $16.00 for 10; trees 2 to 3 feet, $1.00 each; $9.00 for 10.

STUART PECAN

Probably the best known and most valuable of all the Pecans. Extremely hardy and a strong grower. Nuts of good size and well filled. Shell very thin and easily opened. Trees 3 to 4 feet, $1.25 each; $10.00 for 10; trees 2 to 3 feet, $1.00 each; $9.00 for 10.

SUCCESS

Nut large and oblong. Shell thin, easily opened. Kernels of the trees are plump and of fine quality. Bears young and consistently. Widely used for pollinization purposes in commercial plantings. Trees 3 to 4 feet, $1.25 each; $10.00 for 10; trees 2 to 3 feet, $1.00 each; $9.00 for 10 trees.

YOU HAVE THE BEST IN BOUNTIFUL

GRAFTED, QUICK BEARING BLACK WALNUT

"THAR'S GOLD IN THEM THAR HILLS" When you have them planted in Bountiful Ridge GRAFTED SELECTED BLACK WALNUTS. Each year proves the wisdom of making liberal plantings of the better Black Walnuts for Nut and Wood Value.

BENGE BLACK WALNUT

A special selected variety of Black Walnut having unusual merits; being very large and having few divisions in the nut. These trees are grafted on Black Walnut seedlings. 3 to 4 ft. trees, $1.00 each; $9.00 for 10 trees.

THOMAS BLACK WALNUT

One of the finest Black Walnuts yet found and of the best quality. Kernels large, light-colored; nearly all crack out in whole halves. Tree extremely vigorous and hardy. All trees we sell of this variety are grafted so they reproduce true-to-type. Prices: 3 to 4 ft., $1.00 each; $9.00 for 10; 4 to 5 ft., $1.25 each; $11.00 for 10.

STABLER BLACK WALNUT

Rated as one of the best of the commercial black walnuts. Preferred by some to the Thomas although not quite so large. Comparative thin shell with few divisions. Kernels large, good color and excellent quality. The tree is vigorous, hardy, and a good producer. These trees are grafted on common black walnut root stock. Prices: 3 to 4 ft., $1.00 each; $9.00 for 10; 4 to 5 ft., $1.25 each; $11.00 for 10.

MAGNOLIA FIG

One of the hardest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June and continues to put on new fruit until frost.

BROWN TURKEY

Very hardy, dwarfish and prolific. Fruit medium to large, pear shaped, skin copper brown, flesh white, sugar to pink, quality good.

CELESTE

Most widely planted of all figs in the southeastern fig areas. It is hardy and can be grown where less hardy varieties fail. All trees are medium in size, pear shaped, skin violet, flesh white to rose color, firm, juicy, sweet and of excellent quality; ripens early.

EVERBEARING TYPE

Characteristics similar to the Brown Turkey, otherwise it starts to bearing in the season and continues to bear fruit throughout the growing season into late fall. This variety is very attractive as to bush and is used much for ornamental purposes.

Prices all Fig Varieties:

2 to 3 feet, 60c each; $5.00 for 10.

JAPANESE PERSIMMON

The Japanese persimmon is adapted to most regions in the south and can be raised successfully as far north as Penna. The trees are vigorous of growth and bear young, the fruit is well known in the markets and commands good prices. We offer two of the most popular varieties.

YEMON

Fruit is large to very large, bright yellow and generally seedless. Flavor is brisk and very good. Skin is smooth without any tinge of red.

ANNA-NASHI

Large to very large, conical in shape. Light yellow changing to red as the fruit ripens. Flesh is astringent until fully ripe when it acquires a delightful flavor that is characteristic of the fruit.

Price: 3 to 4 feet, 60c each; $5.00 for 10.
"Grapes Hit The Come Back Trail!"

No other fruit will grow successfully on so many different soils and under different climatic conditions as the grape, and the grower who produces consistent and profitable crops is the Grape grower.

PLANT IN 1941 TO MAINTAIN GRAPE PRODUCTION FOR THE FUTURE.

This season has demonstrated that grape production has again become one of our most profitable fruits to grow. Throughout the grape producing areas fruit brought fair prices and profits to the growers. We list here the grape for every purpose; be it for dessert, juice, or wine. Plants will not be plentiful this year and we advise early buying to avoid dis- appointment; however, we will do our best to offer our patrons these splendid vines at LOW PRICES.

IVES The vine is hardy, healthy, vigorous and fruitful. One of the most popular grapes in cultivation for making red wine. The fruit colors long before ripe. The bunches are compact and well-formed. Very attractive. Jet black with heavy bloom.

MOORE'S EARLY (Black) Early black: similar to Concord in looks and quality and ripens about two weeks earlier. Has a peculiarly sweet flavor all its own. Vines are healthy, vigorous, hardy and heavy bearers.

NIAGARA Occupies the same position Concord has in the white varieties as Concord among the black. Bunch and berries are large, greenish-white color, and have few relays when fully ripe. Skin thin but tough; quality much like the Concord.

AGAWAM Bunch large, berry large, reddish, bright, tender, vinous and of excellent flavor. Very vigorous and productive. Vine hardy and one of the best in its class.

DELWARE One of the highest qualified grapes available for cultivation. Adapts itself readily to various soil conditions. Matures its crop early. Has very attractive appearance. Keep and thrive well and is immune to many of the black diseases. Clusters are well shouldered, compact. Berries are uniform light red in color and firm.

CONCORD The standard commercial grape. The old reliable Concord—the standard by which all the other black grapes are judged—a lifetime money-making red wine grape. Other varieties grown, no vineyard or arbor is complete without a liberal planting of Concordos. Our Concord vines are well rooted and are guaranteed to produce, without fail, bringing immense profits, producing huge bunches of deepest purple grapes of very fine flavor.

CATAWABA Bunches medium, shouldered; berries large, deep coppery-red, becoming purple when ripe; flesh somewhat pulpy; juice, very aromatic and rich.

WORDEN Seeding of the Concord, which it greatly resembles in appearance and flavor, but the berries are larger. The fruit is said to be better flavored and to ripen several days earlier. These qualities will give it the foremost range among native grapes.

CÁCO (Red) This new grape is of the highest quality, being so rich in sugar and excellent flavor it can be eaten two weeks before it is ripe. The grapes are very large, bunches good size, compact and good form. The vines are strong growers, hardy and prolific. Ripens one week before Concord.

FREDONIA Givens promise of being the earliest and finest black grape. The vine is vigorous, hardy, and productive, and ripens its fruit two weeks earlier than Worden. The clusters are medium size and compact. The berries are large and round; the skin is thick and tough; the flesh is juicy, solid but tender, and very aromatic; and the juice is delicious. Concord wines and certificates.

SHERIDAN A promising late-keeping grape to extend the Concord season. Under favorable conditions it ripens about the same time as other vigorous, healthy and more productive than Concord. The bunches are large and compact; the berries are large and very firm; the skin is thicker; the flesh is juicer than Concord. Ripens two weeks later than Concord.

MOORE'S DIAMOND An early white grape and a rarity in many sections. Berries are medium size, good quality and excellent for grape juice. Very hardy and productive.

PORTLAND Holds first place among grapes as an early green variety. Vine very vigorous, hardy and healthy. Bunches and berries larger than any other green grape. Very fine quality.
Plant Bountiful Ridge Selected

BLUEBERRIES

The berries are truly "TOPS" as fresh fruit any way they are served. By following our cultural directions they can be grown in all sections of the country, North—East—South—West.

THE BLUEBERRY PLANT IS A THING OF BEAUTY IN ANY ORNAMENTAL PLANTING. Its varied bark colors, its unique foliage rivaling the Dogwood during the Fall season in beautiful colors.

WHAT OTHER PLANT CAN YOU SELECT THAT OFFERS YOU SO MUCH?

SENSATIONAL BOUNTIFUL RIDGE PRICE REDUCTIONS PUT OUR SELECTED BEARING SIZE BLUEBERRY PLANTS WITHIN THE REACH OF EVERY PLANTER.

The Aristocrat of the bush berry Family. Beautiful — Delicious — Profitable.

The large cultivated Blueberry seemingly has unlimited possibilities as a fresh fruit or a canned berry. They have a place in every farm and home garden lot. We list below the best of our present day varieties.

Blueberries require an acid soil containing an abundance of peat moss or partially rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage.

Where natural Blueberry soil is not available ideal conditions can be created by mixing with the surface soil a liberal quantity of leaf mold or partially rotted manure, or chipped leaves from an old woodpile.

Two varieties should be ordered to give proper pollination.

Complete cultural directions mailed upon request.

Note: Varieties listed in order of ripening. First fruit picked in south New Jersey usually about June 15th to 20th.

CABOT One of the earliest of the blueberries. Very vigorous and develops naturally to well formed plants. A favorite of the commercial grower because of its earliness, its dependable heavy bearing habits and the large size of its well formed berries.

RANCOCAS The bush of slender, vigorous, up right habit rarely surpasses five feet in height. The winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

STANLEY A recent development fast being recognized in New Jersey Blueberry sections as one of the outstanding Blueberries. Vigorous plants, large berries, very productive. Supply limited.

PIONEER Named by Dr. Coville of the U. S. Department of Agriculture. The bushes are stocky, seldom exceeding 4 feet in height with a tendency to be broad rather than tall. Its stems are stiff and the winter color of the young growth is a delightful red. Pioneer produces heavy crops of berries close set in the cluster. They are larger than Rubel, of medium blue color and fine flavor.

CONCORD The bush is of upright habit and at maturity exceeds six feet in height. The young growth is bright red in winter. The berries are large, frequently reaching three-quarters of an inch in diameter. They usually ripen a few days earlier than Rubel and have a fine color.

RUBEL Well developed bushes stand six feet or more high, vigorous and beautiful. The stems are slender, but sturdy. The winter color of the young wood is a rich red. The large berries are of a fine blue color. Planted extensively for commercial fruit production.

JERSEY The bush is of vigorous habit and grows very large. The winter color of the young growth is a light red over golden brown. The berries are the largest of any here listed, of a very light blue color and ripen about the same time as Rubel.

Our "Economy" Rooted Cutting Blueberry Plants

On large commercial plantings, where the first cost is a consideration we suggest our 1 yr. rooted cutting plants.

WE CAN SUPPLY THEM IN ALL VARIETIES LISTED.

We suggest from six to eight plants for a family of 5 people. Ask for and follow our free cultural directions. Plant our Blueberries this year for pleasure and profit.

Note: Be sure and buy your Blueberry plants by graded height and age rather than by age alone. The plants we offer above are bearing age.

A typical cluster of the large cultivated Blueberry. Many berries on this cluster measured 3/4 in. Numerous clusters such as these on each plant at fruiting time presents a thrilling and pleasing sight.
THE BOYSENBERRY — AMERICA'S GREAT VINE BERRY

The New Boysenberry

NOW TAKES ITS PLACE AS ONE OF OUR GREATEST VINE BERRIES FOR NEARBY MARKETS. EACH SUCCEEDING YEAR FINDS IT GAINING IN POPULARITY.

GROWERS NORTH AND SOUTH SAY IT IS FAST ELIMINATING OTHER SIMILAR BERRIES. HEAVY PRODUCTION—IMMENSE SIZE—EXQUISITE FLAVOR AND HIGH MARKET VALUE COMBINE TO MAKE IT A GENERAL FAVORITE.

Start Your Boysenberry Patch This Year With Bountiful Ridge Selected Plants.

SAID TO BE THE LARGEST AND FINEST VINE BERRY EVER INTRODUCED. The BOYSENBERRY is a new variety produced by crossing blackberries, raspberries, and Loganberries. The flavor is a very pleasing blend of these varieties. It has few and soft seeds. The plant is very vigorous and hardy, coming through in good condition, without injury, in temperatures as low as 15 below zero. THE BERRIES ARE EXTREMELY LARGE. MANY OF THE BERRIES GETTING MORE THAN 1 INCHES LONG AND OVER 1 INCH IN DIAMETER.

Unlike many kinds of large fruit, the BOYSENBERRY consistently produces heavy crops. IT COMES INTO GOOD BEARING THE NEXT YEAR AFTER PLANTING AND ONE PLANTING LASTS FOR MANY YEARS. It is a vigorous grower and should not be planted closer than six feet apart and succeeds better when trained on wires similar to grapes. THE FRUITING SEASON IS LONGER THAN MOST VINE BERRIES LASTING ABOUT TWO MONTHS. It is NOT UNUSUAL TO PICK BERRIES TO THE PLANT THE SECOND YEAR AFTER PLANTING. The plant seems to be especially resistant to drought conditions. WE RECOMMEND THAT YOU TRY THIS WONDERFUL BERRY A TRIAL FEELING THAT IT WILL PROVE A VALUABLE ADDITION TO YOUR PRESENT LIST OF SMALL FRUITS.

Refer to back cover page for color illustration.

Write for special prices on large quantities.

Large 2 Yr. Bearing Size Plants

We can offer a limited amount of strong 2 yr. plants at following rate: $0.25 each; 5 for $1.00; 10 for $1.50; 25 for $3.50; 100 for $11.00.

NOTE: The Boysenberry is proving very hardy, but we recommend plants being mulched where winter temperatures exceed 15 below zero.

Write for free cultural directions and follow our instructions.

RHUBARB

EASY PRODUCTION—LONG MARKET SEASON—FAIR PRICES—GOOD NET PROFITS RECOMMENDS RHUBARB TO EVERY MARKET GROWER.

MYATT'S LINNAEUS

The market growers choice.

Our stock seed plants are carefully selected and protected against cross pollination from inferior strains to assure you of getting large, colored rhubarb from the plants we sell.

Those who have never grown this variety, which is of superior quality, will hardly recognize the old "Pie Plant." It is an early, tender variety, without being in the least tough or stringy, with a mild sub-acid flavor and can be cut well into the summer. It leads in prices on our large commercial markets. We offer one year whole roots which are ideal crowns to give quick, lasting results.

Strong 1 yr. whole roots, 1 to 1/4 in. caliper. Each, 10c; 10, 90c; 25, $1.25; 50, $2.00; 100, $3.50; 500, $15.00; 1000, $23.00.

Strong 1 yr. whole roots, 1/4 to 1/2 in. caliper. Each, 12c; 10, 93c; 25, $1.50; 50, $2.50; 100, $4.25; 500, $15.00; 1000, $30.00.

MCDONALD RED

This fine New RED TYPE RHUBARB originating in Canada is generally recognized as one of the best of all RED RHUBARBs now offered. It is suitable for field growing or forcing. The plants are healthy, sturdy growers producing long deep red to pink ribs of very fine flavor. It can only be reproduced by divisions and plant prices are necessarily high but if a definite RED RHUBARB IS WANTED WE RECOMMEND THE MCDONALD.

Another Satisfied Customer

Bethesda, Md., Nov. 1, 1940

Dear Sirs:

We received in fine condition and so well packed, on Wednesday by express, Blueberries, Grapes, Asparagus, Strawberries. Very well pleased with everything.

Florence Ellwood
BLACKBERRIES

New Market Outlets Today Give Blackberries a Dominating Place in Profits From Small Berries.

WIDE GROWING RANGE—EASE OF PRODUCTION—HEAVY ANNUAL CROPS AND HIGH MARKET PRICES IN RECENT YEARS ARE REASONS EVERY MARKET GROWER SHOULD PLANT BLACKBERRIES AND DEWBERRIES THIS YEAR.

Bountiful Ridge heavy rooted cutting Blackberry plants will give quick results.

Our complete cultural directions on blackberries and dewberries will help you to succeed. Send for them.

Blackberries are among the best known and most valued of our berries. No fruit of any kind is more wholesome. A liberal use of blackberries and other good fruits will save doctor bills. Blackberries should be planted in rows 6 to 7 feet apart, 3 to 4 feet in the row. Keep the ground light, rich and clean, and pinch the cane’s tips back when they have reached three feet in height.

ELDORADO Large size, jet black, good shipper, best quality and unsurpassed productivity are the main characteristics of this splendid new sort. Most widely planted upright growing commercial blackberry of today.

BLOWERS Vine is vigorous and hardy; berries are very large; black, borne in clusters; ripens well together; sweet, melting and pleasant to the taste.

ALFRED One of the finest of all early Blackberries. Very productive, superior in quality, berries very large, and practically free from seed, very juicy. Plant is a thrifty grower being extremely hardy; bears young. Suitable for home or market use.

DEWBERRIES

LUZETIA Perfectly hardy and remarkably productive; said to be the best of this class of fruit; ripens early, is often 1½ inches long by 1 inch in diameter; sweet, juicy and melting. This variety is highly recommended.

AUSTIN’S DEWBERRY Fruit very large. Enormous bearer. The most productive market variety we have ever grown, and is 8 to 10 days ahead of any other. Strong and vigorous grower.

Prices: Strong No. 1 transplanted plants—$3.25 per 10; $2.75 per 25; $2.15 per 50; $8.25 per 100; $13.00 per 1000.

ASPARAGUS

EACH YEAR FINDS INCREASED DEMAND FOR ASPARAGUS FROM CANNERS AND HOUSEWIVES MAKING IT A DEPENDABLE SOURCE OF EARLY MONEY.

Increased sales and wider distribution of Bountiful Ridge Asparagus plants each year indicate the general and universal satisfaction our plants give the planter.

START YOUR COMMERCIAL FIELD OR HOME GARDEN NOW THIS YEAR WITH BOUNTIFUL RIDGE PLANTS.

We advise that you plant the rust-resistant varieties known as Washington, for they have proven the most profitable. They are the best for either home or commercial planting. A well cared for asparagus bed of a few thousand plants can always be depended on to bring you a good return and give you money when you need it during the early spring months. Send for our complete asparagus cultural directions.

Prices All Varieties: 2 yr. No. 1 roots $0.65; 3 yr. No. 1 roots $0.90; 4 yr. No. 1 roots $1.15; 5 yr. No. 1 roots $1.45; 3 yr. No. 1 roots $2.70; 4 yr. No. 1 roots $3.15; 5 yr. No. 1 roots $3.45; 6 yr. No. 1 roots $3.95.

Write for special prices on lots over 3,000 plants.

MARTHA WASHINGTON Very rust-resistant. The stalks are large, dark green, with a heavy purple overtone. The tips are tight and firm and do not open until well out of ground.

MARY WASHINGTON This is considered one of the best of the Washington kinds of Asparagus. It starts early and produces a heavy crop of very large, tender asparagus. Green in color and very good quality.

GIANT MARY WASHINGTON This strain of Washington asparagus seems to produce and will continue to produce heavier and over a longer period in the spring cutting season than any other type of Washington Asparagus.

A Full Market Size Bunch of our Giant Mary Washington Asparagus.
CUMBERLAND (Black)

THE CUMBERLAND CONTINUES TO BE THE UNIVERSAL BLACK RASPBERRY. Its popularity with the growers is unchallenged.

Cumberland has come down through the years and on its record stands as America's leading black raspberry. It is the choice of the commercial growers in the central and northern regions. One of the largest of the Black Caps; plants are healthy, vigorous growers, throwing up stout, well branched canes that produce immense crops of magnificent berries. The fruit is large and holds up well during the picking season; very firm and rated as one of the most delicious of the black caps.

BLACK BEAUTY

An unusual thrifty and disease resistant seedling Black Raspberry which originated on the farm of E. Cowen, Green County, Ohio, where it has been grown as a commercial variety for several years. It is a very thrifty grower and should be planted about 5 ft. apart. You will find it hardier than Cumberland and equally as productive as the Cumberland. The berries large, very black, have a little greyish bloom and the berry does not crumble. Up to the present time it has shown no mosaic, curl or streak, although planted close to infected beds. It has shown itself to be unusually resistant to Anthracose which alone should recommend it.

NEW LOGAN (Black)

One of the New Logan's outstanding characteristics is its resistance to mosaic and other raspberry diseases. It seems to outclass all other black raspberry varieties in this respect, and this is one of the primary reasons why it is gaining popularity. The berry ripens one week earlier than Cumberland. It is a heavier yielder and the glossy black berries are as large as that variety. It holds up well through drought, the last picking as fresh and free from seediness as the first.

A thrifty grower, and, although not as upright as Cumberland, our growers find this no objection if the summer shoots are topped higher than normal.

WEBSTER PURPLE RASPBERRY

We are indeed glad to offer this grand Purple Raspberry to our customers with a feeling that it will succeed for them and bring them profitable returns. We were compelled to discontinue offering the older varieties of the Purple Raspberries because of being so subject to various Cane plant diseases and many of the

Newer Purple varieties while more disease resistant were very poor quality. The Webster originated near Brant, N. Y., from a single plant. The fruit is very large and much superior to the old Columbia. In many ways the fruits resemble the New Sudus but are much less Tart and have that fine Purple Raspberry flavor. The plants are of medium vigor producing its fruit well in the open. Note prices on page 30.

SHUTTLEWORTH (Black)

We now offer the Shuttleworth as an improved type of the Plum Farmer making a welcome addition to our Black Raspberry listings. The Shuttleworth originated at Silver Creek, N. Y., on the berry farm of Mr. Shuttleworth who had been producing Plum Farmer for years. The plants are good thrifty growers, much more disease resistant than Plum Farmer. Fruit is large and attractive, excellent flavor and a heavier and more consistent bearer than Plum Farmer. It ripens earlier than Cumberland and in great Raspberry section of Western N. Y., ranks second in acreage of Black Raspberries being exceeded only by the Cumberland. Those who have grown Plum Farmer should especially welcome the Shuttleworth.

BOUNTIFUL RIDGE LOW PRICES ON ALL VARIETIES OF RASPBERRY PLANTS. ALL PLANTS TRIPLE INSPECTED AND STRICTLY NO. 1 GRADE OFFERED.

All Prices are net F. O. B. our Nursery. Special delivered prices quoted upon request.

RELIABLE SOURCE OF INCOME
Grapes, Rhubarb, and Asparagus Prove Consistent Profit-Makers for Growers

LATHAM (Red)
Leads all Red Raspberries in Commercial Planting and Profits to the Grower

The new mosaic free hardy red raspberry. Without question Latham is the most profitable Red Raspberry for commercial planting. It is absolutely hardy. It can not be surpassed in productiveness, our-yielding even Cuthbert. Due to its rich brilliant red color it sells readily on market stands, and in addition is a delightful table berry and almost perfect for canning. The berries are large, round and unusually firm, exceptionally well suited for shipping to distant markets. It ripens evenly over a very long season.

We have some of the finest Latham plants we have ever grown this year.

NEWBURG (Red)
Gaining in Popularity Each Year Because of Fine Quality and Heavy Production

Newburg, a cross between Newman and Herbert, seems to be a most promising variety. The fruit is large, very firm, does not crumble, and is superior to Latham in quality. The color is a bright, attractive red. In keeping and shipping quality it has no superior. The plants are vigorous, hardy, and very productive, in fact, the weight of the fruit is so great that the canes are often bent to the ground. The fruit is borne out in the open where it may be readily picked. It is necessary to support them with wire along each side of the row.

CHIEF (Red)
Disease Resistance, High Quality, Consistent Heavy Production Makes Chief Our Leading Early Red Raspberry

Ripening ten days before Latham, being equally as productive as the Latham and of better quality than the Latham, it should be in every small fruit grower’s planting. By using the Chief for an early red raspberry, Newburg for a mid-season and Latham for a late berry you have a combination that is bound to give you real profits. The Chief originating in the North is extremely hardy, very vigorous and especially resistant to mosaic. Our plants are unusually fine for the Chief this year and our prices are the same as for the Latham. Plant liberally of them.

TAYLOR RED RASPBERRY
Introduced by N. Y. Experimental station fall season of 1935. This beautiful berry should have the consideration of every commercial raspberry grower.

The plants are vigorous, hardy, productive, tall growing and make new plants rapidly. The sturdy canes hold the berries well off the ground. The berries ripen shortly before Latham, are large, long conic, bright attractive red, thick fleshy, very firm, sub-acid and of excellent quality being superior to Latham. The berries do not cling to the bush and carry well to markets.

MARCY RED RASPBERRY
Considered the Best of the Recently Introduced Reds. Hardy, Strong Canes, Immense Berries, That Don’t Crumble Are Making MARCY A Favorite.

Introduced by N. Y. Experimental station fall of 1936. Said to be the largest of all Red Raspberries.

This variety seems to be adapting itself better to southern growing conditions than the Taylor, proving more disease resistant and is worthy of trial in all sections.

The berries are very large, long conic in shape, firm, thick fleshy, medium red, mild in flavor and of excellent quality. The plants are tall, vigorous, healthy, hardy and make many new plants. The sturdy canes usually do not need support, bear fruit out in the open without facilitation of picking. The MARCY is worthy of planting for home use or commercial markets. Its immense size of berry, unusual vigor and productiveness should make this one of our great commercial berries of the future.

EVERBEARING RED RASPBERRIES
St. Regis Everbearing (Red Ramere)
The Old Standby of Everbearing Raspberries

The outstanding everbearing variety. It gives a crop of fruit all summer and autumn, fruiting on the old canes in generous quantities until late in August. By this time berries begin to ripen on the young canes and continue until late in autumn. Berries are a bright crimson of large size and of surprising quality; sugary with raspberry flavor. Without an equal and the dependable everbearing Raspberry.

The spring crop ripens before other varieties and in the South where it is grown extensively it yields a very heavy early crop and few berries in the fall. Noted for its disease resistance and ability to crop when planted in sandy soil. A fine market berry for all sections.

INDIAN SUMMER
Proving more satisfactory each year as it fruits over wider areas. Many are planting Indian Summer as a one crop variety because of its vigor, large size, fine flavored berries and ripening before Chief.

Introduced by the N. Y. Experimental station recently the Indian Summer seems to be meeting with general favor wherever planted. It is well adapted to home use and nearby commercial markets. The berries are much larger than any other so-called everbearing raspberry, roundish conic, slightly irregular, medium red, not too firm, crumble slightly and are excellent quality. The summer crop ripens very early, before Chief, the autumn crop from September on to frost. The plants are hardy, vigorous, about medium height, and bear heavy crops.

All prices of Raspberry plants on page 30.

A fair sample of our Well-Rooted Red Raspberry No. 1 plants. Plants such as these must give Results.

#### RASPBERRIES

**CUMBERLAND (Black)**

The CUMBERLAND CONTINUES TO BE THE STANDARD BLACK RASPBERRY. Its popularity with the consumer is unexcelled. It has withstood the test of time and is the choice of the commercial grower in the central and northern regions. One of the largest of the black raspberries, the CUMBERLAND plants are sturdy, vigorous growers, thrashing up stout, well-branched canes that produce immense crops of magnificent berries. The fruit is large, firm and heavy, and holds on well during the picking season; very firm and red to the center, the most delicious of the black caps.

**NEW LOGAN (Black)**

One of the New Logans' outstanding characteristics is its resistance to mosaic and other raspberry diseases. It seems to defeat all other black raspberry varieties in this regard, and is the first ideal primary variety which is resistant to mosaic. The berry ripens due to the late season of harvest. The fruit is large and firm, and the globose berries are as large as that variety. It is covered with a soft down, the last picking as fresh and free from soiliness as the first. A variety that we are looking forward to, as an extension to our line of black raspberries, and the most promising as a CUMBERLAND, our growers find this variety in the summer shoots. It is well adapted to southern growing conditions and to a large market.

**WEBSTER PURPLE RASPBERRY**

We are indeed glad to offer this grand Purple Rasberry for growing in the South. It ripens late and will succeed for the long growing season in the South. We believe it to be one of the best varieties of the Purple Raspberry because of its adaptation to the South's varied climate and many of the newer varieties which have been developed have all succumbed to some disease or pestilence, and many of the new varieties are not as productive as this variety. The Webster Purple Raspberry originated at Silver Creek, N.Y., on the berry farm of Mr. Webster, who had been producing Plum Farm for years. The plants are good thrifty growers, much more disease-resistant than Plum Farm. Fruit is large and attractive, excellent flavor and a heavy and more concentrated flavor than Plum Farm. It ripens about the same time as the Logan, and is considered one of the most Hardy and dependable varieties known. It is particularly suited for the southern conditions of the South and should be well adapted for the area.

**SHUTTLEWORTH (Black)**

We now offer the Shuttleworth as an improved type of the Plum Farmer making a welcome addition to our Black Raspberry list. The Shuttleworth originated at Silver Creek, N.Y., on the berry farm of Mr. Webster, who had been producing Plum Farm for years. The plants are good thrifty growers, much more disease-resistant than Plum Farm. Fruit is large and attractive, excellent flavor and a heavy and more concentrated flavor than Plum Farm. It ripens about the same time as the Logan, and is considered one of the most Hardy and dependable varieties known. It is particularly suited for the southern conditions of the South and should be well adapted for the area.

**LATHAM (Red)**

Leads all Red Raspberries in Commercial Planting and Profits to the Grower.

The new monastic, hardy, red raspberry, without question LATHAM is the most productive Red Raspberry for commercial planting, it is absolutely hardy, it can not be surpassed in productivity, out-yielding even the CUMBERLAND. Due to its rich, brilliant red color it sells readily on market stands, and in addition it is a delightful table berry and almost perfect for canning. The berries are large and unusually firm, excepting the very first picking. It ripens early, about August 1st. They are so large and firm that they make the perfect fruit on the table, and have some of the finest Lathams we have ever grown them.

**NEWBURG (Red)**

Gaining in Popularity Each Year Because of Fine Quality and Heavy Production.

Newburg is a cross between the Neuman and Herbert, seems to be a promising variety. The fruit is large and firm, and ripens about the same time as LATHAM, in quality it is a little better than the LATHAM and of better than equal quality than the Logan. Newburg has a combination in taste that is considered better than that of the Logan and is more like the LATHAM. Our plants are excellently fine for the fruit table, and are equal to or better than the Logan. We sell by the bushel.

**CHIEF (Red)**

Disease Resistance, High Quality, Consistent Heavy Production.

Chief is an early red raspberry, a very hardy variety. It is said to have a combination in taste that is considered better than the Logan and is more like the LATHAM. We sell by the bushel.

**TAYLOR RED RASPBERRY**

Considered the Best of the Recently Introduced Reds. Hardy and Vigorous, the New Variety. Don't Cramble Are Making MARCY A Favorite.

Introduced by N. Y. Experimental station fall season of 1936. Said to be the hardiest of all Red Raspberry varieties known. Said to be better than others under southern growing conditions than the Taylor, proving more disease resistant and worth of trials in all sections.

**MARCY RED RASPBERRY**

The Old Standby of Everbearing Raspberries.

St. Regis Everbearing (Red Ranere). The Old Standby of Everbearing Raspberries. It ripens early, about August 1st. It is a hardy variety. It ripens early, about the same time as Chief. Through the adoption of Western N. Y. ranks second in acreage of Everbearing red raspberry plants being used, only by the CUMBERLAND. Those who have grown Plum Farmer should especially welcome the Shuttleworth. It is a good thrifty grower, much more disease-resistant than Plum Farm. Fruit is large and attractive, excellent flavor and a heavy and more concentrated flavor than Plum Farm. It ripens about the same time as the Logan, and is considered one of the most Hardy and dependable varieties known. It is particularly suited for the southern conditions of the South and should be well adapted for the area.

**INDIAN SUMMER**

Proving more satisfactory each year as it fruits over wider zones. It ripens early, August 1st. It is one of the most productive of all Red Raspberry varieties. It ripens early, about the same time as Chief. Introduced by the N.Y. Experimental station recently for commercial planting and also as a variety for home use. It is a hardy variety, thrives in the hot southern markets. The berry is large, well balanced, and is a consistent red color, firm, rich, and of excellent quality. The seeder crop ripens very early, before the picking season. The fruit is black or maroon, somewhat firm, dark red, and of excellent quality. The seeder crop ripens very early, before the picking season. The fruit is black or maroon, somewhat firm, dark red, and of excellent quality. The seeder crop ripens very early, before the picking season. The fruit is black or maroon, somewhat firm, dark red, and of excellent quality.

IN THE YEARS OF LOW FARM INCOME STRAWBERRIES HAVE PROVEN THE GROWERS' MOST DEPENDABLE SOURCE OF INCOME. THEY REPRESENT A LOW INVESTMENT COST AND ARE KNOWN AS THE FARMERS' GREATEST EARLY MONEY CROP. THERE SHOULD BE A STRAWBERRY FIELD ON EVERY FARM.

Early Dug Bountiful Ridge Plants Placed In Cold Storage At Planting Time Answers the Planter's Problem of Getting 100% Results From Their New Plantings.

Through the cooperation of various state officials, this practice has passed the Experimental stage and is now recognized as one of the practical methods for the large commercial grower to handle his spring planting of Strawberry Plants. Plants dug early with full vitality, properly packed and held under proper storage, temperature, will be better and will produce more evenly than those planted later. A large number of adjoining fields at planting point. Plants handled in this manner can be kept many weeks until your soil and moisture conditions are ideal for planting. Heavy rains at planting time need not worry you any longer.

During the past three years we have handled nearly one million plants each season in this manner, in the great berry sections of New York, Pennsylvania, New Jersey, and Ohio. The average cost is about $5 per thousand for carrying these plants in storage. The cheapest insurance any planter can get.

Bountiful Ridge has led the way in this new method of handling plants and is an example of our alertness to the planter's needs. This practice should have the full consideration of every planter where storage facilities are available. It will be given detailed information upon request of how these plants should be handled in cold storage. This is an added Bountiful Ridge service, looking to greater satisfaction for the planter.

STRAWBERRY CULTURE

1. Location, Soil, and Preparation. Adequate soil moisture is essential to good strawberry production, therefore, in choosing a location, carefully consider whether the type soil selected holds moisture well. Also take care that natural water drainage is provided, for the strawberry is a root feeder. Frost pockets will not form late in the spring to freeze out the blossoms. Sites which are not affected by late frost are considered the best for strawberry culture. Plow and prepare the soil the same as for truck crops. Never plant in newly formed beds. In the Northern States white grub worms are always present in this type of soil and will do a lot of damage to the plants after being planted. The plants will not take root for a few weeks. Rye and crimson clover make splendid crops to work under as a natural humus soil builder. However, must be plowed or walked in far enough ahead of when the cover crop has plenty of time to decay before the plants are set.

2. Time to Plant. In the southern states from November to April is considered the best time for planting. March and April in the central states, and for the northern states, April and May are the best time. We cannot too strongly urge early planting. Set the plants just as soon as the ground is workable in the spring. Should a cold snap follow, it will not damage the plants if they are properly set, and by setting early, the plants will grow better and be more productive in every way.

3. Distance to Plant. We recommend that strawberry plants be planted in rows 3½-4 feet apart, spacing the plants 15 inches apart in the row, depending on the variety. Everbearing varieties should be planted 12-16 inches apart. For planting in rows 3½ feet apart and 18 inches apart in the rows, it requires 8,000 plants per acre, and in rows 4 feet apart and 18 inches in the row it requires 7,250 plants per acre.

4. Care of Plants on Arrival. Set plants immediately on arrival, if possible. However, if it is not convenient to do so, the plants should be removed from the package and dipped in water to allow roots to remain up before setting. If the plants become dried out in transit, then soak the roots in water up to the crowns for at least 3 hours. When this is done the plants should be set as soon as possible after being taken from the water, but in no case should the tops of the plants be wet when being set if the sun is shining, because very often the tops will scald and damage the plants materially. You are not able to plant immediately after the plants are watered, place the plants where they will be kept cool and cover the roots with moss; or dig a V-shaped trench, open the bundles, distribute the plants evenly in the trench, and cover them even with the surface of the ground and firm the soil. In this manner, they can be held until such a time as they are able to plant.

5. Stock to Plant. Our plants are strongly rooted with the finest type of fibrous roots that can be grown. We have developed our strawberry plant business on a large scale and have shipping plants by the millions complete. Our shipping season opens October 1 and continues until May 10 each year. Special prices will be given for cooperative groups and club orders.

NOTICE: In order to facilitate the movement of our strawberry plant orders, YOU WILL ALWAYS GET A PRIORITY ORDER FOR ANY STRAWBERRY PLANTS YOU ORDER AND YOUR STRAWBERRY PLANTS WILL BE SHIPPED IN TIMES OF SHORT ORDER IN ALL CASES. We do this because of the perishable nature of strawberry plants so do not feel alarmed if you get one part of your order and not the other at the same time. YOUR STRAWBERRY PLANTS WILL BE SHIPPED WHEN DIGGING CONDITIONS PERMIT AND ACCORDING TO YOUR DIRECTIONS AS NEAR AS POSSIBLE SO PLEASE STATE DEFINITELY IF YOU WILL HAVE PLANTS SHIPPED WHEN ENDING YOUR ORDER.

Our Complete Detailed Culture Directions Will Be Sent Upon Request.

OUR STATE INSPECTORS ISSUE US SPECIAL STRAWBERRY PLANT CERTIFICATE CERTIFYING OUR PLANTS ARE FREE FROM INJURIOUS DISEASES.

A certificate like this goes on all Strawberry plant shipments from Bountiful Ridge Nurseries. With existing plant diseases you cannot afford to take chances.

PLANT BOUNTIFUL RIDGE GROWN STRAWBERRY PLANTS THIS YEAR.

UNIVERSITY OF MARYLAND

College Park, Md.

STATE HORTICULTURAL DEPARTMENT

CERTIFICATE OF INSPECTION OF STRAWBERRY PLANTS

Duplicate of Number 2

This is to certify, that the STRAWBERRY NURSERY PLANTS OF THE BOUNTIFUL RIDGE NURSERY, Princess Anne, Md., have been inspected in accordance with the laws of Maryland, Chapter 282, Session Laws of 1939, governing the inspection and transportation of Strawberry plants within the State, and that said plants are free of all injurious insects and diseases, as well as all injurious insects and diseases, by inspection from the RED STEELE ROOT ROT and other dangerous injurious plant diseases and insect pests.

This certificate is valid until September 30, 1941, unless sooner revoked.

GEO. W. LANKFORD, CHIEF INSPECTOR
C. E. TEMPLE, STATE PATHOLOGIST
The South and Central East's Greatest Early Commercial Berry Now Offered In
A Yellows Free Resistant Strain

THE NEW YELLows FREE BLAKEMORE U. S. D. A. Strain

NO STRAWBERRY GROWER CAN NOW AFFORD TO PLANT THE OLD TYPE BLAKEMORE AND THIS GREAT COMMERCIAL BERRY WILL CONTINUE TO BE ONE OF THE GREAT BERRIES OF RECENT INTRODUCTION.

In the south and central berry areas the Blakemore berry has proved to be one of the finest of all early shipping berries. A cross between Premier and Missionary originated and introduced by the U. S. Department of Agriculture. Possibly no new variety has become so widely grown in so few years since introduction and proven so satisfactory as a commercial berry. The old type originally released showed a tendency to sport into inferior color and form, and several strains. NOW WE HAVE THE NEW YELLOWS FREE TYPE AND THE HEALTHY, VIGOROUS, FOYIAGE IS A PLEASING SIGHT TO THE BERRY GROWER. It is a very free plant maker and responds quickly to good treatment. It is an abundant bearer, the fruit averages large and retains its bright attractive red color even after being picked several days. Quality is superior to Missionary and Klondyke, but not equal to Premier. It will ripen a few days earlier than Premier. The foliage is healthy and vigorous. The plants hold up well during a drought. The berries are firm and flavored as a long distance shipping berry and preferred by all strawberry processing companies.

If your soil is only moderate in fertility PLANT BLAKEMORE and you are assured of a good set of plants for picking. Whether your soil is sandy or clay you can depend on Blakemore for better beds and producing fruit where many other varieties will fail for you.

Over 8000 Quarts to Acre of U.S.D.A. Strain Blakemore
15,000 Plants Set Yield Over 1000 Crates Berries

Dear Sirs: Crisfield, Md., June 16, 1940

I have already picked 918 24-qt. crates of Blakemore berries from the 15,000 plants bought of you last spring of the U.S.D.A. Yellows free strain Blakemore. I am picking again today, and have well over 1000 crates from the field. They are out-yielding any other type Blakemore in this section.

John American

"It Pays to Plant Bountiful Ridge Grown U.S.D.A. Yellows Free Strain Blakemore."

Fairmore
A Fairfax-Blakemore Cross Produces A Great Early Berry
Large Size—Good Quality—Firmness and Parentage

Recommends Fairmore for Extensive Trial by Berry Growers of the Central and Southern Areas

The Fairmore is a cross between Fairfax and Blakemore, and both of these being Premier crosses we find much of the heavy producing habits and fine quality of the Premier predominating in the Fairmore. Tests so far reveal it will produce heavier per plant than the Blakemore and Missionary. The berries are large, very firm, and have brought a premium on the N. C. market so far. The berry ripens early, about with Blakemore. When introduced it was not recommended for berry districts north of Norfolk, Va., but tests have proven it can be grown much farther North and having so much Premier parentage we recommend it be tried thoroughly in Southern Ohio, Penna., and Jersey berry sections.

Daybreak
A Fairfax-Missionary Cross and One of Our Earliest Berries Now in Production. Adapted to Far Western Growing Conditions

The Daybreak being a Fairfax-Missionary cross is well adapted and recommended for far southern berry sections, replacing the old Missionary as a home and market berry. Berries are large, a bright crimson color, not as dark as Fairfax but very fine quality. It ripens crop quickly and while so far in trial plantings it has produced about with Blakemore and Missionary, it is not considered a heavy producing variety. We don't feel Daybreak is adapted to Northern berry producing areas. Daybreak as its name indicates is among the first berries to ripen, being about one week earlier than Blakemore. This fact alone recommends the variety for trial.

Northstar

This is the largest berry we have observed which at the same time has commercial possibilities. Berries are very firm, light red color, very good quality, ripens with about Premier. It has proven a poor plant maker so far except under favorable soil and moisture conditions, but produces very heavy and is resistant to spring frosts. It can be recommended for the Central and Northern berry sections. The Northstar are real show berries—berries you will be proud to pick. Try them.

Mr. Guisler, Dutchess County, N. Y., gets 100% satisfaction with Bountiful Ridge berry plants each year. Mr. Guisler has used his plants for several years, he has tried them with plants grown in that section and transplanted the same day and finds our plants grown and handled the Bountiful Ridge way will give better fruiting beds and heavier yields. We say: "IT PAYS TO PLANT BOUNTIFUL RIDGE STRAWBERRY PLANTS".

33
Bountiful Ridge Small Berry Plants Are Superior

**PREMIER**

LEADS ALL STRAWBERRIES IN NORTHERN PRODUCING AREAS

AN OLD FAVORITE AND POSSIBLY THE WORLD’S GREATEST STRAWBERRY

FROST-PROOF, PRODUCTIVE AND DEPENDABLE

No strawberry ever introduced has brought the returns to the grower that the Premier has, and it still stands unchallenged as a real money-maker. It has a record very hard to equal as an early market berry, and we cannot say too many good things about it. Consider these important facts about Premier and you can readily understand why we say this about it. Until the introduction of the Blakemore it had no equal as a variety that would adapt itself to most all soil and climatic conditions, whether the soil was sandy, clay loam or rocky, whether it was planted in North Carolina, Mass., or Ill., you always had an abundance of new plants that were thrifty and disease-free. The land did not have to be rich. Of course, it will do better on good soils, but even on comparatively poor soil Premier always makes a showing for you. It can be considered almost frost-proof. It has never failed in a crop in this section since it was introduced. The berries average large and hold up well under heavy crops and unfavorable seasonal conditions; it ripens over a comparatively long period, from two to three weeks; the berries have an attractive bright red color and unusual quality that is only surpassed by Chesapeake and possibly Red Gold. It is moderately firm and will carry well to markets up to three hundred miles and further if handled properly. It is the best of the tried and proven early varieties. As assurance of next year’s income, plant in acre or more of Bountiful Ridge grown Premier this spring.

Mr. Smith has been using Bountiful Ridge plants for several years and finds them superior and giving maximum yields. In spite of the unfavorable moisture conditions in 1940 this field of Premier made over 8000 quarts to the acre. He can and does command the best market prices for berries such as these grown from Bountiful Ridge Heavy Producing Strain of Premier.

**DORSETT**

THE BERRY SUPREME

One of The Best of The Recently Introduced Berries. Proving the Ideal Commercial Berry. Combining Vigorousness, Productiveness and Quality.

Released for introduction by the U. S. Department of Agriculture spring of 1933. The Dorsett surely makes a worthy companion for the Fairfax as each of them seem to have their advantages. The foliage of Dorsett resembles that of Blakemore to some extent, apparently not being as vigorous as Fairfax but equally as resistant to diseases. The foliage and fruiting stems are more erect than Premier and it is a free plant maker. The fruit is usually conic in shape. The color is bright red similar to Blakemore. The berries will average much larger than Blakemore although not quite so large as Fairfax. The flavor of Dorsett is not equal to Fairfax but superior to other Early berries and can be classed among the best. The Dorsett is not as firm as the Fairfax but is equal to Premier so should be a good commercial variety because of its productiveness, attractive color, and excellent quality for an early berry.

**FAIRFAX**

ARISTOCRATIC RIVAL OF THE DORSETT

They Are Truly Magnificent—Examples of Productiveness and Wonderful Quality

Released for introduction by the U. S. Department of Agriculture spring of 1933 we predicted the Fairfax to be a great success and it has fulfilled our prediction. It has proved all that has been claimed for it and no grower of strawberries can afford to be without them. The foliage and fruit stems extend well above the ground which tends to give the fruit a better chance for making the fruit more uniform. The Fairfax ripens about the same time as Premier, and its fruiting season extends over a long period. The quality of the Fairfax is equal to the best of our older varieties. The berries are large to very large, of a bright red color at picking time. Like the Bellmar it turns dark after being picked for several days but retains its flavor and firmness. The Fairfax should be planted for both home and commercial use.
PATHFINDER

VERY RESISTANT TO ROOT DISEASES HAS COMMERCIAL POSSIBILITIES

Originating at N. J. Experimental Station as the result of a cross between Premier and Aberdeen and formerly known as N. J. No. 55. Ripens about 3 days after Premier. The berries are regular, roundish cone in shape, medium to large in size, bright red in color, brisk sub-acid flavor with a quality rating of good. The plants are very vigorous and productive and thrive on heavy, damp soil with plenty of moisture. Should be tried out in all berry growing sections but indications are that it will do best from central Jersey north or anywhere Premier can be grown successfully.

NANCY LEE A seedling of our own with unknown parentage. It has many of the characteristics of the Premier and Aroma. We have tested it thoroughly in the Nursery and its main points of merit are its unusual thriftiness and resistance to all diseases; its ability to crop under most trying conditions; its resistance to frost injury; its productivity and superior quality of fruit. Early berries we have tested. It starts ripening a week before Premier and continues to give an abundance of Berries for nearly a month. The berries average large to very large, most of them having a double cap. It is shaped like the Premier and produces its berries near the ground like Premier.

KLONDYKE The old standby for shipping to distant markets and is still grown extensively in Alabama, the Carolina's, Tenn. and Arkansas. Berries are medium to large, attractive red, flesh very firm, and red to the core, and one of the best shipping berries ever grown. Medium in quality, a good plant maker and yields good crops. Very early.

MISSIONARY The leading berry of the south for several years. Popular because of its ability to thrive on sandy soil as well as on loamy soils; its thriftiness and productivity of medium to large berries, which are dark red and very firm. It will carry to distant markets and is a favorite of the "cold pack" and "juice" men. It will possibly be replaced entirely by the Blakemore in a few years.

Bountiful Ridge Strain PREMIER (and there is a difference) Go to the Hershey Ice Cream factories in Penn., as grown by Mr. Smith they are "tops" in flavor. Picked carefully and packed right they are on their way in a few hours and bring highest market prices.

SEEN. DUNLAP (Dr. Burrell). An old-time universal favorite of the Warfield type berry. Conseed to be the same as the Dr. Burrell. Makes abundance of thrifty plants even under adverse soil and climatic conditions. Very productive of medium-size berries of average quality.

DR. BURRELL Same as Senator Dunlap. For description see Senator Dunlap.

DRESDEN RELEASB BY GEO. M. SLATE. THE ORIGINATOR OF THE CATSKILL AND TESTS SHOW IT TO HAVE MANY POINTS TO RECOMMEND IT FOR NORTHERN DISTRICTS.

Reports coming from Conn. where Dresden originated claim yields as high as 10,000 quarts to the acre. This is hard to believe but being a fine large berry of good quality and good plants we surely recommend it for trial in the northern berry areas. Mr. Slate who introduced the Catskill knows berries and it looks as though he has a rival for the Catskill in the Dresden. Berries ripen just before Catskill, are mostly conic to wedge shaped, rich strawberry color moderately firm and fair to good quality. Plant some Dresden for trial this year.

CATSKILL

ONE OF THE MOST SUCCESSFUL MID-SEASON BERRIES OF RECENT INTRODUCTION

IT HAS PROVED ITS RIGHT AS A LEADER OF MID-SEASON VARIETIES

A vigorous grower; somewhat frost resistant, extremely productive, equaling Dorsett and Premier; berries very large, firm and of good quality.

The Catskill is a product of the New York Experiment Station, being a cross between Marshall and Premier. It has proved up under test for the past six years and is now recognized as one of the best mid-season berries in cultivation. The foliage is healthy in this latitude. It is a good plant maker and has proved to be extremely productive. The berries are large as Big Joe and Chesapeake and of good quality although not rated quite up to Premier and Fairfax. We strongly recommend Catskill for this and more Northerly sections.

ABERDEEN A comparatively new variety. The plant show unusual thriftiness, making abundance of new plants. The Aberdeen is unusually productive, equaling or surpassing the Premier. The berries will average larger than Premier, being somewhat pointed in shape, and most every berry is perfect in shape. Its ripening period extends from two to three weeks.

AROMA One of the best for its season, following closely on the Big Joe. The plant is very thrifty, and readily adapts itself wherever it is planted. The fruit is medium to late, dark bright red, the color carrying through the berry. It is firm and a good shipper. It is a good plant maker and very productive, the blossoms being very resistant to frost injury.
BIG JOE

OUR MOST POPULAR MID-SEASON BERRY

A Beautiful Berry—A Money-Maker

No other mid-season berry has stood the test of varied soil and climatic conditions so well as the Big Joe. It has been subjected to for the past twenty years and come through with the fine record it has for general hardiness, productiveness and being a profitable berry to grow. It will withstand as much rough treatment as any variety we know and come through. It is a very large, attractive, dark bright red berry that will sell on any market. It can always be depended on to make a good set of plants and come through with a crop, a combination which makes it one of the most popular and profitable berries to grow.

CHESAPEAKE

QUALITY • BEAUTY • PRODUCTIVE

A THREE POINT WINNER

Given Good Care No Other Late Berry Will Equal It

It will not stand abuse, seeming to do best in dark, loamy soil and heavier soils where there is plenty of moisture. It will thrive on well tilled new land. Like the Premier, it is about frost-proof and bears abundant crops of large, healthy foliage. The berries are large and attractive, being superior in quality. The berry is very firm, so you can ship it to distant markets.

WILLIAM BELT

This variety is the standard of excellence for late capping berries. Berries average large in size, being somewhat irregular in shape, having an attractive cap, and the berries themselves are a bright, glossy red, which makes them very handsome. On any market where quality and appearance predominate among the buyers the Wm. Belt will prove a good money-maker for the grower.

CULVER

A product of the New York Experiment Station. We consider it the best of the late berries which they have released. It is a good plant maker; not so susceptible to leaf spot. The berries are very large, bright red color and excellent quality, and seemed quite firm here with us in our test block.

LUPTON

A WORTHY RIVAL OF CHESAPEAKE

A fancy late shipping berry similar to Chesapeake in size and appearance but does not have the quality the Chesapeake has. We recommend it when you can satisfy the beds of plants of Chesapeake, because the Lupton will do equally well on most soils, making an abundance of plants and being a vigorous grower, and can always depend on a good crop of Lupton berries.

PEARL

A very late variety recommended to replace Gandy which it resembles very closely in both fruit and plant. More dependable for a crop than Gandy. The berries are large, rich red color. Brisk acid in flavor and carry well to markets. Proving a favorite late berry in many of the northern districts.

EVERBEARING STRAWBERRIES

BIG, LUSCIOUS BERRIES THRU LATE SUMMER AND FALL PAY BIG PROFITS TO THE COMMERCIAL AND HOME GARDEN GROWER

THE GIANT

MASTODON

STILL REIGNS AS KING OF ALL EVERBEARING STRAWBERRIES

Harvest a crop three months after planting the plants and continue to pick the berries till frost comes. A few thousand Mastodon plants planted on good soil and cared for means an independent income. They require good, fertile soil, and if given this and good cultivation they will delight you with a fine crop of large, beautiful luscious berries. Our stock of Mastodon plants are genuine and selected for productiveness.

This variety is supreme among all ever-bearing varieties even as the Premier is supreme among the early spring bearing varieties. It outyielded some of our best June bearing sorts during their season and continues to bear throughout summer and fall berries of amazing size and superior quality, being very firm and attractive. For best results newly set plants should be thinned up to July 1st. They will then bear very successfully by hill culture methods as well as by wide bed row system. Where hill culture is practiced, set the plants 15 inches apart in the row and have rows from 3 to 4 feet apart. This produces strong, robust hills that produce very heavily.

GEM

A NEW AND OUTSTANDING EVERBEARER

The most promising of all ever-bearing varieties recently introduced. Coming from the Middle West, it has adapted itself to our conditions on the Eastern Shore very readily. We find it to be an excellent plant maker, very productive. Berries are large and are real beauties of excellent quality. This is the Mastodon’s closest rival. We can recommend it for trial.

Mr. Lawrence is well satisfied with his berry fields for 1946. All planted with Bountiful Ridge Plants. Mr. Lawrence says they are the best after trying them several years. Good plants properly dug and handled is a good start, then Mr. Lawrence did his part to produce fine fruiting beds for 1941 berry season. This is only one of many fine fields grown from Bountiful Ridge Plants in the great berry sections of Columbia and Dutchess Counties, N. Y.
"THE STAMP OF QUALITY"

This seal on the label of your Strawberry plants indicates they are Bountiful Ridge grown and is your guarantee of True-To-Name, Productivity, and Disease Resistant. Bountiful Ridge Plants are grown with extreme care, dug carefully without exposure, properly cleaned and packed in fresh clean moss so as to carry to all planting sections in the best of condition and are FAMOUS FOR GROWTH AND PRODUCTIVENESS.

OUR NEW PRICES FOR ALL VARIETIES OF STRAWBERRY PLANTS

ALL PLANTS GUARANTEED TO BE OF FIRST QUALITY, TRUE-NAME AND FREE FROM ALL INJURIOUS DISEASES. Note our Special Plant Certificate on Page 32.

Plant a field of Strawberries this Spring for a guaranteed income next Spring. Write to us if you are interested in making a large planting for special quotation. Prepaid rates quoted to any place on request. Submit quantity and variety, and we will give delivered price on all planting needs so that you may know the exact cost. Samples gladly submitted if interested in large quantities. All plants are field grown.

All Prices Net, No Discount For Cash With Order. Prices are F.O.B. Princess Anne, Md.

SPECIAL PRICES QUOTED ON 7000 PLANTS OR MORE.

"PLANTS ARE COVERED TO PREVENT WINTER INJURY TO CROWS"

Investigations over a period of years have proven that many strawberry plants are injured in the crown by sudden low temperatures in early winter and by extreme low temperatures during the winter. This injury is not severe enough to kill the plants but reduces directly in the growth and productiveness of the plants the following summer. Plants GROWN IN THIS IMMEDIATE SECTION HAVE Seldom shown serious injury of this kind, due to our field being an important reason why you can secure the best plants available here at Princess Anne. As an extra precaution for the benefit of our customers however, we are covering each year several hundred thousand plants of all kinds of the main varieties. As a result our customers will get absolutely uninjured Thrifty Plants for their plantings when requested. Plants dug and distributed from our covered plant fields have given up until this season. We are compelled to charge a little extra for these plants. This added cost however is very small and we ask that you submit your list of varieties and quantities for special quotations on this type stock.

The boreal plant situation will always lead in protection methods that will insure greater success to those who plant their stock.

Kemp's Bountiful Sure Crop Yellow Dent Field Corn

BECOMING MORE AND MORE POPULAR AS IT IS PLANTED OVER A WIDER AREA.
THE REAL VALUE OF THIS CORN IS IN ITS ABILITY TO GIVE YOU A CROP
UNDER NORMAL TO ADVERSE CONDITIONS.

One Penna. Grower reports 100% greater yield than Lancaster Sure Crop. Another Penna. 4H Club boy took a State wide prize for yield, in 1939.

ORIGIN. Mr. Geo. W. Kemp, General Manager of our nursery, has been selecting to a type of corn after making a definite cross of Reid's Yellow Dent and the Mammoth Yellow Dent. His efforts were rewarded with almost 100% reproduction to type, at the same time giving a medium-sized stalk that produces to a maximum under all conditions. The ears are produced from three to five feet from the ground on the stalk and under good growing conditions will run largely to two well-developed ears to the stalk. We have never given this corn much fertilization, trying to instill in it the habit of producing a maximum corn on just average soil, and this we have succeeded in doing. It can be termed as a 100% corn and will do equal as well on practically all types of soil. The ears average long, with small to medium-sized cob and very deep grain.

We sell only the shelled corn for seed. All ears are carefully selected and the end grains shelled off before shipment to you. It is tested for germination, which insures you of good stands. Rest assured the corn is right, or the Bountiful Ridge Nurseries would not offer it to you.

Peck, 75c; 1/2 bu., $1.25; 1 bu., $2.00; 3 bu., $3.50.
Prices f.o.b Princess Anne, Md.

Black Wilson Soy Beans

One of the Central and Northern District's Greatest
HAY and SOIL IMPROVEMENT CROPS

Widely planted in the Central and Northern areas for hay and soil improvement. Especially desirable for planting in orchards as green manure crop. Thrives on wide variety of soils and matures crop quickly. Will make good hay crop in 90 to 100 days after planting and mature beans in 100 to 120 days. Upright growth. Average soils making 2½ to 3 ft. height. Stalks light, carrying good foliage. Some say it is better than Alfalfa for hay, especially dairy cattle feeding. Should be cut just as bean forms for hay. We have used the Black Wilson almost exclusively as a soil improvement crop here at Bountiful Ridge and seed offered is our own growing, GERMINATION TESTED SEED. Sow 1½ to 2 Bu. to acre for hay and green manure crop.

$1.00 peck; $ .85 ½ bu.; $1.70 per bu.; $7.50 for 5 bu.
All prices net f.o.b. Princess Anne. Let us quote you on larger lots.

ORNAMENTAL HEDGES

REAL BEAUTY AND DISTINCTION AT LOW COST

THIS IS WHAT YOU CAN HAVE BY PLANTING JUDICIOUSLY THE HEDGE PLANTS WE OFFER YOU HERE.

THERE IS A PLANT FOR EVERY PURPOSE, SELECT THEM AND PLANT THEM AT THESE LOW PRICES.

NEW RED LEAF BARBERRY. Similar to Barberry Thunbergi but the foliage of this new variety is of a rich, lustrous bronze red. Becomes more brilliant throughout the summer. 6 to 9 in. seedlings, 10 for $1.00; 100 for $8.00; 12 to 15 in. transplants, 10 for $2.25; 100 for $39.00; 15 to 18 in. transplants, 10 for $2.50; 100 for $35.00.

JAPANESE BARBERRY. A pretty dwarf species. Handsome foliage of bright coppery red and orange in autumn and which remain on until late Fall. Lined with small scarlet berries which hang on until well into winter. 9 to 12 in. seedlings, 10 for $3.50; 100 for $39.00; 12 to 15 in. transplants, 10 for $4.25; 100 for $42.00; 1000 for $180.00, 15 to 18 in. transplants, 10 for $5.00; 100 for $29.00; 1000 for $180.00.

AMOOR RIVER PRIVET NORTH. A valuable ornamental shrub for hedges and borders; very hardy; foliage glossy green, all holds its color almost the entire year; will stand shearing to any extent or branched. 12 to 18 in., 10 for 50c; 100 for $3.00; 1000 for $35.00; 18 to 24 in., 10 for 75c; 100 for $4.00; 1000 for $180.00.

CALIFORNIA PRIVET. California Privet will give you living fences for less than you can build them of wire. Can be sheared into any shape or size. 12 to 18 inches, 40c per 10; $3.00 per 100; $23.00 per 1000; 18 to 24 inches, 60c per 10; $4.00 per 100; $35.00 per 1000.

Nothing can quite take the place of Hedging for outlining formal beds and property lines.

PEONIES
OUR PEONY LISTINGS THIS YEAR
RATE WITH THE BEST
You Have Here Beauty For Home And Commercial Planting;
Size and Form of Blossom. Hardy, Profuse Blooming Types, Priced Economically for Fine, Disease Free, 3 to 5 Eye Divisions.
Group No. 1
Prices all varieties in this group your choice.
35c each; 3 for $1.00; 10 for $3.00.
Alsace Lorraine. Double. Pure white. Late Mid-season.
Avalanche. Double. Blush white. Late Mid-season.
Baroness Schroeder. Double. Flesh white. Late mid-season.
Georgiana Shaylor. Double. Rose pink. Late mid-season.
Madame Emilie Galle. Double. Rose pink. Late.
Sarah Bernhardt. Double. Dark pink. Late.
Group No. 2
Prices all varieties in this group your selection.
50c each; 3 for $1.25; 10 for $3.50.
All Burgundy. Double. Deep crimson. Late.
Very desirable.
Tourangelle. Double. Pale cream white. Late. None better.

DWARF CANNAS
All roots strong 2 and 3 eye divisions, 10c each; 50c each; $3.50 for 10; $7.00 per 100.
YELLOW KING HUMBERT. A sport of King Humbert but with green foliage and golden-yellow flowers. Occasionally there will be plants with bronze foliage and scarlet flowers.
KING HUMBERT. Truly the King of Cannas. Its foliage, which is of large size and a deep bronze, is striking. Flowers are borne in great profusion and are a rich coppery scarlet.
KING MIDAS. Finest yellow canna to date. Large heads of pure golden yellow. Vigorous grower.
THE PRESIDENT. Has no competitor as a red canna. The color is a rich glowing scarlet, flowers often 7 inches across on strong, erect stems well above the foliage. Foliage rich green.
FLORENCE VAUGHN. Medium height. Flowers yellow with red spots on petals and red throat. Green foliage.
MADAM CROZY. Dwarf habits. Flowers rich red with yellow edge, green foliage. Fine for border work.
GOLDEN GATE. Flowers open almost pure gold but soon become richly rayed with orange-crimson. Tall grower. Green foliage.
FIREBIRD. Medium height. Deep red flowers; bright green foliage.

CLIMBING VINES
PURPLE WISTERIA. Flowers light purple and blue in early spring, borne in large drooping clusters. Well adapted for arbor plantings. Price, 2-year grafted plants, 40c each; $3.50 per 10.
WHITE WISTERIA. Resembles the purple variety, but with white flowers. Hardy and very desirable. Price, 2-year grafted plants, 40c each; $3.50 per 10.
CLEMATIS PANICULATA (Small Flowering Clematis). A great novelty from Japan. This variety of Clematis has proven to be one of the most desirable, useful and beautiful of hardy garden vines. Price, 2-year, 40c each; $3.00 for 10; $27.50 for 100.
CLEMATIS JACKMANI (Large Flowering Clematis). It is a strong grower, and produces a mass of intense violet-purple flowers 4 to 6 inches in diameter from July until October. 2-year, 70c each; $8.00 for 10; $35.00 per 100.
HALL'S JAPAN HONEYSUCKLE (L. Hulleana). A strong, vigorous vine with pure white flowers, changing to yellow; foliage remains green well into winter; very fragrant and covered with flowers almost the whole season. 2-year strong plants, 25c each; $2.00 for 10.
ENGLISH IVY, HEDERA HELIX. This popular evergreen vine with medium size dark green leaves is extensively used in this country for covering brick and stone walls and dwellings. 2-year, 30c each; $2.50 for 10.
B虚构 IVY. Foliage handsome in summer, changing to crimson-scarlet in autumn. Clings to walls and fences; fine for brick and stone. 2-year strong plants, 30c each; $2.50 for 10.
RUDUZI VINE. Large foliage and dense shade, growing 30 feet in one season. Flowers plentiful in August; rosy-purple, pea-shaped—in small racemes. Good porch vine wherever it is able to withstand the cold winters. 2-year, 35c each; $3.00 for 10.
SILVER LACE VINE. A quick growing climbing vine that can certainly be recommended for its thriftiness and beauty. The foliage is heavy, and it is literally covered with white, silvery blossoms from early August to fall. 50c each; $4.50 for 10.
FLOWERING SHRUBS

BEAUTIFY YOUR HOME AT LOW COST WITH BOUNTIFUL RIDGE FLOWERING SHRUBS

A PROFUSION OF BLOOM—SPRING—SUMMER—FALL.

TALL GROWING AND DWARF TYPES, SUITABLE FOR SPECIMEN OR GROUP PLANTINGS.

ALL ARE LISTED AT MONEY SAVING PRICES.

ALL SHRUBS ARE WELL BRANCHED 2 YR. FIELD GROWN STOCK, BLOOMING SIZE

In many cases it would be better to plant Shrubs in groups of several to one side of the lawn instead of following the method of planting one in a certain place and spoiling the effect of the open lawn. In most cases, three or twelve should be used in a particular grouping. Several such groupings make an excellent border or foundation planting.

ALTHEA (Rose of Sharon), Double assorted colors; red, white, lavender and blue. 2 to 3 feet, 30c each; 4 for $1.00.

BUTTERFLY BUSH (Buddlea)

One of our everblooming shrubs. These new types are truly magnificent.

CHARMING. Magnificent long panicles of Rose Pink flowers covering the plant from early to late in season. Flower clusters being 12 inches long. Very vigorous grower, good foliage and hardy in most sections. One of the best of the Buddleas of recent introduction. Heavy 2 yr. 2 to 3 ft. plants, 35c each; 3 for $1.25.

ILE DE FRANCE. The grandest of all purple types of Butterfly bush. Long tapering panicles, borne in great profusion through the summer. Dark Blue with golden stamens presents a gorgeous sight. Plants more spreading than Charming and foliage darker and grander. A magnificent plant in any setting. Heavy, 2 yr. 2 to 3 ft. plants, 35c each; 3 for $1.50.

BEAUTYBUSH. General resemblance to both Weigela and Honey-suckle, beautiful trumpet-shaped flowers. Pale pink with orange veins in the throat. 18 to 24 inch, 30c each; 4 for $1.75.

CREPE MYRTLE. Blooms throughout the summer great clusters of delicately fringed flowers. Perfectly hardy as far north as New Jersey. We have pink and red. 18 to 24 inch, 30c each; $1.75 for 4.

DEUTZIA (Pride of Rochester). Produces white flowers tinged with rose: vigorous grower, profuse bloomer, earliest to bloom. 18 to 24 inch, 30c each; $1.00 for 4; 2 to 3 ft. 40c each; $1.50 for 4.

DEUTZIA LEMOINE. Dwarf habit of growing. Literally covered with snow-white flowers. 18 to 24 inch, 10c each; $1.50 for 4.

FORSYTHIA—GOLDEN BELL

Their Golden bell shaped flowers usher in SPRING.

FORSYTHIA INTERMEDIA SPECTABILIS. Hardiest of all Forsythia. Known as shrub Forsythia. The Most profuse bloomer of all Forsythias, bush being covered with bright golden yellow flowers from base to tips of branches. Erect growth all branches drooping slightly. 2-3 feet, 35c each; 3 for $1.25.

FORTUNE'S GOLDEN BELL (Forsythia Fortunei). Flowers bright yellow and appear before the leaves very early in the spring. 2 to 3 feet bushes, 35c each; $1.75 for 4.

FORSYTHIA (Intermedia). Blooms early, frequently covered with golden flowers while the ground is still covered with snow. Not as tall as Fortune. 2 to 3 foot plants, 35c each; $1.25 for 4.

FORSYTHIA (Viridissima). Same habits as the Fortune. Flowers deeper yellow and somewhat twisted. 2 to 3 foot plants, 35c each; $1.25 for 4.

FLOWERING ALMOND. DOUBLE PINK (P. Jap. flos plena rosen). A beautiful tree; covered in May with rose-colored blossoms like small roses; hardy. 18 to 24 inch. 35c each; $1.50 for 4.

HONEYSUCKLE. PINK TARTARIAN (L. Tartarica rosea). Pink flowers that make a lovely contrast with the foliage. Fine 2 to 3 foot bushes, 35c each; $1.75 for 4.

HONEYSUCKLE, RED TARTARIAN (L. T. var. rubra). Blooms early in the spring; flowers a beautiful crimson. 2 to 3 foot plants, 35c each; $1.25 for 4.

EUROPEAN CRANBERRY BUSH. Handsome green foliage; large bunches of crimson berries throughout winter. The flowers are pure white. 2 to 3 ft., 30c each; $1.75 for 4.

JAPAN QUINCE. SCARLET (C. Japonica, also Pyrus Japonica). Flowers a bright scarlet crimson, borne in great profusion in early spring; foliage bright glossy green. 18 to 24 inch, 40c each; $1.50 for 4.

THE OLD FASHIONED LILACS

AND HYBRID LILACS

Beauty, Color Contrast and Exquisite Fragrance in Our Favorite Shrub.

CHARLES X (Hybrid). A hardy rugged grower with fine foliage. Large panicles of single reddish purple flowers, very fragrant. 18 to 24 inch, 30c each; 3 for $1.50.

LUDWIG SPAETH (Hybrid). Very hardy, thrifty and heavy blooming type. Plants medium size. Flowers single, dark purple. Very beautiful and fragrant. 18 to 24 inch, 30c each; 3 for $1.90.

MME. LEMOINE (Hybrid). One of the most appreciated white hybrid lilacs. Flowers are double and borne in large panicles, shading to a creamy white. Flowers very vigorous and hardy. 18 to 24 inch, 60c each; 3 for $1.50.

MRS. EDWARD HARDING (Hybrid). One of the rarest of our hybrid lilacs. Flowers almost pure red, very double and sweetly scented. Plants are profuse bloomers and very vigorous. 2 yr. 18 inch plants, $1.00 each; 3 for $2.70.

PRESIDENT LINCOLN (Hybrid). One of our outstanding hybrid lilacs. Blossoms delicate blush violet, single type. Plants bloom profusely and are hardy and vigorous. 2 yr. 18 inch plants, $1.00 each; 3 for $2.70.

LILAC. PRESIDENT GREY. Double, bright blue. 18 to 24 inch, 50c each; $1.75 for 4.

LILAC. WHITE (S. Vulgaris Alba). Too well known to need description; its flowers are white and fragrant. Fine 18 to 24 inch, 50c each; $1.75 for 4.

LILAC. PURPLE (S. Vulgaris). The well-known purple color variety; always a standard sort. Fine 2 to 3 feet, 40c each; $1.50 for 4.

LILAC. (Persian). A favorite among the purple lilacs having a rich color and unusually fragrant. 18 to 24 inch, 20c each; $1.50 for 4.
HYDRANGEA

Varied colors and types in this desirable shrub.

OAK LEAF HYDRANGEA. One of the best of the newer types of Hydrangeas. Upright to drooping in growth, attractive foliage. Blossoms are compact, large varieties similar to hydrangeas on shrub until September. Flowers changing in color from white to pink. A beautiful plant that you will enjoy. 2 to 3 ft. plants, 60c each; for $2.25.

HYDRANGEA ARBORESCENS STERILIS (Hills of Snow). Handsome foliage and snow white, ball-shaped clusters of flowers. Blooms the greater part of summer. 18 to 24 inch, 40c each; $1.50 for 4.

HYDRANGEA Paniculata Grandiflora. A shrub; flowers borne in large panicles; light pink; changing to brown later in the fall; blooms in August and September. 18 to 24 inch, 40c each; $1.50 for 4.

HYDRANGEA OTAKA. Flowers generally blue, with a few exceptions, when they are a delicate pink. A Japanese variety, 2-year, No. 1 plants, 75c each; $2.75 for 4.

PEARL BUSH (Exochorda Grandiflora). One of our grandest early white flowering shrubs; blossom and leaf buds breaking forth at same time the bush is completely covered with white blossoms resembling mock orange. Plant is very hardy and easy to grow. Blooming at same time as Forsythia its blossoms make a contrast combination. 24 inch, 35c each; $3.00 for 10.

SPIREA ANTHONY WATERER. Very popular low-growing bush, blooms all summer. Flower deep rose to 12 to 18 inch, 40c each; $1.50 for 4.

SPIREA VAN HOUTTE (S. Van Houtte). This is the most popular of all the Spiraeas. Its gracefully arching branches heaped as they are with the white blossoms in spring and its thriftiness under the most trying conditions are the reasons for its popularity. 18 to 24 inch, 20c each; $1.50 for 10; $10.00 for 100; $50.00 for 1000; 2 to 3 feet, 30c each; $1.00 for 4.

SWEET SCENTED SHRUB or CALYCANTHUS. Desirable shrub. Wood is scented, the foliage rich, and flowers of a rare chocolate color, having a pungent and delightful odor. The old fashioned shrub that was used to be in every yard. 2 to 3 feet, 50c each; $1.75 for 4.

MOCK ORANGE

Dainty, exquisite beauty of flower and plant.

PHILADELPHUS, Grandiflora (Mock Orange). Large spreading bush, graceful drooping branches; flowers slightly fragrant. 2 to 3 feet, 40c each; $1.50 for 4.

PHILADELPHUS, Virginiensis. Finest of all Mock Orange. Very large, white, fragrant flowers, blooms throughout the summer. 2 to 3 feet, 50c each; $1.75 for 4.

PHILADELPHUS, Coronarius (Mock Orange). Pure white, very fragrant flowers; one of the first to bloom. 2 to 3 feet, 40c each; $1.50 for 4.

TAMARIX AFRICANA. Upright habit, with airy, slender leaves and a profusion of dainty, soft pink flowers in May. 1½ to 2 feet, 30c each; $1.25 for 4.

GARDENIA SCENTED SNOWBALL

(Viburnum Burwoodi)

Most Outstanding Shrub Introduction in Recent Years

New — Fragrant — Hardy

Waxy pinkish white flowers. Semi-evergreen. Brilliant autumn foliage. Here is an improved Viburnum Carlesii as fragrant as Carlesii, but blooms one to two weeks earlier. Flower heads up to four inches wide and 100 to 150 individual flowers. Semi-evergreen—but still hardy and vigorous, growing 5 to 6 feet high. Brilliant fall coloring when grown in dry locations. Be the first to grow this new variety in your vicinity. 15 to 18 inch heavy, $1.50 each; 3 for $4.90; 18 to 24 inch, $1.75 each 3 for $4.75.

SNOWBALL COMMON. The old-fashioned Snowball; pure white flowers are produced in May and June. Fine 2 to 3 ft., 50c each; $1.75 for 4.

JAPANESE SNOWBALL. Pure white blossoms, with heavy dark leaves; shows up remarkably well, when planted as a specimen or in a shrub group. 18 to 24 inch, 60c each; 4 for $2.25.

WEIGELA

The most graceful and floriferous of shrubs, a plant of beauty wherever placed.

WEIGELA EVA RATHKE. Flowers a brilliant crimson; a beautiful clear, distinct shade. 18 to 24 inch bush, 45c each; $1.60 for 4.

WEIGELA ROSEA. An elegant variety with fine rose-colored flowers appearing in June. 18 to 24 inch, 35c each; $1.25 for 4.

WEIGELA VAN HOUTTEI. A selected form of the Rosa, having deep rosy red blossoms borne in great profusion. Weeping and graceful habit of growth. A very beautiful type Weigela. 18-24 inch, 40c each; 3 for $1.00.

The Rare “FRANKLINIA”

Beautiful blooms and blaz ing fall foliage bring beauty to any planting. Flowers start opening in Mid-August and continue to open until hard frost. The flower buds appear like small balls covered with whitish-green satin; when as large as marbles they unfold; the guard petals emerge, satiny, snow-white, elaborately frilled and pleated. The snowy, frilly chalices, 3 inches in diameter and of gisant irregularity, holds a sumptuous mass of the rich orange golden stamen having a delicate balsam fragrance. The young leaves unfold a charming, delicate, 50-leafed at maturity they are 5 to 6 inches long by about one-third as wide, a rich dark green with red veining. In Autumn the whole tree blazes a rich warm color. Produces a beautiful effect in any ornamental planting. 12 to 18 inches $1.25 each; 3 for $3.75; 18 to 24 inches, $1.60 each; 3 for $4.50.
Japanese Flowering Cherry

THE BEAUTY TREE OF AMERICA

TODAY

Our Flowering Cherry Are Well Branched
Blooming Size Trees

KWANZAN. Large, double, pink blossoms borne in profusion. One of the best and worth its growth. $1.00 each.

AMANAGAWA. Large double blossom, not so intense pink as Kwanza; forms a beautiful trees and should be in every collection. $2.50 each.

MT. FUGI. Without a doubt the very best white flowering cherry. We have never seen such clusters of snow-white double blossoms as this tree bears in the spring. Dwarf, tree upright, blossoms borne in clusters when in bloom. Large 2-year, 6-foot trees, $2.00 each.

NADEN. Large pale pink flowers, being very double. Tree upright and spreading; presents a most beautiful sight when in bloom. 2-year, 6-foot trees, $2.00 each.

KOFUGEN. One of the most profuse blooming flowering cherry. Flowers are very large and very double, sometimes being almost pure red. Tree vigorous, spreading. Should be in every planting if you wish real beauty. 2-year, 6-foot trees, $2.25 each.

OTHER DESIRABLE FLOWERING AND ORNAMENTAL TREES AND SHRUBS

THE GORGEOUS FLOWERING DOGWOODS

DOGWOOD, WHITE FLOWERING (Cornus Florida). Large white flowers appear in the spring before the leaves. Scarlet fruits are borne in the autumn and the leaves turn to a deep red. 3 to 4 ft., 75c each; $6.00 for 10; 4 to 5 ft., $1.00 each; $9.00 for 10.

DOGWOOD (Pink Flowering). A colored form of the native species Dogwood. Some habits of growth differ from the pink flowered tree. $1.00 each; 2 to 3 feet, $1.50 each; $13.50 for 10; 3 to 4 feet, $2.00 each; $18.50 for 10.

DOUBLE FLOWERING PEACH. During early spring, flowers almost completely envelop the limbs of this beautiful flowering tree. The flowers are very double, almost like a small rose and present a striking appearance. Trees are hardy anywhere peaches can be grown. Can be supplied in double red, double white and pink. 3 feet sturdy trees, well branched, 65c each; $1.75 for 10.

PAULS SCARLET THORN. The grandest and most floriferous of all the Hawthornes. The rich brilliant double solitary flowers presents striking appearance during the early spring. These combined with the healthy vigorous habits of the tree, being very hard, make it one of the most beautiful 3-6 feet trees well branched, $1.50 each; $3.00 for 4.

PURPLE AND RED LEAVED TREES

JAPANESE BLOOD LEAF MAPLE. We offer this rare and beautiful tree in grafted stock. A good dwarf tree with rich purplish-red leaves. All plants are selected to type. 18 to 24 inch, $1.75 each; 3 for $4.50.

PRUNUS PISSARDI (Purple-Leaved). Leaves when young are a lustrous crimson, changing to dark purplish and retain this beautiful tint until they drop in the autumn; no other purple-leaved tree retains its color so long. This ornamental tree bears small, white, single, covering the tree. 5 to 6 feet, 75c each; $6.00 for 10.

PURPLE-LEAFED JAPANESE MAPLE. A selected variation of the Red Leaf Japanese Maple, with leaves slightly larger and heavier. The foliage gives a darker red appearance throughout the year than the Red Leaf Japanese Maple. Those desiring real contrast of coloring in ornamental planting should try this. 12-15 inch plants, $1.00 each; 3 for $2.75.
SHADE TREES

We give special prices for street and park planting using twenty trees or more. Write to us, giving quantities and grades desired.

SWEET GUM. Sometimes called the Star tree, because its leaves are shaped similarly to a star. Develops into a beautiful symmetrically shaped tree. The forked-ridged bark of the branches and larger limbs, present a unique appearance. Leaves are bright green changing to a pleasing tone of crimson in the autumn. A shade tree you will appreciate. 3-6 feet, $1.00 each; 3 for $2.50; 6-8 feet, $1.50 each; 3 for $4.00; 8-10 feet, $2.00 each.

CHINESE ELM. Tree upright, extreme end of branches drooping. Very dense, making good shade. Fast growing and resistant to drought and cold. 5 to 6 feet, 75c each; 6 to 8 feet, $1.00 each; $0.90 for 10; 8 to 10 feet, $1.50 each.

ELM, AMERICAN WHITE (U. Americana). A magnificent tree growing 80 to 100 feet high with drooping, spreading branches. 8 to 10 feet, $1.50 each; 6 to 8 feet, $1.00 each; $0.90 for 10.

BIRCH WHITE (Betula Alba). Erect growing. Branches slightly drooping and attractive bark which is almost white. 6 to 8 feet, $1.25 each; $1.00 for 10; 4 to 6 ft., 90c each; $7.50 for 10.

MULBERRY, NEW AMERICAN. Large fruit; black; delicious flavor; very attractive lawn tree. 6 to 8 feet, $1.00 each.

MAPLE, NORWAY (A. Platanoides). A large, handsome tree, with broad, deep green foliage; has a very compact growth. A valuable tree for parks, lawns or streets. 6 to 8 feet, $1.50 each; $1.00 for 10; 8 to 10 feet, $1.50 each; $1.00 for 10; 10 to 12 feet, $2.50 each; 12 to 14 feet, $3.50 each.

MAPLE, SILVER-LEAVED or SOFT (A. Siebercarpum). A rapid growing large of size, irregular, rounded form; foliage bright green above and silver beneath; a favorite street and park tree. 6 to 8 feet, 75c each; 8 to 10 feet, $1.00 each; 10 to 12 feet, $1.25 each; $10.00 for 10; 12 to 14 feet, $1.50 each; 14 to 16 feet, $2.00 each.

MAPLE, SUGAR OR HARD (A. Saccharum). A well-known native tree valuable both for the production of sugar and wood; very desirable. 8 to 10 feet, $1.50 each; 10 to 12 feet, $2.00 each; 6 to 8 feet, $1.25 each.

SCHWEDLER’S PURPLE LEAVED MAPLE. Probably our best, large growing purple leaved tree of the sugar maple type. 6 to 8 feet, $2.00 each; $17.50 for 10.

ORIENTAL PLANE or EUROPEAN Sycamore (P. Orientalis). A rapid-growing, erect tree with bright green foliage; much more esteemed than the American variety as a shade tree, very desirable for parks, streets and lawns. 6 to 8 feet, $1.00 each; 8 to 10 feet, $1.50 each; $12.50 for 10.

PLANTER, LOMBARDY. Grows to immense height. Used for roadside planting or to break the monotony of low, round-top trees. Also beautiful as a screen or windbreak. 6 to 8 feet, 75c each; 4 to 6 feet, 59c each; $4.00 for 10; $30.00 for 100.

TULIP TREE (L. Tulipfera). A magnificent rapid-growing tree with light green, glossy fiddle-shaped leaves and greenish-yellow, tulip-shaped flowers. 8 to 10 feet, $1.00 each; 6 to 8 feet, $1.25 each.

Low-Priced Small Size Shade Trees

These well rooted straight trees mostly whips with few branches will grow and develop rapidly into fine shade trees and offer you a chance to have an abundance of shade about your home at an Extremely low cost.

Order trees in quantities offered of each variety.

CORKSCREW POPLAR. A rare unusual tree. All the grace and beauty of the old Willow with the limbs and twigs twisted in a spiral or corkscrew fashion, giving tree a striking effect. 3-4 foot, 40c each; 3 for $1.00; 6 for $1.75.

BABYLONIAN WEEPING WILLOW. The well known common weeping willow, known in all sections. 3-4 foot, 25c each; 3 for 90c; 6 for $1.00.

SILVER LEAVED MAPLE. The old standby in rapid growing shade trees in many sections. 4-5 feet light, 30c each; 5 for $1.25; 10 for $2.00.

Weeping Ornamental Trees

TEA’S WEEPING MULBERRY (Morus Tartarica Pendula). A graceful hardy tree, forming an umbrella-shaped head, with willowy branches drooping to the ground; foliage small, lobed, and fresh, glossy green. First-class 2-year heads, 5 to 6 foot stems, $2.25 each; $20.00 for 10.

WEEPING WILLOW, WISCONSIN. The well known common weeping willow; makes a large tree covered with drooping branches. 6 to 8 ft., $1.00 each; $9.00 for 10.

CUT LEAF WEEPING BIRCH. One of the most beautiful weeping trees now offered. Pyramidal in growth habit. Dark green leaves and shiny white bark. 6 to 8 foot trees, $1.75 each; $16.00 for 10; 5 to 6 ft., $1.50 each; $14.00 for 10.

Pleased.

Aberdeen, N. C., February 7, 1939

Gentlemen:

Trees arrived in good condition. Thanks for the extras.

George S. Procter

THANKS FOR PROMPT SHIPMENT

Altoona, Pa., April 8, 1939

Dear Sirs:

Received trees all O. K., April 6. They are nice trees, all that can be expected. Thanks for prompt shipment and for one extra tree.

J. K. Long
Hardy Evergreens

Plants Listed in This Group Shipped with Ball of Earth

ARBORITAE (American). Very hardy, grows rapidly, forms a beautiful hedge, very dense. 3 to 4 feet, $1.50 each; 2 to 3 feet, $1.25 each.

JUNIPER. Very erect forming a natural dense column, deep blue-green foliage. 12-15 inch plants, 45c each; 3 for $1.10.

SAVIN JUNIPER. Rich dark green spreading type Juniper, a little more upright than the Pfitzeriana. 6-8 inch plants, 45c each; 3 for $1.00.

SPEWART JUNIPER. Favorite of all spreading Junipers. Very hardy, beautiful silvery blue-green foliage. 6-8 inch, 50c each; 3 for $1.25.

TAXUS BACCATA HIBERNICA (Irish Yew). One of the most desirable evergreens, columnar habit. Very compact, upright branches, leaves radially arranged around the branches. Dark rich glossy green. 18-21 inch plants $3.00 each; 3 for $5.00; 21-24 inch plants, $3.50 each; 3 for $9.35.

TAXUS BACCATA REPANDENS. A low spreading form of the English Yew. Dark bluish green, narrow and long leaves. One of the best spreading forms of the Yew being almost as hardy as the Cupidata and holds its color much better. 15 to 18 inch, $1.65 each; 3 for $4.95.
Broad-Leaved Evergreens

ABELIA OR BUSH ARBUTUS

ABELIA GRANDIFLORA. Foliage dark green, glossy, its rich coloring brilliant, occasioned by the Extended period from May until Frost this plant is covered with pinkish-white bell-shaped flowers. 18 to 24 in. 60c each; 6 at $1.50 each; $7.50 per dozen.

ABELIA (EDWARD GOUCHER). This grand PINK FLOWERED Abelica can be appreciated by those who know the beauty of the Abelia Grandiflora. The flowers are about twice the size of Grandiflora and appear as a clear mayflower-pink which is darkest on the back of flower petals. Flowers have yellow mottling within the throat. The young shoots are quite reddish color, leaves glossy green. Begins flowering late, leaves a multitude into the summer. Bushy 6-12 inch plants, $1.00 each; $8.00 for 10.

THE BEAUTIFUL RHODODENDRONS

RHODODENDRON CAROLINA (Carolianum). This hardy Rhododendron with clear, pink flowers borne in great masses is the first of the Rhododendrons to bloom. Heavy plants, 2 to 3 feet, $2.50 each.

RHODODENDRON CATAWBA (Catawbiense). Medium, large-growing Rhododendron and very hardy. Valuable for Foundation work in shady places. Followed by brilliant large clusters of rose lavender flowers. Heavy plants, 2 to 3 feet, $2.00 each.

RHODODENDRON ROSEBAY (Maximum). The favorite of the Azalea growers. Large clusters of flowers borne in great profusion late in the spring. Large, dark green foliage is unusually attractive. Grows more compact than other Rhododendrons; extremely hardy. 2 to 3 feet, $2.00 each.

XANDINA DOMESTICA (Heavenly Bamboo). A very showy shrub of medium height with large clusters of small red berries in the autumn. Its dark green foliage is occasioned by a beautiful orange or crimson color in winter. Thrives well in any well-drained, loamy soil, and is very hardy. One of the plants which is used in all the better class of landscape work. 18-24 inch, $1.25 each.

AMERICAN HOLLY. The Christmas Holly. Its bright spiny scarlet colored berries make it one of the handsomest evergreen shade trees. 2 to 3 feet, $1.75 each; 3 to 4 feet, $2.25 each; 4 to 5 ft., $3.50 each; 5 to 6 feet, $4.00 each.

JAPANESE HOLLY (Ilex Crenata). Evergreen; stubby, twig-like branches with boxwood-like leaves of pleasant dark green color. Small black berries. Rarely gets more than five feet tall. 3 to 4 feet, $2.50 each.

SCOTCH BROOM. A most pleasing and attractive shrub. The bright green of the trunk and branches makes it a very pleasing addition to any garden. 2 to 3 feet, $1.00 each.

DECIDUOUS AZALEAS

KURUMES. (Damask Rose). This is a rare and very beautiful plant of the deciduous azalea. Its large white flowers with pale scarlet centers borne in great profusion is greatly admired. Combine this with our Calendulaeae for contrast and beauty. Well branched. 8 to 12 inch plants, 60c each; 3 for $1.50.

CALENDULAECAE (Flame Azalea). The Great Flame Azalea of the Southern Mountains. The blossoms range from flame color through shades of red and yellow, remembaring Azaleas for many weeks. Very hard and a profuse bloomer, thrives in partial shade and a plant of beauty among Evergreens. Rhododendrons and shrub borders. 18-24 inch well branched plants, $1.00 each; 3 for $2.75.

LEDIFOLIA ALBA. Possibly the best of all White Deciduous Azaleas. Flowers very large and pure white. Plants are thrifty and very hardy. Its brilliant white flowers are borne in great profusion. Well branched 10-12 inch plants, $1.00 each; 3 for $2.75.

HOW TO PLANT EVERGREENS

1) Dig a hole large and deeper than ball of earth Provide good, loamy top soil to fill around ball.

2) Set tree in hole triple lower than it stood in nursery.

3) Fill good top soil up around bottom of tree, fill back in from four sides, with feet or set tile by filling hole with water.

4) Loosen burlap at top of ball and roll back or cut off.

5) Fill hole with soil pack firmly and leave top of ground covered with loose earth or better mulch with strawy well rotted manure.
GENERAL HINTS ON PLANTING DISTANCE, ETC.

Distance for Planting—Square Method

Distances for planting different kinds of fruit trees, etc., square method.

Peach. 16 to 20 feet apart each way.

How to Order From Bountiful Ridge Nurseries... All Prices Listed in This Catalog Are Net, No Discount Allowed And For the Stock F. O. B. Princess Anne, Md. Delivered Prices Will Be Given on Any Stock Wanted If You Will Write to Us Giving a List of The Stock With Sizes Wanted. These Prices Are For the Spring Shipping Season of 1941 Only and Are Subject to Change After June 1st, 1941.

OUR SHIPPING SEASON

We pack and ship all through the winter to Southern States. Our regular spring shipping and packing season usually opens here about the 15th of February and continues until May 10th. Our fall shipping season opens about October 15th and continues to Northern points until December 1st.

OUR TERMS

Our terms are cash except in large orders when satisfactory reference is given; then one-third the amount of the order must be sent and balance on arrival of trees at depot. On early orders one-third the amount can be sent in and balance a few days before shipment. Prices in this catalog are for the present season, spring of 1941 only.

HOW TO REMIT

Remittance should be made either by Post Office money order, registered letter, or by check on your bank.

ORDER EARLY

We earnestly request our patrons to send their orders in plenty early so that when they wish them shipped, we pride ourselves on making prompt delivery but sometimes in our rush seasons we cannot get the orders shipped on the exact time, and we must ask our customers indulgence for a week or so and shipment will be made just as promptly as possible. If time of shipment is very important, we can arrange to air-mail your trees, if ordered in advance.

MISTAKES

We use every precaution that is humanly possible to avoid mistakes and believe that we are as near free from them as any Nurseryman in the United States; but in the event any of our stock should prove untrue to name under which it is labeled or sold, we will replace the original order or refund the cost of such stock. Further than this we are not responsible.

OUR GUARANTEE

We guarantee every tree to be as represented in grade and quality, and if upon arrival you do not find our trees to be exactly as we say they are, return them to us securely packed and we will refund to you every dollar you have paid us for them. This is as fair as we can offer.

Do not confuse our well graded stock with stock offered to you at a lower price with only height mentioned. Our stock is graded both in height and thickness, the only true way to grade nursery stock.

RECEIVING STOCK IN COLD WEATHER

In the event that it should turn cold after your stock has been shipped to you and there is a possibility that there is frost in the box in which the stock is shipped, put the box in a place where the temperature is above freezing—a cellar or a frost-proof building, and do not disturb for 5 to 7 days, at which time stock can be removed from the box in first-class condition. Under no circumstances should you open a box when you think there is frost in it, for if the air strikes nursery stock in frozen condition, it will kill it. But if allowed to thaw out in the box, the stock will not be injured.

OUR REFERENCES

As to our responsibility, we refer you to the Salisbury National Bank, Salisbury, Md., Farmers & Merchants Bank, Salisbury, Md., and to any of our thousands of customers throughout the country that you might know or whose name you find in this catalog with the various State Departments in the Eastern U. S.

PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE ORDERING

Write to us if in doubt.

CERTIFICATE OF INSPECTION—DUPLICATE OF NUMBER 23

Sept. 18, 1940

THIS IS TO CERTIFY, That on the 14th day of August, 1940 we examined the Nursery Stock of the Bountiful Ridge Nurseries, growing in their nurseries at Princess Anne, County of Somerset, State of Maryland, in accordance with the laws of Maryland, 1938, Chapter 286, Sections 6 and 7. Said nursery and premises are apparently free, so far as can be determined by inspection, from the San Jose Scale, Peach Yellow, Pear Blight and other dangerously injurious insect pests and plant diseases.

C. E. TEMPLE, State Pathologist
ERNEST N. CORY, State Entomologist

G. S. LANGFORD, Chief Inspector

In addition to the above Certificate every shipment going outside the infested area of the Japanese Beetle has a certificate of the U. S. Department of Agriculture showing the shipment is free from Japanese Beetle.
